Corrections to the text of **D2 (SSC Review) Overcompensation analysis**:

1. The maximum $\Delta WAIC$ among alternative stock-recruitment models for Kenai River late-run sockeye salmon stock should be listed as 4.27, not 3.31, throughout the text.
2. In the description of the Autoregressive Ricker model (Page 5) the text indicates "…maximum productivity is equal to α and not $ln(\alpha)$.", but should be "…maximum productivity is equal to α and not $exp(\alpha)$.".
3. In the description of the Deriso-Schnute model (Page 6), the text indicates "… while if c = 0 it …", but should be "… while as c approaches 0 it …".
