

Appendix C7

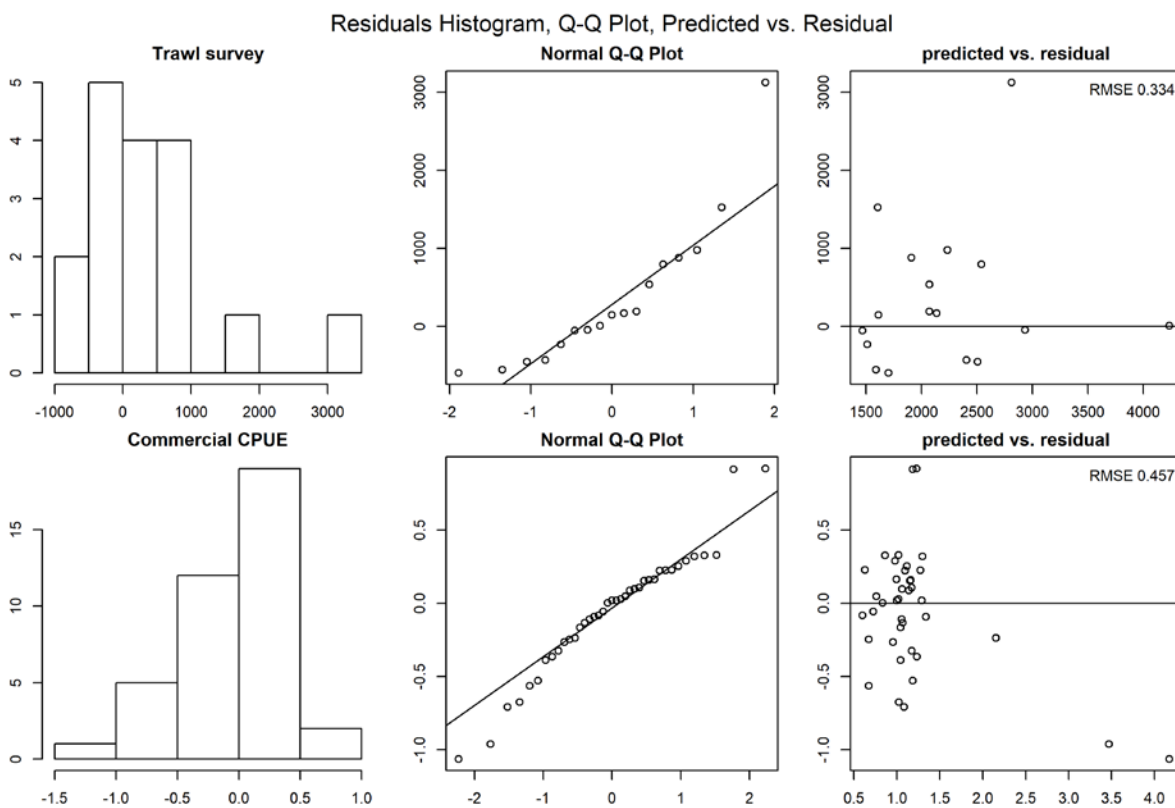

Figure C7-1. QQ Plot of Trawl survey and Commercial CPUE.

