

MEMORANDUM

TO: Council, SSC, and AP Members

FROM: Chris Oliver 
Executive Director

DATE: October 1, 2005

SUBJECT: Gulf of Alaska Groundfish Rationalization

ESTIMATED TIME 6 HOURS (all C-6 items)
--

ACTION REQUIRED

- (a) Review discussion paper on Gulf Rationalization Community Programs; refine options as appropriate

BACKGROUND

The Council's motion on Gulf of Alaska Rationalization currently includes two community programs: the **Community Fisheries Quota (CFQ) Program** and the **Community Purchase Program (CPP)**. These programs are proposed for inclusion in either of the Council's primary Gulf rationalization action alternatives, and the Council could select one program or both (in combination) at final action. At its June 2005 meeting, the Council approved several changes to the options for both programs, the majority of which were recommended by the GOA Rationalization Community Committee. The June 2005 Council motion is provided as **Item C-6(a)(1)**.

Note that as part of its June motion, the Council also requested that staff provide community groundfish catch data (excluding IFQ sablefish) at a subsequent Council meeting, and noticed the public that after reviewing the catch data, a minimum landing threshold may be added to the options to address community groundfish dependency. Staff developed a discussion paper, both to meet this request and provide an overview of some outstanding legal concerns regarding the CFQ Program, for review at this meeting. **The purpose of this discussion paper is to:**

- Provide a general overview of the proposed community programs under Gulf of Alaska Rationalization and their intended implementation;
- Outline NOAA General Counsel's legal concerns with the implementation of the CFQ Program and recommendations to mitigate those concerns; and
- Provide fisheries participation and socio-economic data on the communities potentially eligible for the programs, as requested by the Council in June 2005.

The discussion paper is provided as **Item C-6(a)(2)**. The current suite of options for the GOA community programs, as revised in June 2005, is provided as **Attachment 1** to the discussion paper. While no action is required at this meeting, the Council may take action as necessary. Specifically, the Council may choose to modify the options for the CFQ Program in order to mitigate the legal concerns outlined in the discussion paper. The Council also noticed the public in June that upon reviewing the community catch data, a minimum landing threshold may be added to the options to address community groundfish dependency in one or both programs.

**Council Motion on Gulf of Alaska (GOA) Rationalization Community Provisions
June 5, 2005**

The Council adopted the GOA Rationalization Community Committee recommendations as outlined in the staff report from the March 30, 2005 committee meeting with the following changes:

Community Fisheries Quota (CFQ) Program

C 1.1 Administrative Entity

If Option 2 Suboption 1 or Option 3 is selected, the CFQ for a specific management area (WG, CG, WY) would be initially allocated to the management entity representing communities located in that area based on: 1) equal basis and/or 2) population. No more than 50% of the CFQ for any area can be allocated to the entity on an equal basis.

C 1.2 Board Representation of the Administrative Entity

Option 3 (Applicable with C 1.1, Option 1): The makeup of the administrative entity's Board of Directors shall reflect population, local participants' harvest history, and geography.

C 1.3 Eligible Communities

Option 3. Historic Participation in Groundfish Fisheries

~~a. Communities with residents having any commercial permit and fishing activity as documented by CFEC in the last 10 years (1993-2002)~~

b. a. Communities with residents having any groundfish commercial permit and fishing activity as documented by CFEC in the last ten years (1993-2002)

~~Option 4. GOA (WG,CG,WY) communities eligible under GOA Am. 66 are eligible~~

C 1.11 Use of Lease Proceeds by Administrative Entity

Use of lease proceeds is restricted to administrative expenses. ~~and:~~

Option 1. **and purchase of additional GOA groundfish quota shares**

Option 2. **and fisheries related investments**

Option 3. **and investments in the economic development and social well being of member communities**

Option 4. **and distribution to member community CQEs**

C 1.15 Administrative Oversight

A report submitted to NMFS **and the NPFMC** detailing the use of QS by the administrative entity. The required elements and timing of the report will be outlined in regulation.

Community Purchase Program

C 2.4 Administrative Oversight

A report submitted to NMFS **and the NPFMC** detailing the use of QS by the administrative entity. The required elements and timing of the report will be outlined in regulation.

Additionally, the Council requests that staff provide community groundfish catch data (excluding IFQ sablefish). The Council is notifying the public that after reviewing catch data, a minimum landing threshold may be added to address community groundfish dependency.

The Council recommends the continued work of the GOA Rationalization Community Committee when additional data is available.

Gulf of Alaska Rationalization Community Provisions
Staff discussion paper
October 2005

The Council's motion on Gulf of Alaska Rationalization currently includes two community programs: the **Community Fisheries Quota (CFQ) Program** and the **Community Purchase Program (CPP)**. The current motion, revised in June 2005, is provided as **Attachment 1**. Both programs are being analyzed for potential incorporation in the general GOA rationalization Alternatives 2 and 3. The Council could select one program or both (in combination) at final action. The purpose of this discussion paper is to:

- Provide a general overview of the proposed community programs under Gulf of Alaska Rationalization and their intended implementation;
- Outline NOAA General Counsel's legal concerns with the implementation of the CFQ Program and recommendations to mitigate those concerns; and
- Provide fisheries participation and socio-economic data on the communities potentially eligible for the programs, as requested by the Council in June 2005.

I. Overview of GOA Rationalization Community Programs

The Council has approved an overall purpose statement to guide the development of the community provisions, as well as purpose statements specific to the CFQ Program and Community Purchase Program. The following overall purpose statement is included in the current (June 2005) motion:

It is the Council's intent that the Community Fisheries Quota (CFQ) Program and the Community Purchase Program (CPP) be the subject of standalone staff analysis for future inclusion in GOA groundfish rationalization alternatives as appropriate. The intent is not to create these programs as a trailing amendment, but to implement them at the same time GOA rationalization goes into effect.

Bering Sea/Aleutian Islands communities (CDQ or otherwise) and communities adjacent to the Eastern GOA regulatory area Southeast Outside District (except Yakutat) will not be included in any Gulf rationalization community provision programs.

PURPOSE: The Council recognizes the importance of providing economic stability for communities historically dependent upon GOA groundfish fisheries. Consistent with the guidance provided by the Consolidated Appropriations Act of 2001, National Standard 8, and the National Research Council Report, the Council acknowledges that rationalization programs can have significant impacts on fishing-dependent communities. Community provisions are intended to address community impacts resulting from rationalization and seek to provide economic stability or create economic opportunity in fishing-dependent communities, and provide for the sustained participation of such communities.

