I. High Seas Drift Net Enforcement

Operation North Pacific Guard 2010, the USCG's North Pacific high seas fisheries enforcement plan, commenced in April with a HC-130 deployment out of Shemya Island, Alaska. USCG Cutter JARVIS commenced deployment their in August. The Canadian Air Force and Department of Fisheries and Oceans also made an extended CP-140 deployment from Shemya Island, Alaska. During this deployment the CP-140 provided air support to the USCG Cutter JARVIS with real time sighting reports of fishing fleet activity. In addition, Japanese

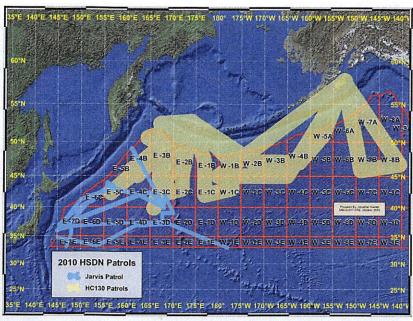

Figure 1. 2010 Cutter & Aircraft HSDN Patrols

Coast Guard aircraft patrolled the Convention Area and coordinated surveillance efforts with the USCG Cutter JARVIS. USCG aircraft flew a total of 122 dedicated mission hours this year, with 76 hours directly surveying the convention area. The USCG cutter JARVIS conducted a 105-day patrol (45 patrol days in the Convention Area) in direct support of Operation North Pacific Guard, completing operations on 26 October 2010. There was one HSDN vessel sighted by the USCG in 2010, but no HSDN vessels were boarded or seized.

The USCG Cutter JARVIS participated in a multi-national IUU fisheries enforcement patrol, which included enforcement coordination with NPAFC parties and the People's Republic of China - Fisheries Law Enforcement Command (FLEC). The JARVIS had many foreign engagement obligations during their patrol, and experienced one short delay due to mechanical issues. JARVIS conducted port calls in Yokosuka and Hokadate, Japan, as well as in Vladivostok and Petropavlovsk-Kamchatka, Russia. JARVIS embarked Chinese FLEC enforcement officers, and also conducted a professional exchange and a 3-day joint patrol with two FLEC patrol vessels within the Convention Area. The Japanese Coast Guard conducted two joint Gulfstream-V (G5) flights coincidental with JARVIS' patrol of the high-threat area. The USCG Seventeenth District sent an officer to Tokyo to participate in both flights as an observer. These flights continued joint U.S.-Japanese HSDN aircraft patrol operations (the first was in 2006) and, as has been the case in the past, sighted several fishing vessels, none of which were configured for large-scale high seas driftnet fishing. There were a total of 02 HSDN vessels detected in the North Pacific during 2010; the Cambodian *ARVID* sighted by the USCG in April 2010, and the stateless *URAL 1* sighted and seized by a People's Republic of China patrol vessel in August 2010.

Seventeenth District representatives met with the members of the North Pacific Anadromous Fish Commission at the commission's 18th annual meeting in Busan, Korea. The Coast Guard reported on their successes, challenges met, and 2010 joint efforts to deter high seas driftnet and illegal, unreported and unregulated fishing activities in the North Pacific. The other participants also reported their respective efforts and collectively discussed enforcement plans for 2011.

II. US/Russian Maritime Boundary Line (MBL) Enforcement

The Russian pollock season was open throughout the period with no incursions detected. Fishing pressure along the MBL remained consistently low for 2010, and there is no indication that the downward trends seen in recent years will change. CGC SHERMAN patrolled the line from 22–26 October, and a Coast Guard HC-130s flew 19 hours patrolling the MBL.

III. Donut Hole Activity

There has been no activity since two Korean vessels conducted trial fishing in 2007. There have been no specific trial fishing plans indicated from any of the signatories to the Convention on the Conservation and Management of the Pollock Resources in the Central Bering Sea.

IV. Bering Sea Crab Fisheries

The Coast Guard's pre-season training and safety inspection efforts for the 2010 Red King Crab fishery were similar to that of last year. Dockside prevention activities were focused in Unalaska (Dutch Harbor), King Cove, and Kodiak prior to the October 15th opening. During this period, 63 Safety and Stability Compliance Checks (SCCs) were conducted and training on safety equipment and damage control was offered. An Air Station Kodiak HH-60 helo was forward

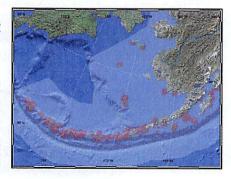

deployed to Cold Bay with USCG cutter SHERMAN and USCG cutter ALEX HALEY providing Bering Sea patrol coverage. Each cutter carried an HH-65 Helicopter, and when weather conditions would prevent underway launch of the aircraft, the helo was stationed ashore to enable its continued use.

The USCG continued coordinated enforcement planning with NOAA enforcement, Alaska Department of Fish and Game, and the Alaska Wildlife Troopers via weekly conference calls and by a shared database of fishing vessels that had been boarded at-sea or had offloads monitored. The combination of pre-season SCCs and at-sea boarding efforts (16 boardings) resulted in more than 97% of the crab fleet being contacted by Coast Guard assets. Only one vessel without a SCC was missed by boarding efforts either dockside or at sea.

V. Steller Sea Lions and Critical Habitat Enforcement

The USCG continues to enforce NMFS management regulations to ensure current groundfish fisheries are not adversely affecting Steller Sea Lions or impeding their recovery. The USCG does this through numerous surface and aviation patrols of Steller Sea Lion Critical Habitat

Areas. Cutters monitored critical habitats for 1254 hours, and aircraft flew weekly flights in support of this mission. There were no violations observed.

