### **BSAI OTHER ROCKFISH**

**GROUNDFISH PLAN TEAM, NOV 2020** 

JANE SULLIVAN, INGRID SPIES, PAUL SPENCER,

ANDY KINGHAM, TODD TENBRINK, WAYNE PALSSON

SPECIAL THANKS TO IVONNE ORTIZ AND STEPHANI ZADOR

# FULL ASSESSMENT IN EVEN YEARS TIER 5 RANDOM EFFECTS MODEL

- No model changes
- New 2019 EBS shelf survey biomass estimate
- Recommendations for 2021:

Biomass 53,290 t

OFL 1,751 t

ABC 1,313 t (2% decrease from 2020)

### SSC/PLAN TEAM COMMENTS

"The SSC requests that all authors fill out the risk table in 2019..." (SSC December 2018), + other similar comments in June, October 2019

- ✓ Included in this assessment for the first time (Will discuss later)
- ✓ Time-consuming but useful exercise

### WHO ARE THE "OTHER" ROCKFISH?

- Everybody except POP, northern, shortraker, and rougheye rockfish
- Shortspine thornyhead, dusky, and at least 11 other Sebastes and Sebastolobus spp.

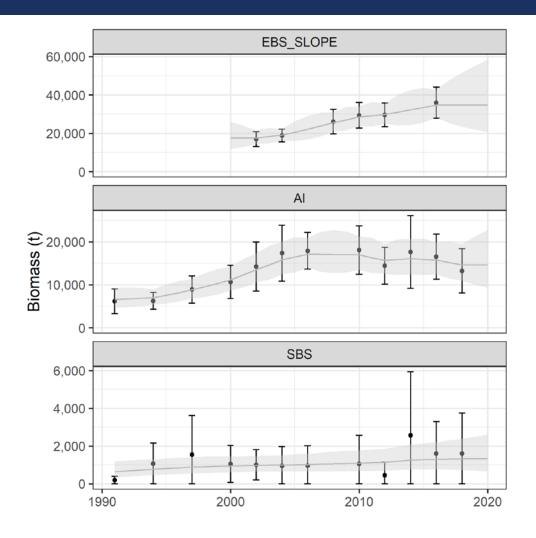

#### TIER 5 OTHER ROCKFISH METHODS

- Split complex into shortspine thornyhead (SST) and non-SST
- 2. RE model fit to AI, EBS shelf, and EBS slope survey biomass
  - Split Al survey into Al and Southern Bering Sea (SBS)
- BSAI-wide ABC and OFL for total Other Rockfish (SST + non-SST)
- 4. Other Rockfish ABC apportioned to AI and EBS using ratio of estimated biomass in each area

	SST	non-SST	Other Rockfish
М	0.03	0.09	-
Biomass	50,694	2,554	53,248
$F_{OFL}=M$	0.03	0.09	-
F <sub>ABC</sub> =0.75M	0.0225	0.0675	-
OFL	1,521	230	1,751
ABC	1,141	172	1,313
AI ABC	329	65	394
EBS ABC	812	107	919