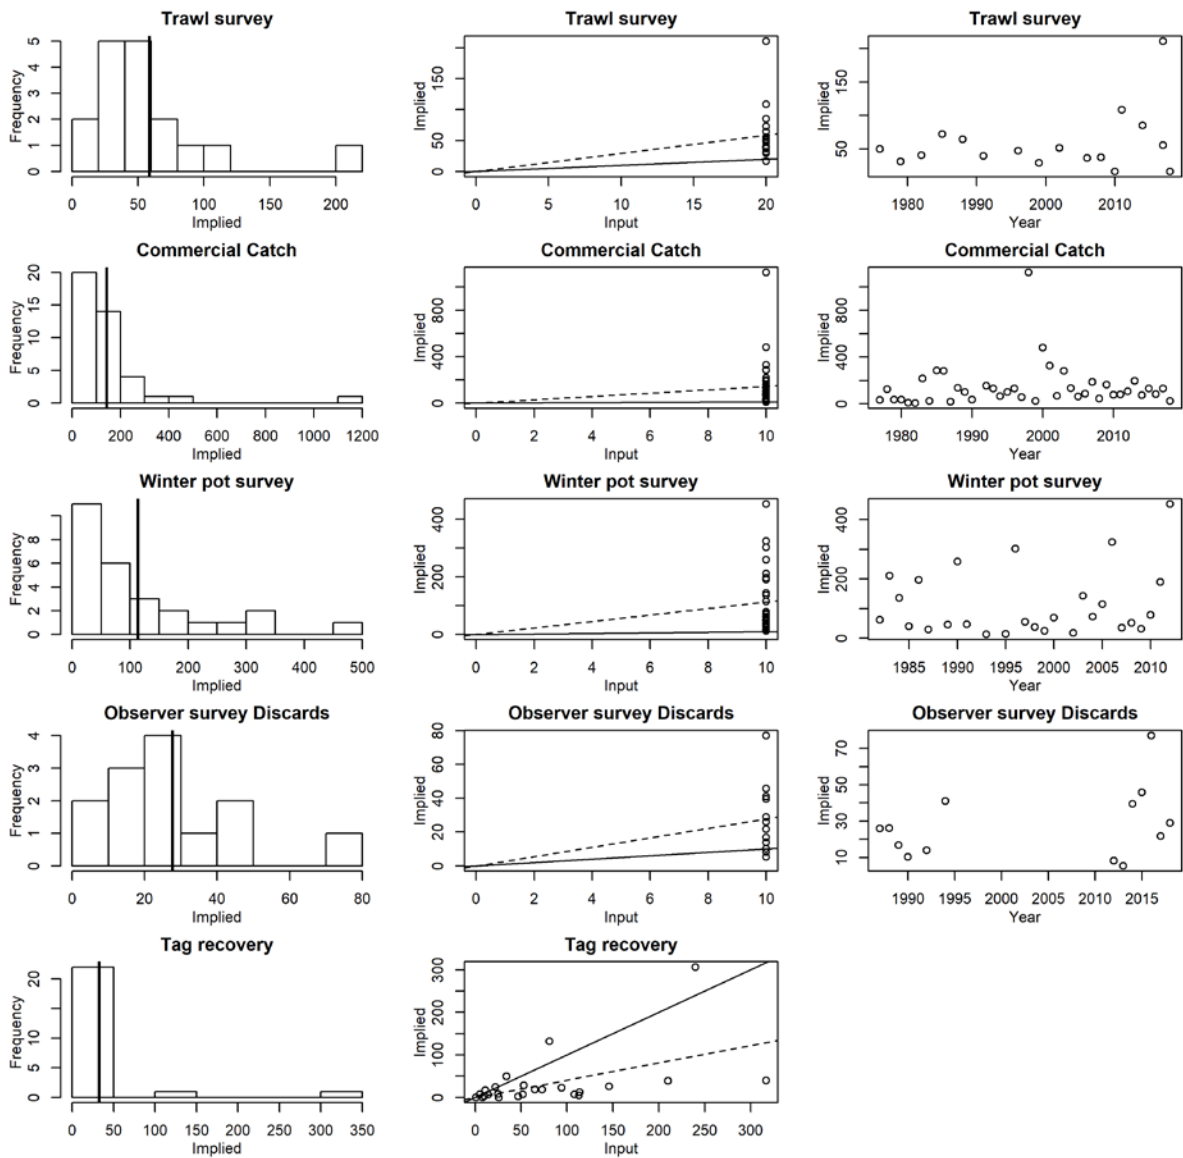

Figure C7-2: Implied effective samples. Figures in the first column show implied effective sample size (x-axis) vs. frequency (y-axis). Vertical solid line is the mean implied effective sample size. The second column show input sample size (x-axis) vs. implied effective sample size (y-axis). Dashed line indicates linear regression slope, and solid line is 1:1 line. The third column show year (x-axis) vs. implied effective sample size (y-axis).