Community Fisheries Quota (CFQ) Program

Purpose statement in motion:

The CFQ program would allocate a percentage of the annual Federal TAC to an administrative entity that would subsequently determine how to use the annual harvest privileges according to criteria established in Federal regulation. Depending upon the structure and restrictions established, the non-profit entity would use the shares to enable eligible communities to fish the shares. CFQ will be fished only by eligible community residents and will not be leased outside of the community to be used for other economic development.

The intent of the CFQ program is to mitigate the economic impacts of Gulf groundfish rationalization on small (less than 1500), isolated GOA communities with a historical dependence on groundfish. Further, it is the intent of the program to sustain current participation and access to the fisheries by those communities.

Intended implementation:

- Individual communities are determined eligible at Council final action, based on criteria in the motion. Eligible communities and the criteria by which they were evaluated are listed in the Federal regulations implementing the Gulf rationalization program.
- The amount of initial allocation to CFQ program (5%, 10% or 15%) is determined at Council final action and established in Federal regulation. That allocation is fixed until subsequent rulemaking is proposed to make changes. Thus, there is no administrative determination subject to an appeal at the time of initial allocation.
- NMFS makes the initial allocation of CFQ (5%, 10% or 15%) to the management entity or entities representing eligible communities. If one management entity is established at final action, the entire CFQ allocation is allocated to that entity. If more than one management entity is established at final action, NMFS makes the initial allocation based on the objective criteria selected at final action. Options for this criteria (e.g., number of communities and population) were added to the current motion in June 2005.
- The management entity(ies) hold CFQ on behalf of eligible communities during the life of program. The management entity cannot sell CFQ.
- Eligibility requirements are established in Federal regulation to identify individuals eligible to lease CFQ (e.g., permanent resident of an eligible community; U.S. citizen; qualified to receive quota by transfer; vessel ownership and/or employment on a vessel and/or vessel leased under contract).¹ See section C 1.7.
- The Board of Directors (BOD) of the management entity determines the process and criteria by which to evaluate eligible residents that apply to lease CFQ for the fishing year. The universe of individuals to which the BOD may lease quota is subject to the eligibility requirements selected by the Council at final action (see above bullet), but the decision of how to distribute IFQ among qualified individuals is left up to the management entity. The management entity must submit the process it is going to use to solicit requests from residents to lease CFQ and the criteria it will use to determine the distribution of leases among qualified residents as part of the application to NMFS to qualify as the management entity that holds CFQ on behalf of communities (see C 1.14). NMFS approves the overall application, but does not require a specific process or criteria. Thus, the criteria used by the BOD to select individuals to lease CFQ is not in Federal regulation.

¹Comparisons have been made between this program and GOA Am. 66. Under Am. 66, the individual leasing annual IFQ derived from community-held QS must be an eligible community resident, U.S. citizen, and eligible to receive quota by transfer. There is also a restriction that the eligible resident may not hire a master (designate a skipper) to fish the community IFQ (50 CFR 679.7(f)(16)). The community resident leasing the IFQ must be onboard the vessel when the IFQ is being fished. The Council recommended this requirement to help ensure that the potential benefits of QS held by communities would be realized by resident fishermen of those communities and not leased outside the communities.

- RAM Division would administer and approve any transfer of an annual CFQ permit to an eligible community resident, using the mandated eligibility requirements in Federal regulation (e.g., permanent resident of an eligible community, U.S. citizen, qualified to receive quota by transfer, etc).
- Administrative due process would be provided should an individual dispute the determination by RAM that they did not meet the eligibility criteria in Federal regulation.
- The management entity submits an annual report, which includes findings related to the leasing of CFQ to community residents. Elements and timing of the report would be listed in Federal regulations.
- Revenues generated from leasing CFQ to community residents may be restricted in Federal regulations (C. 1.11).

Community Purchase Program (CPP)

Purpose statement in motion:

The CPP would allow a defined set of eligible communities to organize an administrative entity to purchase, hold, and use Gulf groundfish quota share within the rationalization program. In contrast to receiving an initial allocation, this provision would designate an administrative entity representing eligible communities as an eligible quota shareholder under the rationalization program, and that entity would be allowed to purchase GOA groundfish shares on the open market.

The purpose of the CPP is to provide the eligible communities with the opportunity to sustain their participation in the rationalized fisheries through the acquisition of Gulf groundfish fishing privileges. Further, it is the intent of the program to maintain and enhance current participation and access to Gulf groundfish fisheries by those communities.

Intended implementation:

- Individual communities are determined eligible at Council final action, based on criteria in the motion. Eligible communities and the criteria by which they were evaluated are listed in Federal regulations implementing the Gulf rationalization program. List of eligible communities may vary from CFQ Program communities.
- Upon implementation of the program, eligible communities may organize a new non-profit management entity or use an existing entity, which would submit an application to NMFS to represent one or more communities. Each community could select its own management entity or could choose to be represented by the same management entity. The elements of that statement will be in Federal regulation. The management entity is authorized under Federal regulation to purchase and hold Gulf groundfish QS on behalf of its member communities during the life of the program.
- Eligibility requirements are established in Federal regulation to identify individuals eligible to lease quota share purchased and held by the management entity (e.g., permanent resident of an eligible community, U.S. citizen, qualified to receive quota by transfer). This is similar to the Gulf Amendment 66 community quota share purchase program implemented in 2004. *May need to add statement in CPP motion that harvesting of shares is limited to residents of any eligible community, if that is the intent.*

- The Board of Directors (BOD) of the management entity determines the process and criteria by which to evaluate eligible individual residents that apply to lease community QS for the fishing year. The universe of individuals the BOD may lease quota to is subject to the eligibility requirements selected by the Council at final action (see above bullet), but the decision of how the entity distributes IFQ among qualified individuals is left up to the management entity.

The management entity must submit a detailed statement of eligibility to NMFS prior to representing communities (see C 2.3). While not listed in the motion, one of the requirements of the management entity's application to represent communities could be a description of the process the BOD is going to use to solicit requests to lease CFQ and the criteria it will use to determine the distribution of leases among qualified individuals. NMFS would not require a specific process or criteria, but the agency would ensure that these elements are submitted as part of the application to purchase quota on behalf of communities.