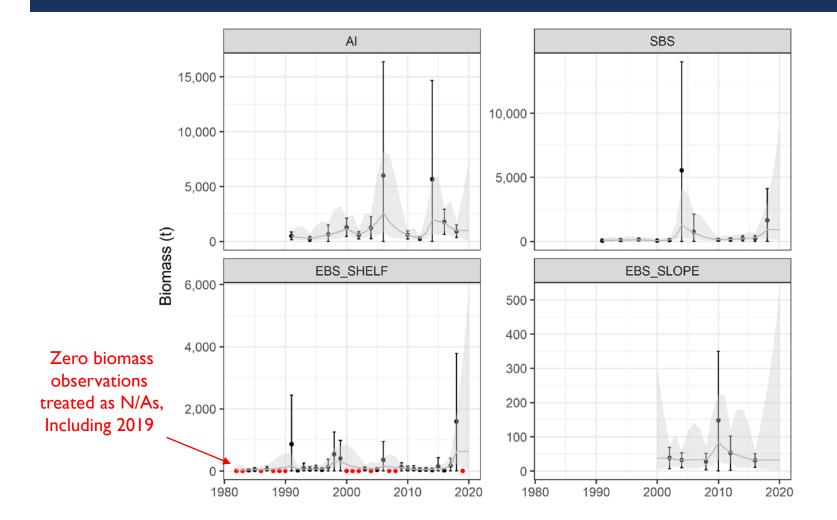

# SST TOTAL BIOMASS = 50,694 t

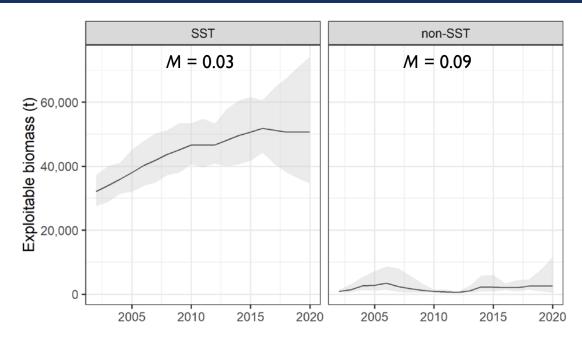

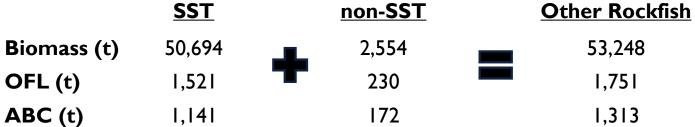

# NON-SST TOTAL BIOMASS = 2,554 t

# SUM RE MODEL RESULTS AND CALCULATE REFERENCE POINTS

	As estimated or specified last year for:		As estimated or recommended this year for:	
	2020	2021	2021	2022
Quantity

Status	2018	2019	2019	2020
Overfishing	No	No	No	n/a

#### BSAI Other Rockfish Comparison of catch to ABC/OFL (t)

#### RISK TABLE – NEW THIS YEAR

Assessment-related considerations	Population dynamics considerations	Environmental/ ecosystem considerations	Fishery Performance considerations
Level 2: Substantially increased concerns	Level 1: No apparent concern	Level 1: No apparent concern	Level 1: No apparent concern

#### No recommended reduction from max ABC

Assessment – different considerations for SST and non-SST (will cover next)

Pop dy and Fishery – any concerns addressed in Assessment considerations

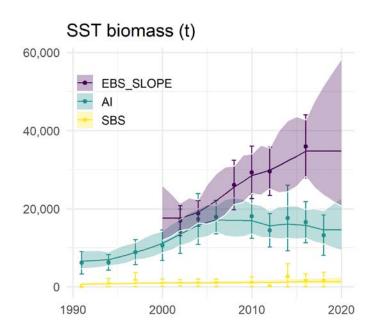

Environment (Ortiz and Zador) – focus on SST and dusky

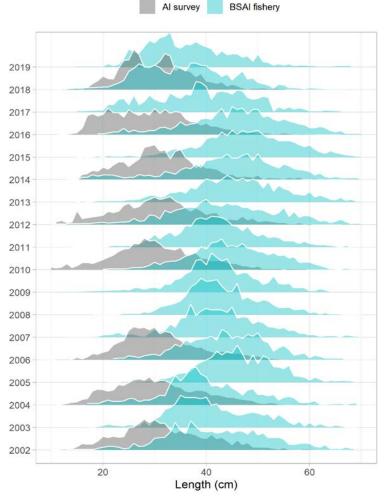

- Warm temperatures in mid-water column
- Limited diet data suggests SST and non-SST have different feeding strategies