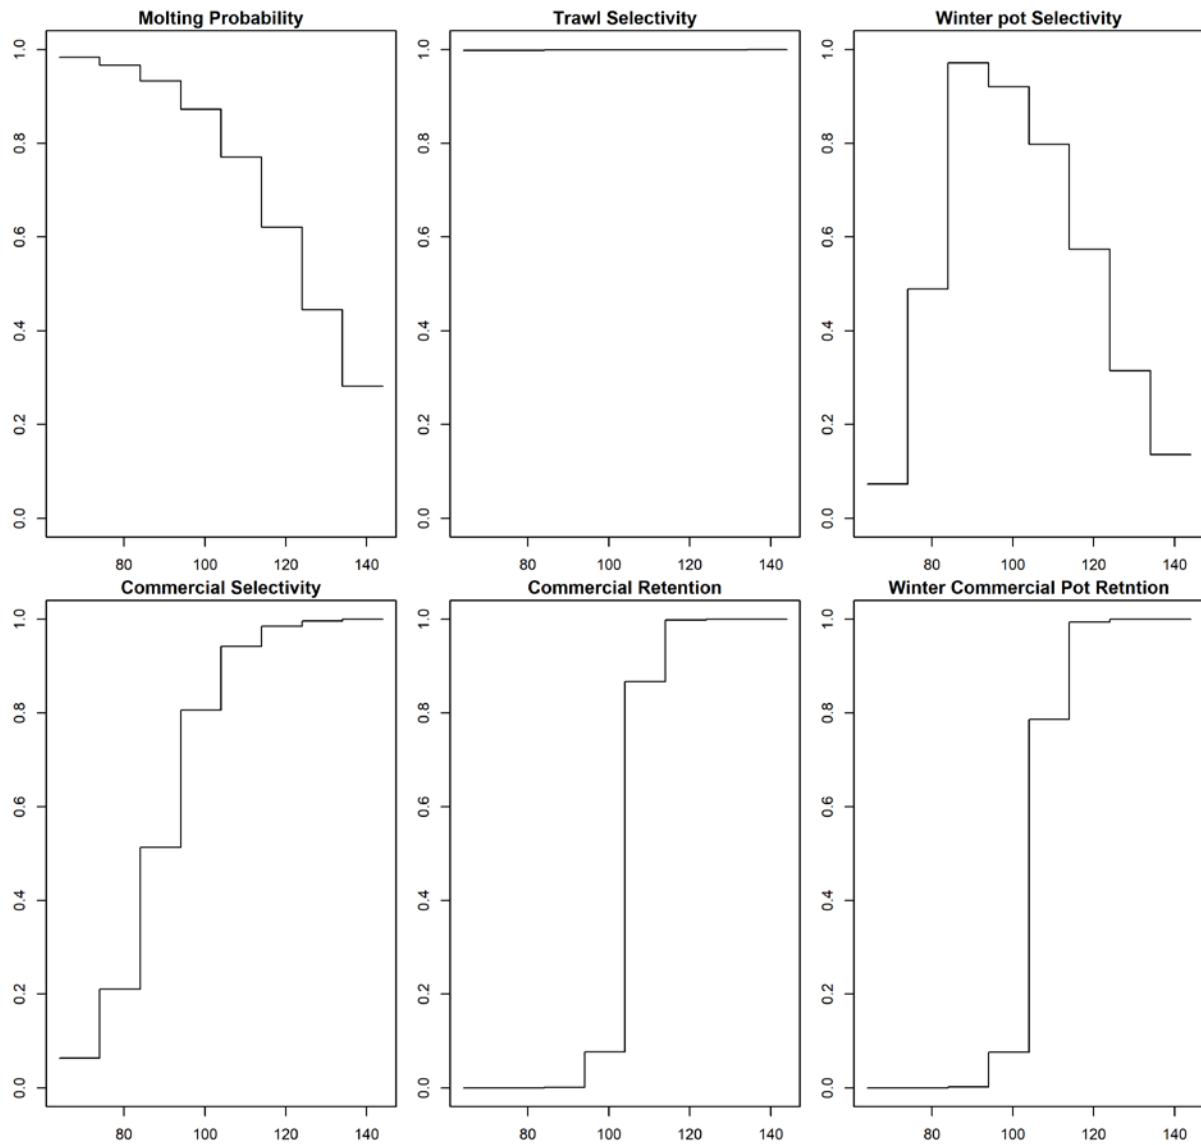

Figure C7-3. Molting probability and trawl/pot selectivity. X-axis is carapace length.

Trawl survey crab abundance

Figure C7-4. Estimated trawl survey male abundance (crab \geq 64 mm CL). Observed: White: NOAA Trawl Survey, Red: ADG&G Trawl Survey

Modeled crab abundance Feb 01

Figure C7-5. Estimated abundance of legal males from 1976-2015.

MMB Feb 01

Figure C7-6. Estimated abundance of Mature Male Biomass from 1976-2019. Dash line shows Bmsy (Average MMB of 1980-2019).

Summer commercial standardized cpue

Figure C7-7. Summer commercial standardized cpue 1977-2018.

Figure C7-8. Total catch and estimated harvest rate 1976-2018.

Figure C7-9. Predicted (dashed line) vs. observed (dots) length class proportions for commercial catch. Black: New Shell, Red: Old Shell