- RAM Division would administer and approve any transfer of an annual IFQ permit to a community resident, using the mandated eligibility requirements in Federal regulation (e.g., permanent resident of an eligible community, U.S. citizen, qualified to receive quota by transfer).
- Administrative due process would be provided should an individual dispute the determination by RAM that they did not meet the individual eligibility criteria in Federal regulation.
- The management entity submits an annual report detailing the use of Gulf quota share by the entity. Elements and timing of report are listed in Federal regulations (C 2.4).
- Revenues generated from leasing QS to community residents are not restricted in the current motion.
- The amount of Gulf groundfish QS that may be purchased by the entities representing communities is limited on an individual community basis and an aggregate basis. The current motion also notices the public that further limitations on the type of QS that can be purchased by a management entity representing communities may be considered.

II. NOAA's legal concerns with the CFQ Program and recommendations

Recall that NOAA General Counsel (GC) provided a legal opinion, dated October 3, 2003, on delegation of Secretarial authority concerns related to the Community Incentive Fisheries Trust (CIFT) Program that was included in the Council's motion for GOA rationalization at that time (Attachment 2). The CIFT Program was subsequently removed from the proposed community programs for analysis, due in part to the legal concerns and other issues. However, at that time, NOAA GC advised the Council that the legal concerns discussed in the context of the CIFT Program could likewise be applied to the CFQ Program as currently proposed. Several modifications to this program have been made since that time, in part to attempt to address NOAA GC's concerns. These changes include revisions to the purpose statement and the addition of implementation details.

Staff noted at the June 2005 Council meeting that ongoing consultation with NOAA GC is necessary to ensure that both programs' design is within the bounds established under the Federal law with regard to the delegation of Secretarial authority and due process. Staff met with NOAA GC in August, in order to continue this process for the proposed CFQ Program and Community Purchase Program.

The guidance received from NOAA GC is that legal concerns remain with the CFQ Program's current structure. The purpose and design of the program imply that the benefits of the CFQ allocation are intended not only for the non-profit management entity, but also for resident fishermen. The non-profit entity's discretionary authority over the sub-allocation of Gulf quota share triggers the same legal concern discussed in the October 2003 opinion. In sum, NOAA GC identified the following issues:

- **There is a legal concern with creating a program in which the primary purpose is to delegate discretionary authority to a private entity to sub-allocate quota (in this case, from a management entity to community residents), as currently stated in the CFQ Program purpose statement.** This is because, under Federal law, the SOC cannot approve a program in which discretionary authority to reallocate quota is delegated to a separate entity, which means parties aggrieved by such a decision would have no agency review or appeal right. As described in Part I of this paper, the intended implementation of the CFQ Program is to create some eligibility criteria in Federal regulation that would identify the universe of individuals that could lease quota from a community entity (e.g., U.S. citizen, resident of eligible community, eligible to receive QS by transfer). Clearly, however, further decisions on how to lease CFQ among individuals that met all of the mandated criteria would have to be made. The intent was that the BOD of the management entity would be required to develop a process to solicit applicants to lease annual IFQ as well as a method of selecting the individuals to which that IFQ would be leased. This selection criteria would be determined by the BOD after the program had been implemented, and thus would not be in Federal regulations. The primary legal concern with this program design relates to the fact that the SOC cannot delegate functions which are discretionary in nature or require the exercise of judgment, as that responsibility has been specifically given to the agency by Congress under the Magnuson-Stevens Act.² A major concern with the delegation of discretionary authority to outside entities is the Constitutional right of procedural due process.
- **If the Council wanted to allay the legal concerns but still leave the management entity flexibility to determine who leases/fishes the quota, one would need to design the program with a different purpose.** This purpose might be "to allocate Gulf groundfish quota (CFQ) to qualified applicants representing eligible Gulf communities, in order to use that allocation to provide benefits to communities." Changes to this effect would eliminate references in the purpose statement that CFQ will be fished only by eligible community residents. This implies that the entity is allowed to make the decision about how best to accomplish the goal of benefiting communities, and the 'sub-allocation' issue is no longer a primary aspect of the program. While allocating quota share to community residents is one way that the entity could use the allocation to benefit communities through the program, it is not a mandated course of action and thus, it is not the primary purpose of the program. This purpose is somewhat similar to the CDQ Program.
- **If the CFQ Program motion was left as stated currently, with the primary purpose being to lease quota to community residents, the program would have to be modified such that the management entity would not make any discretionary choices about leasing to person A versus person B.** All of the criteria used to make the leasing decisions would need to be in Federal regulations, and each decision must be subject to appeal through NOAA's Office of Administrative Appeals. This scenario makes the criteria used to determine how the CFQ allocation is leased an essential element of the program at final action. The criteria needs to be in Federal regulations in order for NOAA to determine whether those criteria were applied correctly

²Section 305(d) of the MSA states: 'RESPONSIBILITY OF THE SECRETARY.--The Secretary shall have general responsibility to carry out any fishery management plan or amendment approved or prepared by him, in accordance with the provisions of this Act. The Secretary may promulgate such regulations, in accordance with section 553 of title 5, United States Code, as may be necessary to discharge such responsibility or to carry out any other provision of this Act.'

by the management entity and to approve the individual leasing decisions. The leasing decisions would then be subject to an administrative appeals process, and the agency appeals process is subject to review by the Courts under the Administrative Procedure Act and the Constitution.

- **The issue of delegating SOC authority to allocate quota share to an outside entity has not been identified as a legal concern in the Community Purchase Program, as there is no allocation involved in that program.** That program only identifies another type of eligible 'person' (i.e., non-profit entity representing communities) that is allowed to receive quota by transfer (purchase).

Recommendations to change the CFQ Program to mitigate legal concerns:

NOAA GC and staff discussed several options for modifications to the CFQ Program that would mitigate the legal concerns identified above. The following four options are mutually exclusive.