#### SST ASSESSMENT CONSIDERATIONS LEVEL 2

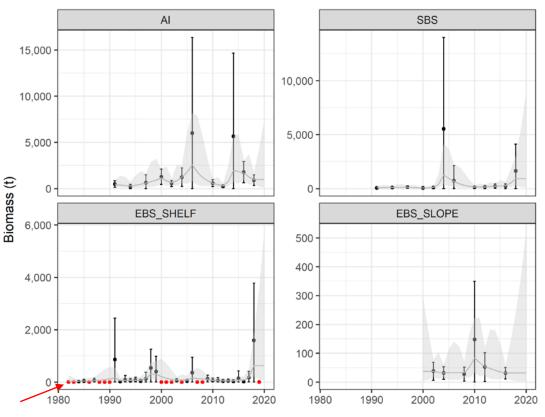

- Highest SST biomass on EBS slope, survey time series end in 2016
- 2. RE model performance outside the data
- Al survey doesn't sample below 500 m, likely missing SST biomass

#### NON-SST ASSESSMENT CONSIDERATIONS LEVEL 2

- Spasmodic trends in survey biomass in all survey areas, high uncertainty
- Zero biomass observations treated as N/As
- 3. Untrawlable habitat

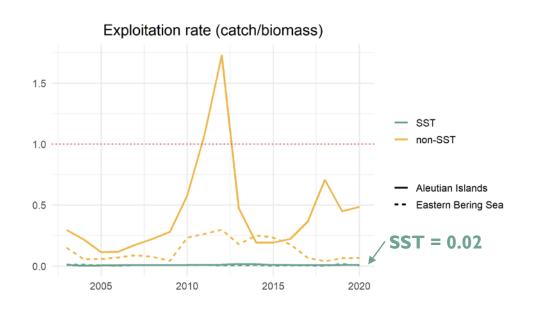

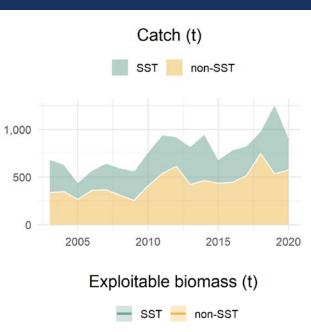

Zero biomass (13/38 observations)

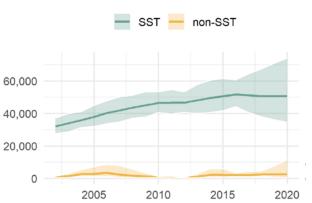

#### NON-SST ASSESSMENT CONSIDERATIONS LEVEL 2

- I. High catch/biomass, especially in Al
- 2. Mismatch between catch and biomass

