

During the staff presentation the Council requested additional information on the change in pollock distribution between GOA areas/seasons if the seasonal apportionments were changed. These tables are supplemental to Table 42 (Page 122) in the Council discussion paper for GOA Trawl Bycatch Management. They illustrate the net shift in area/seasonal apportionments of pollock TAC using the years 2003, 2006, 2009, 2012, 2015, and 2016. To address this request staff has provided information on the change in pollock TAC by area/season that would have occurred if the GOA pollock seasonal apportionment were changed from 25% in each season to 30% (A season), 30% (B season), 20% (C season), and 20% (D season).