- (1) **Program status quo, but establish all criteria used for making individual leasing decisions (e.g., boat ownership, crew size, how much IFQ an individual owns, etc.) in Federal regulations.** The nonprofit management entity would apply the criteria in Federal regulations and perform the first cut at individual leasing decisions; NMFS would review those recommendations and issue a decision. There would be an opportunity for administrative appeals of the agency's decision. The criteria would need to be clear, and preferably objective, in order to be effectively administered by NMFS. Depending on the level of resident participation in the program, a significantly longer timeframe and additional staff may be necessary to accommodate appeals.
- (2) **Program status quo, but make selection process for individual leasing a completely ministerial process (i.e., mathematical exercise).** As in #1 above, the criteria used to make individual leasing decisions would be in Federal regulations, and NMFS would review and approve all leasing recommendations made by the management entity, with the opportunity for administrative appeals. The difference is that the criteria to distribute quota among all applicants would be a formula. Thus, the appeals process would primarily be limited to ensuring that the management entity did the correct math to apply the formula, based on the number of applications received. The timeframe necessary for appeals would likely be reduced.
- (3) **Change the purpose of the program.** As mentioned previously, the purpose of the program could be modified as such: 'to allocate Gulf groundfish quota (CFQ) to qualified applicants representing eligible Gulf communities, in order to use that allocation to provide benefits to communities.' Under this design, the entity can use the quota in any way it sees fit to meet that purpose, whether by leasing quota to a community resident, purchasing a vessel to fish the shares, or some other means. If so inclined, the Council could include a transfer provision as part of the program, such that if an entity chooses to lease the quota to an individual to fish, it must be leased to an eligible community resident.
- (4) **Program status quo, but authorize the program under an MSA amendment.** Depending on the Council's preferred alternative, an amendment to the MSA (or new legislation) may be the only way to implement the entire Gulf rationalization program, so this option may be entirely feasible and anticipated. While this option may overcome the statutory limitations, however, it may still effect Constitutional concerns. One of the major concerns associated with the delegation of authority to private parties by Congress is the Constitutional concept of separation of powers.

Staff notes that (1) and (2) above would leave the program purpose and structure nearly the same as designed in the current motion; the difference is that all of the criteria used to determine whether person A versus person B leases the CFQ would be in Federal regulation. The need for agency approval and appeal of each individual leasing decision may complicate the program, although this is largely dependent upon the criteria selected. Both #1 and #2 require that the management entity submit its allocation decisions with sufficient time to administer an appeals process.

If the Council opted to make the selection process for individual leasing a completely ministerial process as in (2), it would likely require less time for an appeals process. Some examples of a formulaic approach might be: equal distribution among applicants at a given lease price; 'first come, first served,' or a bid process with applicants providing a bid for the amount of CFQ they would like to lease. One could also employ caps on the amount of IFQ that could be leased by an individual fisherman, as proposed in C 1.8. This method would employ an application period, and the leasing recommendations would be submitted from the management entity to NMFS. NMFS would then ensure that each individual selected by the entity met the eligibility requirements (e.g., U.S. citizen, resident of the community, etc.) and that the entity followed the formula in regulation to distribute annual CFQ among qualified applicants.

Option (3) would change the stated purpose of the CFQ Program to one in which the management entity uses the allocation as it sees fit to benefit eligible communities. This is a very broad purpose, which implies that the entity is allowed to make the decision about how best to accomplish the goal of benefiting communities, and the 'sub-allocation' by the management entity is no longer the primary purpose of the program. This allays the legal concerns with creating a program in which the primary purpose is to provide an entity with the authority to annually re-allocate quota to individuals who will actually participate in the fishery. While changes to the purpose statement may not be desired, this may be a more straightforward method by which to mitigate the legal issues. If so inclined, the Council could include a transfer provision as part of the program, such that if an entity chooses to lease the quota to an individual to fish, it must be leased to an eligible community resident. This would retain the limitation on the use of CFQ that the Council supported in the current motion and purpose statement.

Finally, including the program as a statutory provision as described in (4) may be possible, as the entire Gulf rationalization program may require new legislation to implement. There are two issues to consider, however. First, the need for statutory authority to implement Gulf rationalization as a whole depends on the preferred alternative selected. Thus, if the rest of the package does not require new legislation, the Council may want to consider whether to adopt community provisions that would require separate Congressional authorization. Second, there remains some uncertainty with the overall feasibility of this option, as it raises the Constitutional issue of separation of powers, to which Congress is subject. Given these factors, NOAA GC should provide further guidance as to whether the Council could rely on this option if preferred.

In sum, if the Council wants to proceed with the CFQ Program, it could take action on any of these options or develop others to mitigate the legal concerns identified by NOAA GC at this October meeting. The Council is not, however, required to take any action at this time. Staff notes that option (3) may be sufficiently straightforward to address in a motion at this meeting; however, the Council may want to consider convening the GOA Rationalization Community Committee if options (1) or (2) are preferred. Option (4) would not require any Council action, but it is uncertain at this point whether it represents a feasible solution.

III. Preliminary data on potentially eligible communities

At its June 2005 meeting, in addition to making changes to the options provided for analysis, the Council requested that staff provide community groundfish catch data (excluding IFQ sablefish) at a subsequent meeting. The Council notified the public that after reviewing the catch data, a minimum landings threshold may be added to address community groundfish dependency. The remainder of this section summarizes the available groundfish (and non-groundfish) harvest data from 1993 to 2003, as well as some socio-economic data, for potentially eligible communities. This type of data will be provided and expanded upon in the EIS/RIR/IRFA required for this action. Note that the harvest data for a number of communities was consolidated or masked for confidentiality reasons.

At its June 2005 meeting, the Council adopted the GOA Rationalization Community Committee recommendations as outlined in March 30, 2005 committee report, with some modifications and additions. The current suite of options for the community programs is provided as **Attachment 1**. One of the Council recommendations was to make a minimum threshold for community eligibility in the CFQ Program that the community must have residents with commercial *groundfish* permit and fishing activity, as documented by CFEC some time during the period 1993 – 2002. The Council also recommended a minimum threshold for community eligibility in the Community Purchase Program: the community must have residents with *any* commercial permit and fishing activity, as documented by CFEC some time during the period 1993 – 2002. The option remains to further require that that participation be in the commercial groundfish fisheries.