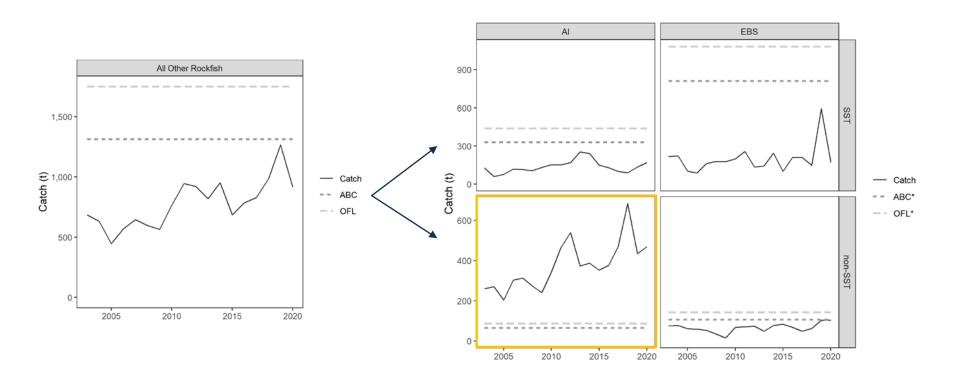

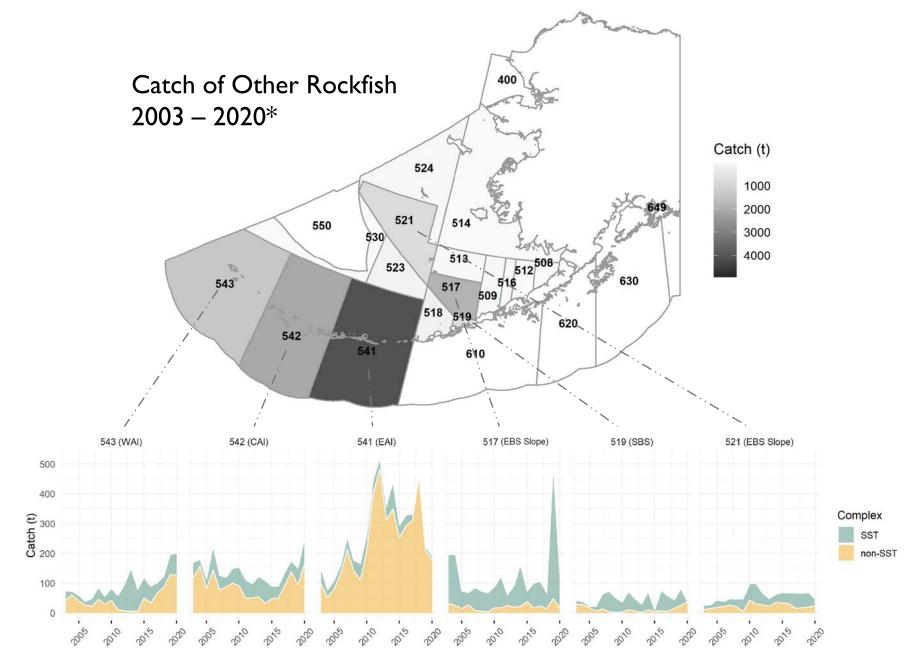

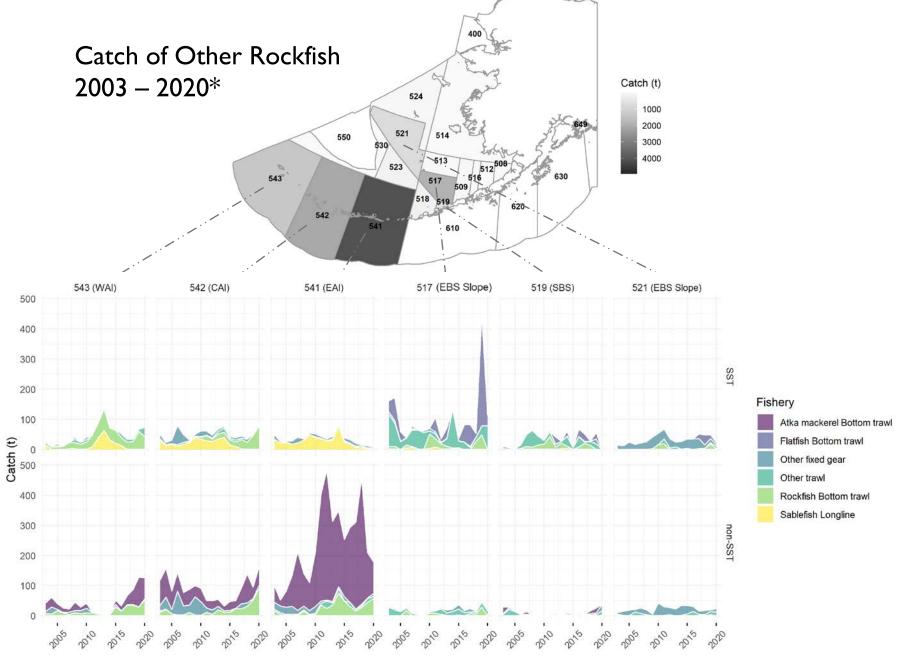

12

# REFERENCE POINTS SPLIT BY SPECIES GROUPS AND AREA

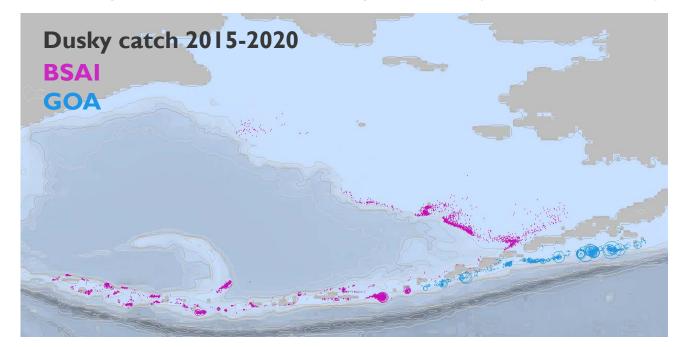