VI. Commercial Fishing Vessel Boarding Statistics

At-sea domestic fisheries and commercial fishing vessel safety boarding numbers for the reporting period were up 21% with 99 boardings, vice 78 reported last year. These boardings resulted in a total of 16 vessels with safety violations and seven vessels with fisheries violations, three of which were significant. Significant violations involved one vessel fishing without a Vessel Monitoring System unit on board, one vessel failing to meet observer coverage requirements, and one vessel fishing for halibut after the closure of the season. Figures 4 and 5 show the historic trend for boardings and violations.

Figure 1. Fisheries Boardings By Year

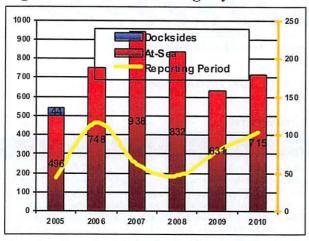

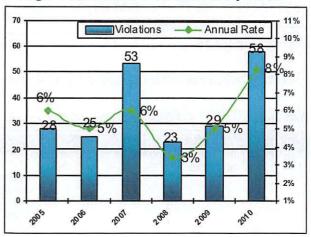

Figure 2. Fisheries Violations By Year

The fisheries violation rate (7%) fell back considerably from the spike observed over the same period last year (19%), most of which were boarding ladder violations. The overall violation rate, however, continued to climb from the 2008 low of just over 3%. *(Figure 2) Appendices A and B contain a complete list of boardings and violations.

OCT 2009 - NOV 2009	OCT
F/V Boardings (at sea):79	F/V E
Boarding w/fisheries violations:14	Board
Violation Rate:	.0% Viola

OCT 2010 - NOV 2010	
F/V Boardings (at sea):	99
Boarding w/fisheries violations:	7
Violation Rate:	7%

VII. IFQ Enforcement

Coast Guard IFQ enforcement effort consisted of 20 at-sea boardings during the period. The IFQ halibut and sablefish fisheries closed on 15 November, and during an aircraft patrol, one fishing vessel was detected fishing after the closure. The case is currently being investigated by NMFS. Enforcement efforts for this fishery will resume in March.

VIII. Commercial Fishing Vessel Safety/Search and Rescue Cases

There were ten vessels found to have safety violations. violations consisted of expired visual distress signals, expired **EPIRB** registrations, and insufficient fire fighting equipment. There were two search and rescue cases during the reporting period, including helo one basket-hoist MEDEVAC. The operational summary of the reporting period (01 October to 30 November) tallied zero lives lost, one life saved (Figure 3).

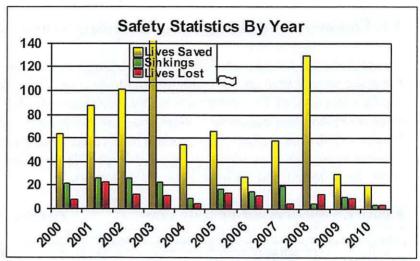

Figure 3. Historical Overview of CFVS Statistics

Table 1 (below) provides a summary of significant search and rescue cases.

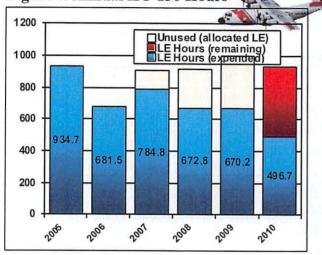

Table 1. CGD17 CFVS/Search and Rescue Case Summaries

Date	Vessel Name	РОВ	POB Death VSL Loss Circumstances/Specific Cause			
11/09/10	Cape Reliant	NA	N	N	USCGC ALEX HALEY relayed a MEDEVAC request to D17 Command Center reporting that a 26-year-old, male crewmember on board the F/V CAPE RELIANT had slipped on deck and sustained a head injury on the edge of a fish hold. The crewmember was reported to be semi-conscious, vomited within 90 seconds of hitting his head, and was being treated for shock by the ship's crew. The ALEX HALEY diverted toward the position of the CAPE RELIANT (approximately 5nm away), and launched cutter's smallboat with medical personnel on board to assess the crewmember. The flight surgeon recommended MEDEVAC based on the initial on-scene assessment. An Air Station Kodiak HH-60 helo launched from Cold Bay, hoisted the patient and ALEX HALEY corpsman from vessel, and transported them to Dutch Harbor. The patient was transferred to the clinic in Dutch Harbor and flown to Anchorage via commercial transportation.	
10/11/10	Flying Ocean	3	N	N	The F/V FLYING OCEAN contacted Sector Anchorage Command Center reported that the vessel was disabled due to a loss of rudder control in Shelikof Strait with several good Samaritans enroute. Roughly 30 minutes later for unknown reasons the Good Samaritans reported that they were unable to provide assistance. Sector Anchorage recalled the USCGC ROANOKE ISLAND to get underway, travel the 160nm to the vessel and tow it to safe harbor. The F/V HALFMOON BAY responded before the ROANOKE ISLAND was underway and Sector Anchorage stood down the asset. The Good Samaritan was able to tow the F/V FLYING OCEAN to Kupreanof Straight, where the F/V FLYING OCEAN anchored awaiting tug service from Kodiak. The vessel was safely towed into Kodiak by tug services.	

IX. Coast Guard Resource Summary

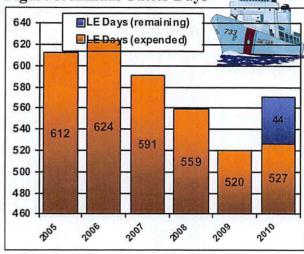

Figures 4 and 5 show the historical and projected *annual* HC-130 aircraft law enforcement hours and Medium and High Endurance Cutter days used in the Seventeenth District. Figures 6 and 7 show the same information over the last six years for the *reporting period only*.