Therefore, the current options for community eligibility in the CFQ and CPP are as follows:

<u>CFQ Program</u>	
C 1.3	Eligible communities
Option 1.	Population (based on 2000 U.S. Census) of less than 1,500 but not less than 25
Option 2.	Geography <ul style="list-style-type: none">a. Coastal communities without road connections to larger community highway networkb. Communities on the south side of the Alaska Peninsula that are adjacent to Central and Western GOA management areas (including Yakutat) within 5 nautical miles from the water, but not to include Bering Sea communities
Option 3.	Historic Participation in Groundfish Fisheries <ul style="list-style-type: none">a. Communities with residents having any groundfish commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002)

<u>Community Purchase Program</u>	
C 2.2	Eligible Communities
Option 1.	Population (based on 2000 U.S. Census) <ul style="list-style-type: none">a. Less than 1,500 but not less than 25b. Less than 7,500 but not less than 25
Option 2.	Geography <ul style="list-style-type: none">a. Coastal communities without road connections to larger community highway networkb. Communities on the south side of the Alaska Peninsula that are adjacent to Central and Western GOA management areas (including Yakutat) within 5 nautical miles from the water, but not to include Bering Sea communities included under the western Alaska CDQ Program.
Option 3.	Historic Participation in Groundfish Fisheries Communities with residents having any commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002). <ul style="list-style-type: none">a. Communities with residents having any groundfish commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002)
Option 4.	GOA (WG, CG, WY) communities eligible under GOA Am. 66

Given the eligibility criteria options above, two sets of eligibility tables are provided for each proposed program. **The first set of tables shows the potentially eligible communities for the CFQ Program. Table 1 lists the 26 communities that are eligible when the population and geography criteria are applied from Options 1 and 2. Table 2 shows that the list of eligible communities is reduced to 17 when the groundfish participation criterion under Option 3 is applied.**

The second set of tables identifies the potentially eligible communities for the Community Purchase Program. Table 3 lists the 31 potentially eligible communities when the population and geography criteria are applied from Options 1 and 2. Table 4 shows that the list of eligible communities is reduced to 20 when the Gulf groundfish participation criterion under Option 3a is applied. Note that if the fisheries participation criteria is not limited to groundfish, and is alternatively “communities with residents having any commercial permit and fishing activity as documented by CFEC in the last ten years” (Option 3), then four additional communities appear eligible. These communities are Akhiok, Cold Bay, Nanwalek, and Tyonek. The data indicate primarily salmon fishing activity in these communities, with limited halibut participation, during the 1993 – 2003 period.

The footnotes for each table provide further explanation on how the draft list of eligible communities was determined. Note that the fisheries participation criteria applied in Table 2 and Table 4 is commercial groundfish harvest by catcher vessels in the areas in which Gulf rationalization is proposed (WG, CG, WY). **If this is the intent of the eligibility criterion under C 1.3, Option 3, this option should be revised to clarify that only commercial Gulf (WG, CG, WY) groundfish harvests are considered. If that is the correct intent, the same clarification should be made for the Community Purchase Program, under C 2.2, Option 3a.**

Note also that the time period specified for fisheries participation in the options for both programs is “the last ten years (1993 – 2002).” At the time these programs were initiated, 2002 was the most recent data available. In this paper, staff provided the most recent data available to date, which includes 2003. **If the intent is to maintain the 1993 – 2002 time period in the options, 2003 can be excluded in future iterations. However, the lists of eligible communities provided in Table 2 and Table 4 would not change if 2003 was excluded.**

Note also that only harvests by vessels operating as catcher vessels were considered for determining community eligibility in the tables. The city of the skipper's residence as indicated on the CFEC permit was used to determine community residency and link residency to harvest (fishtickets). Harvests by vessels operating as catcher processors were not considered, as the options specify “fishing activity as documented by CFEC.”³ Catcher processors are not required to fill out fishtickets and the CFEC permit is not recorded on the weekly processor report. However, if a catcher processor acted as a catcher vessel and filled out a fishticket, that harvest was counted toward a community's landings. Finally, note again that the city of the skipper's residence (not mailing address) as indicated on the CFEC permit was used to determine community residency. Thus, the data does not account for crew member residency nor does it indicate the community to which the fish were delivered.

Because the community eligibility criteria are unknown until a preferred alternative is selected, socio-economic data are provided for the maximum number of communities that appear to qualify under the population and geographic criteria, i.e., the 31 unique communities listed in Table 3. Harvest data are provided for each of the 31 communities that had permit and fishing activity during 1993 – 2003. This represents a reasonable starting point to identify the universe of communities on which to provide data in the remainder of this section. None of these tables are intended to presuppose the eligibility criteria selected by the Council at final action; the tables are for illustrative purposes only.

³The overall rationalization analysis will provide catcher processor landings attributable to communities by vessel owner or LLP holder, but catcher processor harvests do not appear to be included for determining community eligibility at this time.

The following tables are provided in this section:

- Table 1.** GOA communities (26) potentially eligible for the CFQ Program, using population and geography criteria only
- Table 2.** GOA communities (17) potentially eligible for the CFQ Program, using population, geography, and fisheries participation criteria
- Table 3.** GOA communities (31) potentially eligible for the Community Purchase Program, using population and geography criteria only
- Table 4.** GOA communities (20) potentially eligible for the Community Purchase Program, using population, geography, and fisheries participation criteria
- Table 5.** Retained harvests (round lbs) of Gulf (WG, CG, WY) groundfish (excluding IFQ sablefish) and estimated ex-vessel values by community, 1993 – 2003
- Table 5a.** Percentage of the estimated ex-vessel value generated from WG, CG, WY groundfish harvests (excluding IFQ sablefish) attributed to Pacific cod, 1993 - 2003
- Table 6.** Retained harvests (round lbs) of groundfish outside of WG, CG, WY (and including IFQ sablefish) and estimated ex-vessel values by community, 1993 – 2003
- Table 7.** Retained harvests of non-groundfish (BSAI and GOA) by community, 1993 – 2003
- Table 8.** Estimated ex-vessel values for retained non-groundfish (BSAI and GOA) by community, 1993 – 2003
- Table 9.** Summary of estimated ex-vessel values attributable to potentially eligible communities from Gulf groundfish, non-Gulf groundfish, and non-groundfish, 1993 - 2003
- Table 10.** Description of location of 31 Gulf communities (23 in CG, 5 in WG, 3 in WY)
- Table 11.** Processing companies that filed an intent to operate in 2005 in potentially eligible GOA communities
- Table 12.** Demographic and economic statistics for 31 potentially eligible GOA communities

Table 1. GOA communities (26) potentially eligible for the CFQ Program, using population and geography criteria only

Draft list of WY, CG, and WG communities (recognized as places by the U.S. Census) that meet the following criteria: 1) population of fewer than 1,500; 2) no road connections to larger community highway network; and 3) within 5 nm of the Gulf coast. No fisheries participation criteria were used to develop this list.