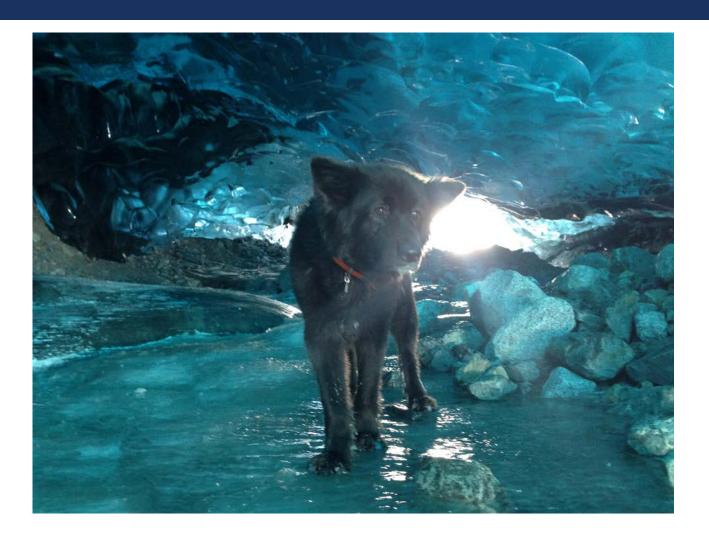

# PT DISCUSSION

- Non-SST as Tier 6?
  - Dusky stock structure
  - Trawlable vs. untrawlable habitat
- Natural mortality for non-SST: GOA Dusky M = 0.07 (Fenske et al. 2020)