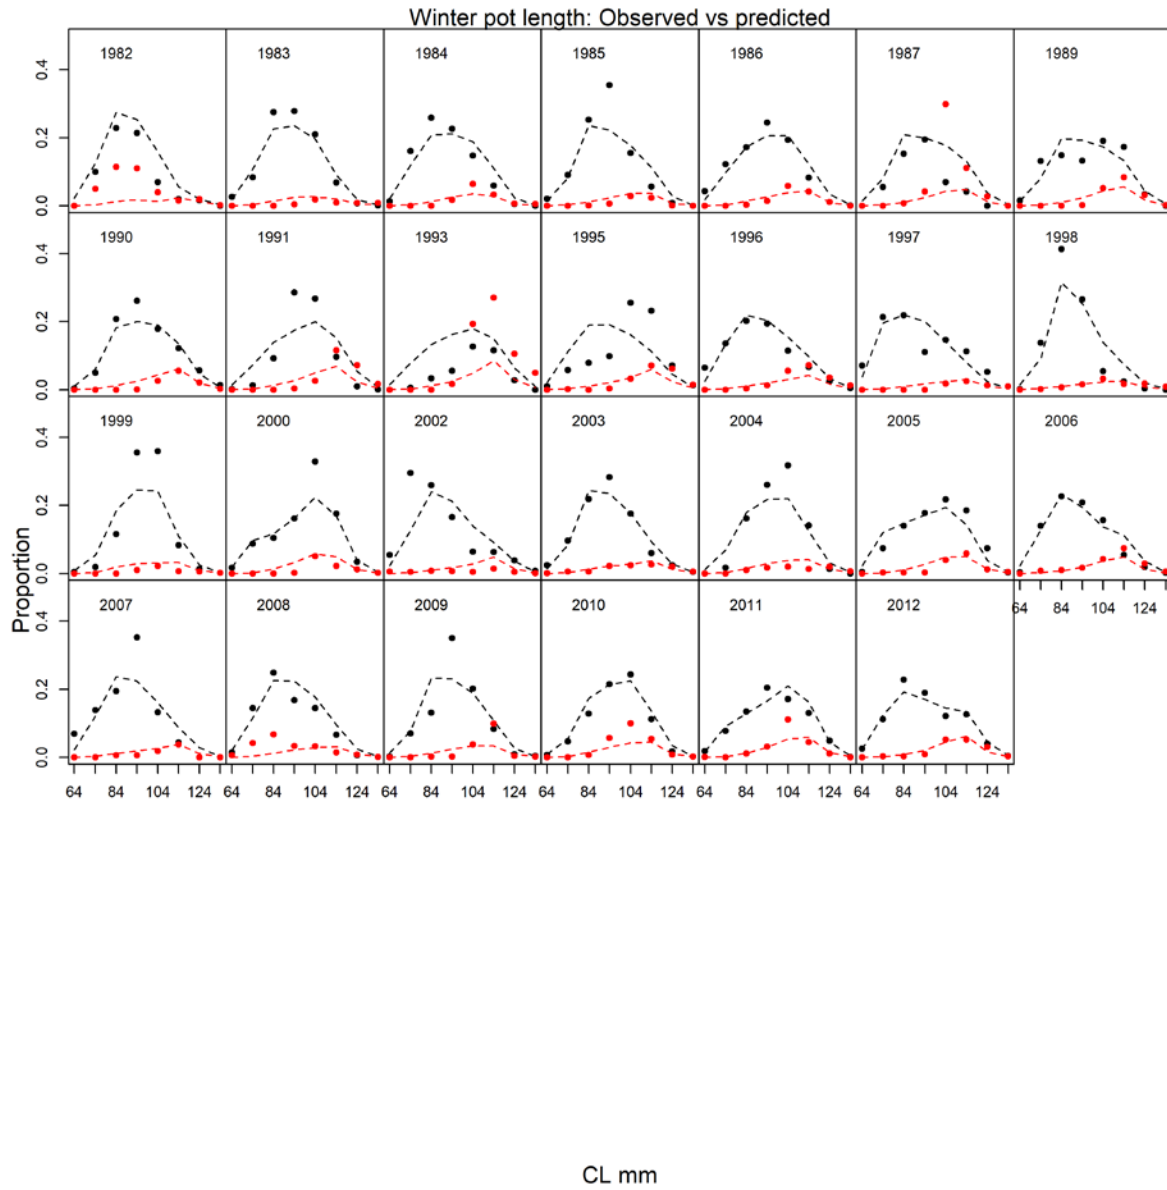

Figure C7-10. Predicted (dashed line) vs. observed (black dots) length class proportions for the winter and spring pot survey.