	TOTAL	5,244				

¹Population is based on the 2000 U.S. Census.

²This means any location that the 2000 U.S. Census treats as a "place": either an incorporated community or a 'census designated place (CDP)' for unincorporated areas that are nonetheless recognized as place-level communities by the Census. This approach is consistent with the effort to profile fishing communities of the North Pacific by the NOAA staff at the Alaska Fisheries Science Center.

³Tatitlek is considered located in the West Yakutat area. Though located within PWS (Area 649), this community is inside the longitudinal line used to designate the WY (Area 640) and CG (Area 630) boundary.

⁴Yakutat is located on the boundary of WY and SEO, but is technically located within SEO (Gulf Area 650). Staff has included Yakutat in this list based on the Council's expressed preference to include Yakutat in community options for the Gulf rationalization program.

Table 2. GOA communities (17) potentially eligible for the CFQ Program, using population, geography, and fisheries participation criteria

Draft list of WY, CG, and WG communities (recognized as places by the U.S. Census) that meet the following criteria: 1) population of fewer than 7,500; 2) no road connections to larger community highway network; 3) within 5 nm of the Gulf coast; and 4) residents with any commercial groundfish (excluding IFQ sablefish) permit and fishing activity in WY, CG, or WG as documented by CFEC during the period (1993 - 2003)

¹This row combines harvests for Chignik, Chignik Lagoon, and Chignik Lake, for confidentiality purposes.

Note: Harvest data was compiled for each of the 31 communities that met the following criteria: population of less than 7,500; no road connections to larger community highway network; and within 5 nm of the Gulf coast. Only the 20 communities listed above showed any WG, CG, or WY groundfish harvests (excluding IFQ sablefish) as documented by CFEC fishtickets, 1993 - 2003. The city of the skipper's residence as indicated on the CFEC permit was used to determine community residency. Only harvests from vessels operating as catcher vessels are included. If a catcher processor operated as a catcher vessel, that harvest is included. IFQ sablefish data is excluded, as this fishery is not included in the proposed GOA rationalization. Data does not include harvest destined for meal production.

Note: Confidential data is indicated by **.

Table 5a. Percentage of the estimated ex-vessel value generated from WG, CG, WY groundfish harvests (excluding IFQ sablefish) attributed to Pacific cod, 1993 - 2003

Greater than 90%	8 communities
Greater than 50%	15 communities
Greater than 25%	16 communities

Source: CFEC fishtickets, 1993 - 2003.

Note: The universe of communities is the 20 noted above in Table 5.

¹This row combines harvests for Chignik, Chignik Lagoon, and Chignik Lake, for confidentiality purposes.

Note: Harvest data was compiled for each of the 31 communities that met the following criteria: population of less than 7,500; no road connections to larger community highway network; and within 5 nm of the Gulf coast. Only the 24 communities listed above showed any non-groundfish (halibut, salmon, other species, crab) retained harvests in any area as documented by CFEC fishtickets, 1993 - 2003. The city of the skipper's residence as indicated on the CFEC permit was used to determine community residency. Only harvests from vessels operating as catcher vessels are included. If a catcher processor operated as a catcher vessel, that harvest is included.

Note: Confidential or masked data is indicated by **.

Table 9. Summary of estimated ex-vessel values attributed to potentially eligible communities from Gulf groundfish, non-Gulf groundfish, and non-groundfish, 1993 - 2003

Description of fishery	Estimated ex-vessel value	% of total
Gulf (WG, CG, WY) groundfish excluding IFQ sablefish	\$278,354,462	17.2%
Non-Gulf groundfish including IFQ sablefish ¹	\$119,202,206	7.4%
Non-groundfish all areas	\$1,222,429,209	75.5%
Total	\$1,619,985,877	100.0%

Note: Ex-vessel values are from Tables 6 and 8.

¹Includes IFQ sablefish from all areas, including WG, CG, WY

Table 10. Description of location of 31 Gulf communities (23 in CG, 5 in WG, 3 in WY)

Community	Description of Location
CG	
Akhiok	at the southern end of Kodiak Island at Alitak Bay, 80 miles southwest of the City of Kodiak
Aleneva	on the southern coast of Afognak Island, north of Kodiak Island, on the coast of Raspberry Strait
Beluga	8 miles northeast of Tyonek, along Cook Inlet in the Kenai Peninsula Borough
Chenega Bay	located on Evans Island at Crab Bay, 42 miles southeast of Whittier in Prince William Sound, 104 air miles SE of Anchorage
Chignik	Chignik is located on Anchorage Bay on south shore of the Alaska Peninsula, lies 260 miles southwest of Kodiak
Chignik Lagoon	on the south shore of the Alaska Peninsula, 8.5 miles west of Chignik and 16 miles east of Chignik Lake
Chignik Lake	south side of the Alaska Peninsula next to the body of water of the same name, 13 miles from Chignik
Chiniak	45 miles southeast of the City of Kodiak, on the easternmost point of Kodiak Island
Halibut Cove	Kachemak Bay State Park on the Kenai Peninsula, 12 miles across the inlet from the Homer Spit
Karluk	west coast of Kodiak Island, on the Karluk River, 88 air miles southwest of Kodiak and 301 miles southwest of Anchorage
Kodiak	near the north eastern tip of Kodiak Island in the Gulf of Alaska
Kodiak Station	located on the western shore of Kodiak Island, south and adjacent to the City of Kodiak
Larsen Bay	on Larsen Bay, on the northwest coast of Kodiak Island, 60 miles southwest of the City of Kodiak
Nanwalek	southern tip of the Kenai Peninsula, 10 miles southwest of Seldovia and east of Port Graham
Old Harbor	southeast coast of Kodiak Island, 70 miles southwest of the City of Kodiak
Ouzinkie	on the west coast of Spruce Island, adjacent to Kodiak Island. It lies northwest of the City of Kodiak
Port Graham	7.5 miles southwest of Seldovia and 28 air miles from Homer
Port Lions	located in Settler Cove, 247 air miles southwest of Anchorage
Seldovia	on the Kenai Peninsula across from Homer on the south shore of Kachemak Bay
Seldovia Village	northeast of the City of Seldovia, across from Homer on the south shore of Kachemak Bay
Susitna	on the west bank of the Susitna River, at the foot of Mount Susitna, 30 air miles northwest of Anchorage
Tyonek	on a bluff on the northwest shore of Cook Inlet, 43 miles southwest of Anchorage
Womens Bay	on the west coast of Kodiak Island, 8 miles south of Kodiak
WG	
Cold Bay	in the Izembek National Wildlife Refuge at the western end of the Alaska Peninsula, 634 miles southwest of Anchorage
Ivanof Bay	northeast end of the Kupreanof Peninsula, 500 miles southwest of Anchorage and 250 miles southeast of Dillingham
King Cove	south side of the Alaska Peninsula, 18 miles southeast of Cold Bay and 625 miles southwest of Anchorage
Perryville	located on the south coast of the Alaska Peninsula, 275 miles southwest of Kodiak and 500 miles southwest of Anchorage
Sand Point	on Humboldt Harbor on Popof Island, off the Alaska Peninsula, 570 air miles from Anchorage
WY	
Cordova	southeastern end of Prince William Sound in the Gulf of Alaska, 52 air miles southeast of Valdez
Tatitlek	lies 30 miles east of Valdez by sea near Bligh Island
Yakutat	225 miles northwest of Juneau