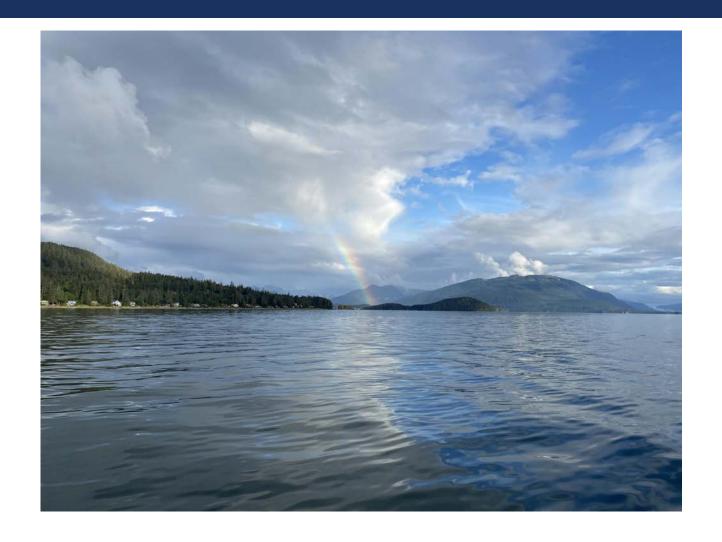

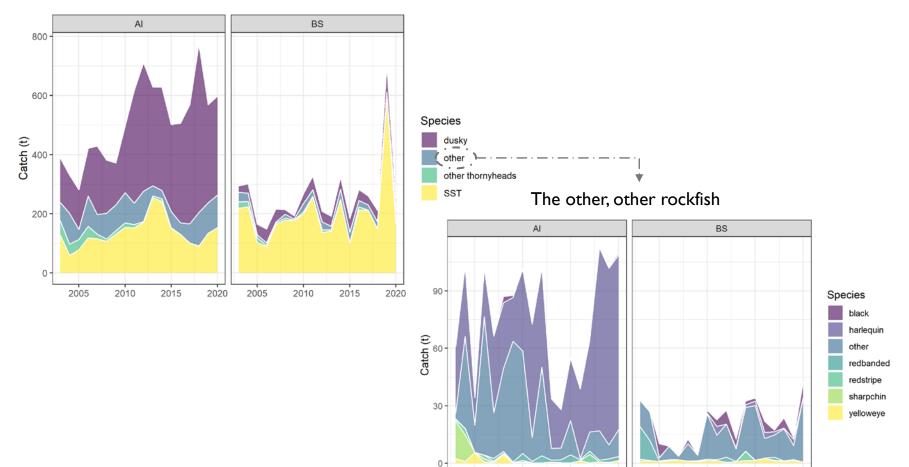

QUESTIONS JANE.SULLIVAN@NOAA.GOV

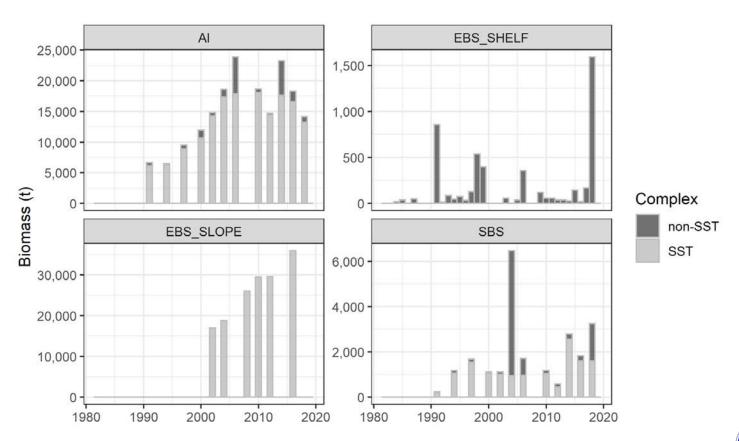

# SUPPLEMENTARY SLIDES

# **DETAILED CATCH**

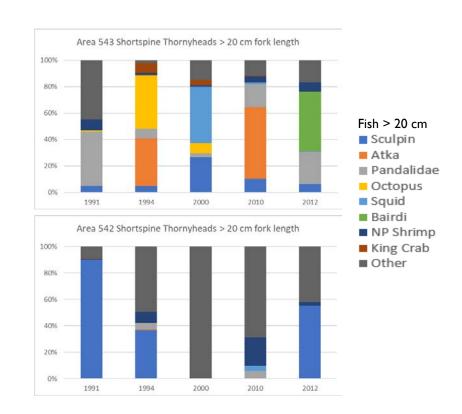

# SURVEY BIOMASS BY SST AND NON-SST

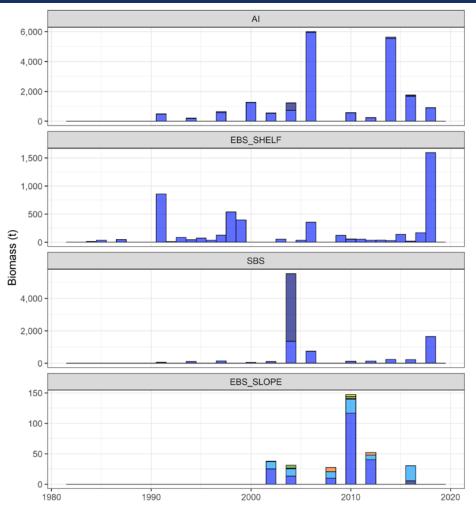

# ENVIRONMENTAL CONSIDERATIONS (ORTIZ AND ZADOR)

- Focus on SST and dusky rockfish
- Warm temperatures since 2016 in Al 100-250 m (GODAS)
- Diets differ between SST (generalists) and dusky (generalist planktivores)
- Diet data limited, most recent samples from 2012
- Diet data shows variation in SST diets in AI

### DETAILED NON-SST SURVEY BIOMASS

#### **ASSESSMENT AND APPORTIONMENT:**

SPLIT-SPLIT-LUMP-LUMP-LUMP-SPLIT