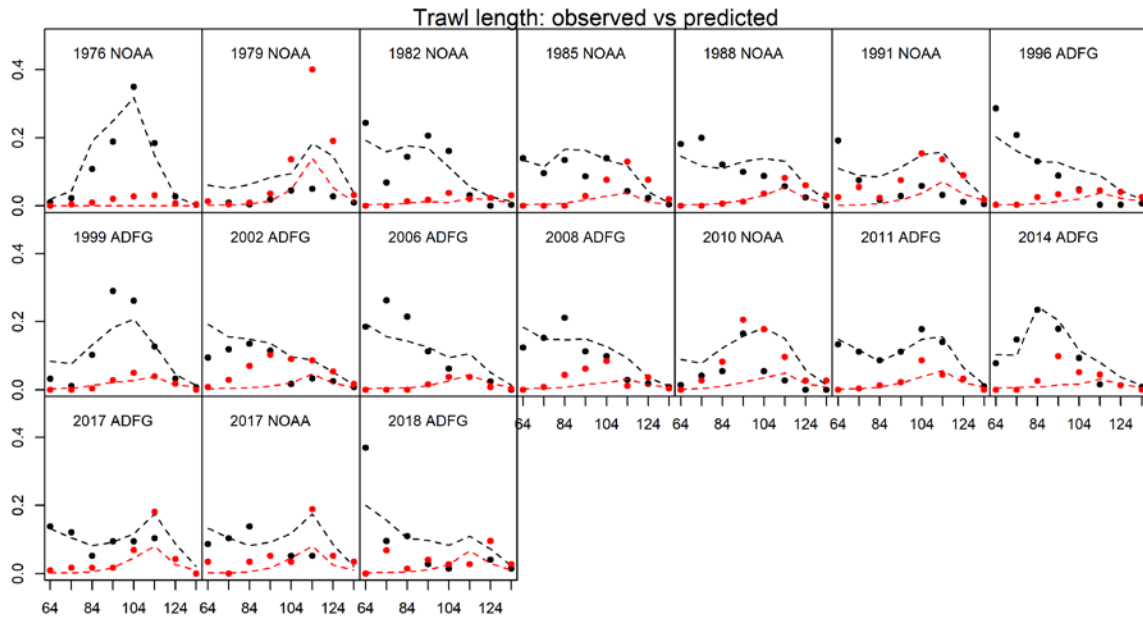

Figure C7-11. Predicted (dashed) vs. observed (dots) length class proportions for trawl.