Gulf of Alaska Rationalization Community Provisions

Revised as of June 5, 2005

It is the Council's intent that the Community Fisheries Quota (CFQ) Program and the Community Purchase Program (CPP) be the subject of standalone staff analysis for future inclusion in GOA groundfish rationalization alternatives as appropriate. The intent is not to create these programs as a trailing amendment, but to implement them at the same time GOA rationalization goes into effect.

Bering Sea/Aleutian Islands communities (CDQ or otherwise) and communities adjacent to the Eastern GOA regulatory area Southeast Outside District (except Yakutat) will not be included in any Gulf rationalization community provision programs.

PURPOSE: The Council recognizes the importance of providing economic stability for communities historically dependent upon GOA groundfish fisheries. Consistent with the guidance provided by the Consolidated Appropriations Act of 2001, National Standard 8, and the National Research Council Report, the Council acknowledges that rationalization programs can have significant impacts on fishing-dependent communities. Community provisions are intended to address community impacts resulting from rationalization and seek to provide economic stability or create economic opportunity in fishing-dependent communities, and provide for the sustained participation of such communities.

C 1. Community Fisheries Quota (CFQ) Program

The CFQ program would allocate a percentage of the annual Federal TAC to an administrative entity that would subsequently determine how to use the annual harvest privileges according to criteria established in Federal regulation. Depending upon the structure and restrictions established, the non-profit entity would use the shares to enable eligible communities to fish the shares. CFQ will be fished only by eligible community residents and will not be leased outside of the community to be used for other economic development.

The intent of the CFQ program is to mitigate the economic impacts of Gulf groundfish rationalization on small (less than 1500), isolated GOA communities with a historical dependence on groundfish. Further, it is the intent of the program to sustain current participation and access to the fisheries by those communities.

C 1.1 Administrative Entity

The administrative entity representing one or more eligible communities must be a non-profit entity qualified by NMFS. The administrative entity shall be:

- Option 1. A single Gulf-wide administrative entity.
- Option 2. An administrative entity for each GOA groundfish management area. (One WG entity and one CG entity. The CG entity includes CG and WY communities.)
 - Suboption 1. Community membership in each entity may be adjusted based on common culture and history considerations.
- Option 3. An administrative entity representing a group of communities with common culture and history.

If Option 2 is selected, the initial allocation of CFQ would be such that WG CFQ is allocated to the management entity representing WG communities, and CG and WY CFQ is allocated to the management entity representing CG and WY communities.

If Option 2 Suboption 1 or Option 3 is selected, the CFQ for a specific management area (WG, CG, WY) would be initially allocated to the management entity representing communities located in that area based on: 1) equal basis and/or 2) population. No more than 50% of the CFQ for any area can be allocated to the entity on an equal basis.

C 1.2 Board Representation of the Administrative Entity

The administrative entity shall be comprised of a Board of Directors as follows:

- Option 1. (Applicable with C 1.1, Options 1 – 3). Equal Board membership established by an equal number of appointed representatives from each Community Quota Entity's (CQE's) member communities. (Should the CQE represent more than one community, the CQE would appoint representatives to the administrative entity for each member community.)
- Option 2. (Applicable with C 1.1, Option 1). A 13-member Board represented by members of CQEs by region as follows: Aleutians East Borough (3 reps); Lake and Peninsula Borough (3 reps); Kodiak Borough (3 reps); Yakutat (1 rep); Chugach (2 reps); Cook Inlet (1 rep).
- Option 3. (Applicable with C 1.1, Option 1): The makeup of the administrative entity's Board of Directors shall reflect population, local participants' harvest history, and geography.

C 1.3 Eligible Communities

- Option 1. Population (based on 2000 U.S. Census) of less than 1,500 but not less than 25
- Option 2. Geography
 - a. Coastal communities without road connections to larger community highway network
 - b. Communities on the south side of the Alaska Peninsula that are adjacent to Central and Western GOA management areas (including Yakutat) within 5 nautical miles from the water, but not to include Bering Sea communities
- Option 3. Historic Participation in Groundfish Fisheries
 - a. Communities with residents having any groundfish commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002)

C 1.4 Species

- Option 1. All rationalized groundfish species including PSC
- Option 2. Pollock and Pacific cod and associated species necessary to prosecute the allocation of pollock and Pacific cod

C 1.5 Allocation

CFQ awarded to an administrative entity cannot be permanently transferred.