Figure C7-12. Predicted (dashed) vs. observed (dots) length class proportions for the observer survey.

Figure C8-13. Predicted (dashed) vs. observed (dots) length class proportions for the observer survey.

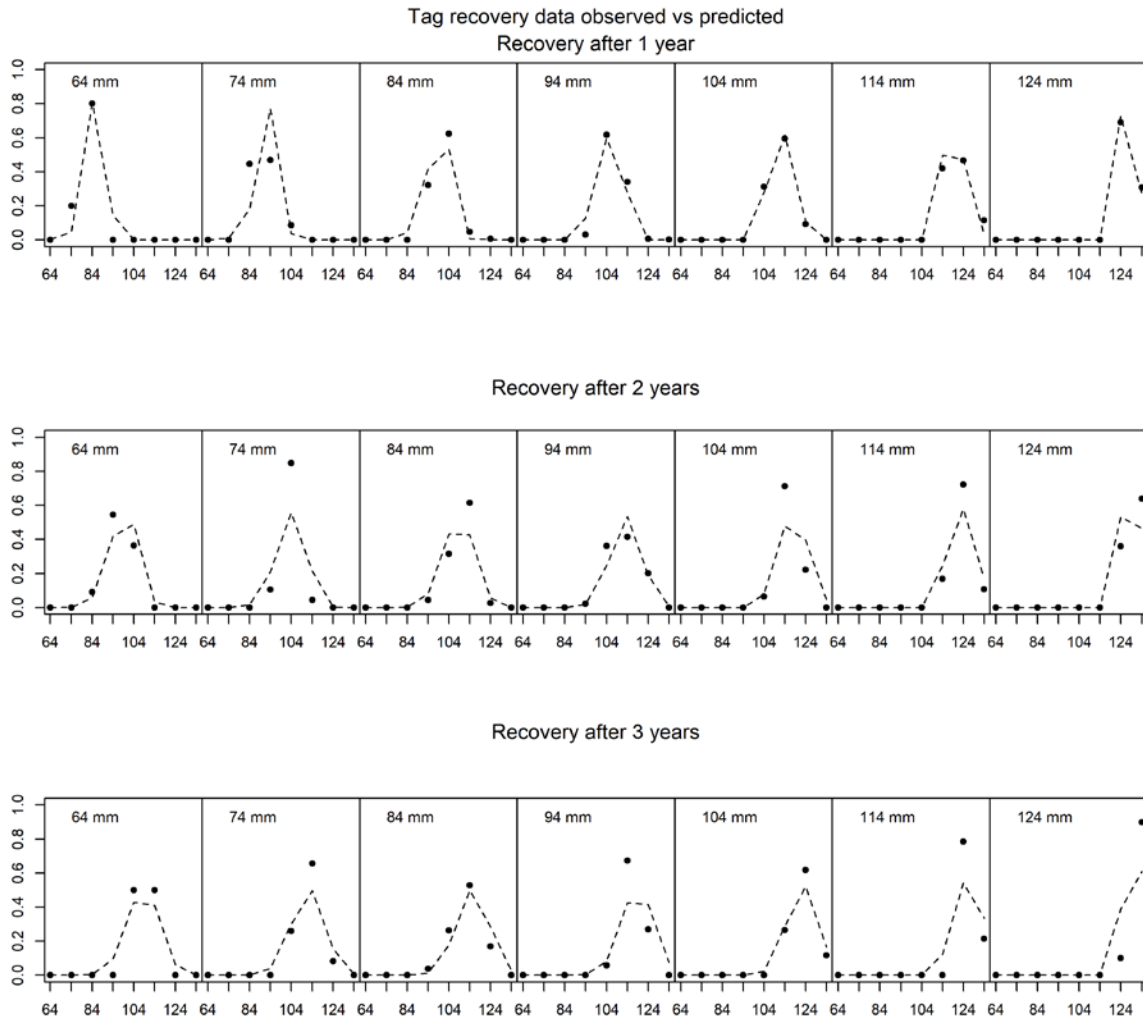

Figure C7-14. Predicted vs. observed length class proportions for tag recovery data.

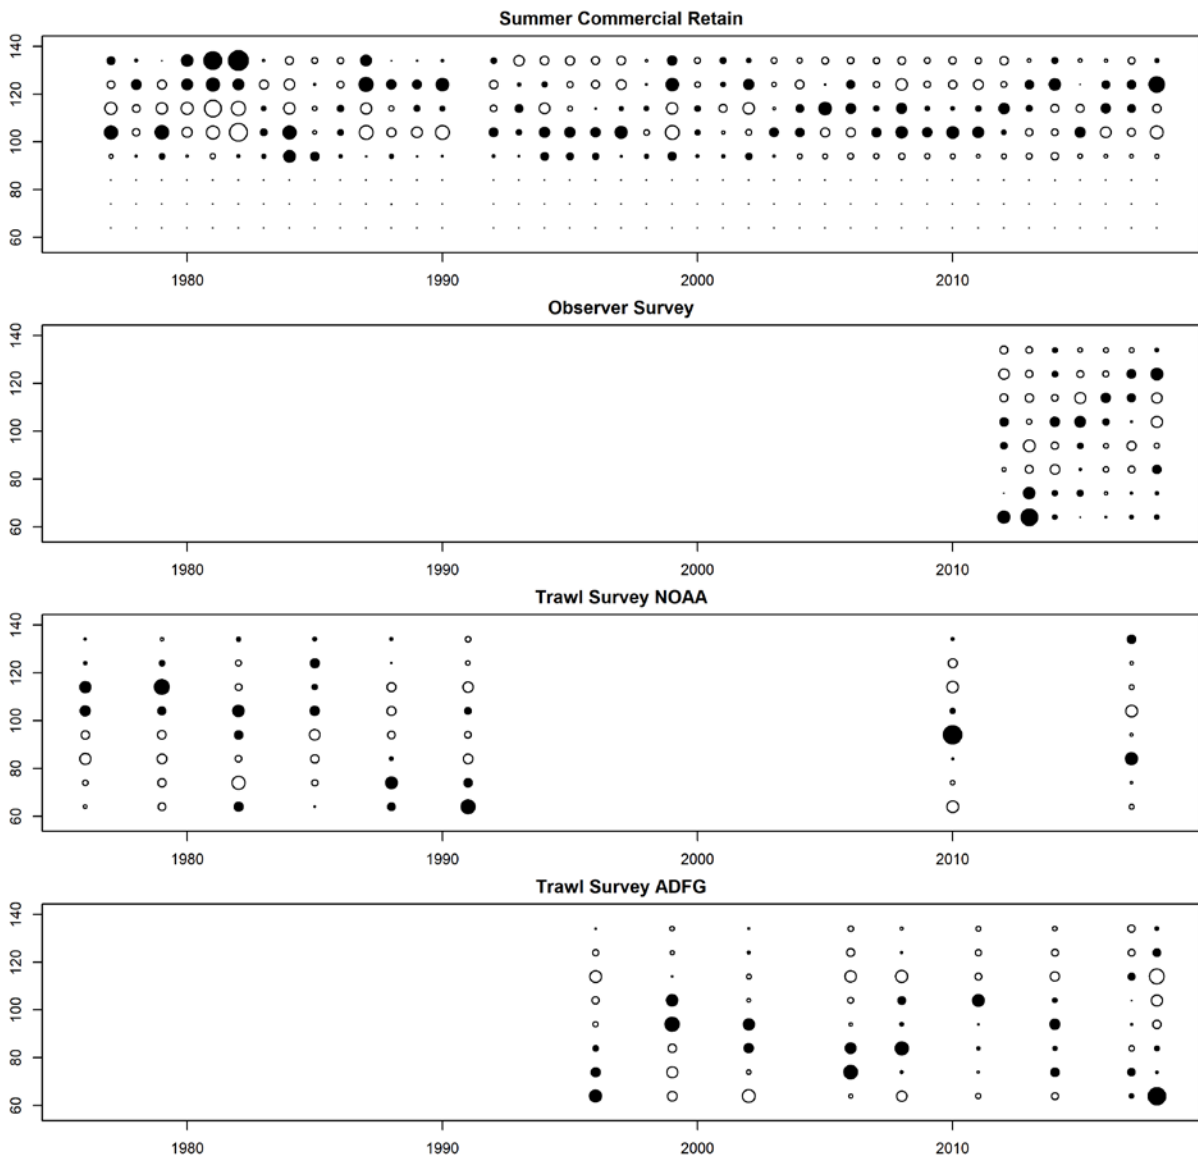

Figure C7-15. Bubble plots of predicted and observed length proportions. Black circle indicates model estimates lower than observed, white circle indicates model estimates higher than observed. Size of circle indicates degree of deviance (larger circle = larger deviance).

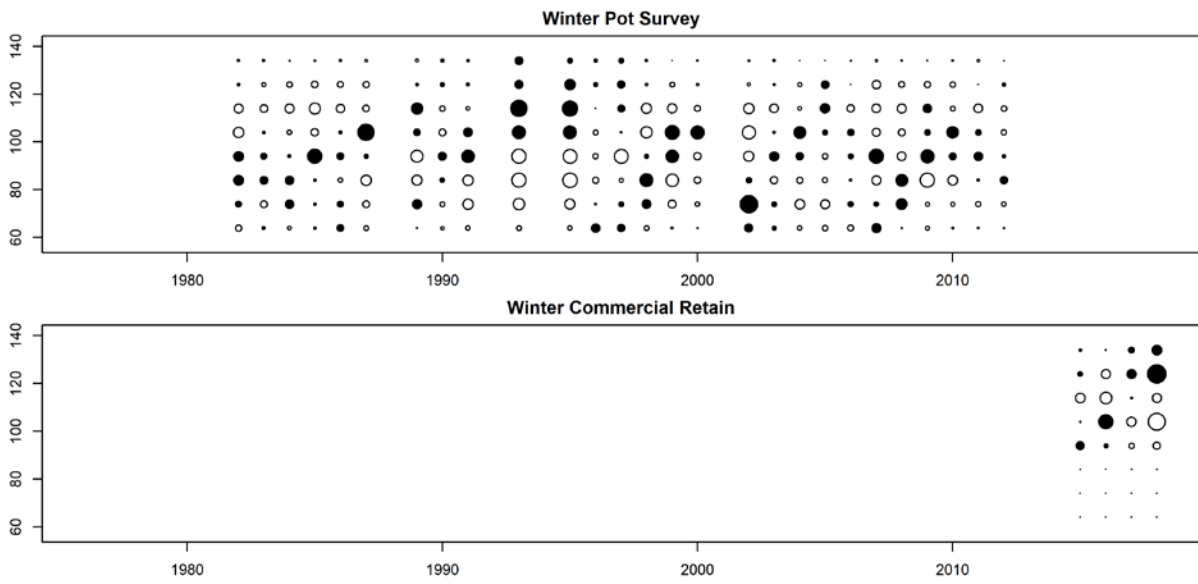

Figure C7-16. Bubble plots of predicted and observed length proportions. Black circle indicates model estimates lower than observed, white circle indicates model estimates higher than observed. Size of circle indicates degree of deviance (larger circle = larger deviance).

Table C7. Summary of parameter estimates for a length-based stock synthesis population model of Norton Sound red king crab.