- Option 1. 5% of annual TAC
- Option 2. 10% of annual TAC
- Option 3. 15% of annual TAC

C 1.6 Timing of the CFQ Allocation

- Option 1. 100% of the CFQ is allocated at the implementation of the program
- Option 2. 66% of the CFQ is allocated at the implementation of the program
- Option 3. 50% of the CFQ is allocated at the implementation of the program
- Option 4. 33% of the CFQ is allocated at the implementation of the program

Under Options 2 – 4, there is a guarantee that 20% of the remaining allocation to the CFQ Program will be made each year, such that all of the CFQ would be allocated to the program after a 5-year period. The following suboptions are applicable to Options 2 – 4:

- Suboption 1. Remainder CFQ to be allocated from a 10% reduction of QS at first transfer (sale). If the annual minimum allocation has not been reached through transfer, the remainder will be ‘funded’ by creating new QS and adding it to the QS pool(s).
 - i. Attenuation at first transfer of QS does not apply to gift transfers between family members (first degree of kin).
- Suboption 2. Remainder CFQ to be allocated from a 5% reduction of QS at first transfer (sale). If the annual minimum allocation has not been reached through transfer, the remainder will be ‘funded’ by creating new QS and adding it to the QS pool(s).
 - i. Attenuation at first transfer of QS does not apply to gift transfers between family members (first degree of kin).

C 1.7 Harvesting of Shares

Harvesting of shares is limited to residents of any eligible community. The administrative entity may lease quota share to eligible community residents with vessels owned by, retained under a contractual arrangement with, or on which a community resident has an employment contract. However, residents of eligible communities located in a specific management area (WG, CG, WY) should receive priority over other qualified applicants in the leasing of community quota used in that specific management area.

C 1.8 Individual Use Caps and Vessel IFQ Caps

An individual leasing CFQ and use of CFQ on a vessel shall be limited as follows (caps would be species specific and exclusive of any quota individually owned):

- Option 1. No individual QS use caps and vessel IFQ caps for fishing CFQ
- Option 2. An amount equal to the individual QS use caps and vessel IFQ caps in the rationalized Gulf groundfish fishery
- Option 3. An amount equal to an approximation of what is needed for viable participation in the fishery (to be specified later)
- Option 4. An amount equal to 150% of the individual QS use caps and vessel IFQ caps in the rationalized Gulf groundfish fishery

Suboption 1 (applies to Options 2 – 4):

Use (25%, 50%, or 75%) of the selected use cap for Pacific cod. This cap is inclusive of any quota individually owned.

C 1.9 Sector Designation

All IFQ resulting from QS held by communities shall be designated for use on catcher vessels.

C 1.10 Landing Requirements

Landing requirements will be applied on a species specific basis.

- Option 1. CFQ shall have regional landing requirements proportional to the regional landing requirements applied for the remainder of QS issued for that species.
- Option 2. 50% - 100% of the CFQ shall have regional landings requirements
 - Suboption 1. in perpetuity
 - Suboption 2. for a period of 5 years
 - Suboption 3. for a period of 10 years

C 1.11 Use of Lease Proceeds by Administrative Entity

Use of lease proceeds is restricted to administrative expenses.

- Option 1. and purchase of additional GOA groundfish quota shares
- Option 2. and fisheries related investments
- Option 3. and investments in the economic development and social well being of member communities
- Option 4. and distribution to member community CQEs

(Applicable to Option 4.) Use of CFQ lease proceeds by member community CQEs is restricted to administrative expenses and:

- Suboption 1. purchase of additional quota shares
- Suboption 2. fisheries related investments
- Suboption 3. investments in the economic development and social well being of member communities

C 1.12 Distribution of Lease Proceeds to Member Communities

- Option 1. The administrative entity is not required to annually distribute lease proceeds to member community CQEs
- Option 2. The administrative entity is required to annually distribute lease proceeds to member community CQEs in an amount equal to or exceeding:
 - Suboption 1. 10% annual lease income after administrative expenses
 - Suboption 2. 20% annual lease income after administrative expenses
 - Suboption 3. 30% annual lease income after administrative expenses

C 1.13 Allocation Basis for Lease Proceeds

- Option 1. Lease income would be distributed at sole discretion of administrative entity.
- Option 2. 0% - 100% of the annual lease income distributed by the administrative entity to member community CQEs would be distributed amongst qualified communities on an equal basis.
- Option 3. 0% - 100% of the annual lease income distributed by the administrative entity to member community CQEs would be distributed amongst qualified communities on a pro rata basis based on population.

C 1.14 Qualification of Administrative Entity

The administrative entity must submit a detailed statement of eligibility to NMFS and the State prior to being qualified. The State may comment on the statement of eligibility but does not have a formal role. The required elements of the eligibility statement will be in regulation and, at a minimum, include:

- Option 1. identification of the community CQEs represented by the administrative entity
- Option 2. allocation criteria between regions, communities, and fishermen
- Option 3. documentation concerning accountability to the communities represented by the administrative entity.
- Option 4. procedures used to solicit requests from residents to lease CFQ
- Option 5. criteria used to determine the distribution of CFQ leases among qualified community residents and the relative weighting of those criteria.

C 1.15 Administrative Oversight

An annual report submitted to NMFS and the NPFMC detailing the use of QS by the administrative entity. The report should include findings of the administrative entity related to community resident vessel ownership, community resident contractual relationships with a vessel owner, and community resident employment on a vessel, in its leasing of CFQ to community residents. The required elements and timing of the report will be outlined in regulation.

C 2. Community Purchase Program

The CPP would allow a defined set of eligible communities to organize an administrative entity to purchase, hold, and use Gulf groundfish quota share within the rationalization program. In contrast to receiving an initial allocation, this provision would designate an administrative entity representing eligible communities as an eligible quota shareholder under the rationalization program, and that entity would be allowed to purchase GOA groundfish shares on the open market.

The purpose of the CPP is to provide the eligible communities with the opportunity to sustain their participation in the rationalized fisheries through the acquisition of Gulf groundfish fishing privileges. Further, it is the intent of the program to maintain and enhance current participation and access to Gulf groundfish fisheries by those communities.

C 2.1 Administrative Entity

The administrative entity representing a community or communities must be a non-profit entity qualified by NMFS, and may include administrative entities established under the BSAI Crab Rationalization Program for the community of Kodiak, Community Fisheries Quota (CFQ) administrative entities, a community quota entity under GOA Am. 66, or a non-profit established by the community of Cordova or Cold Bay, using criteria similar to Am. 66 qualification of CQEs.

C 2.2 Eligible Communities⁴

- Option 1. Population (based on 2000 U.S. Census)
 - a. Less than 1,500 but not less than 25
 - b. Less than 7,500 but not less than 25

- Option 2. Geography
 - a. Coastal communities without road connections to larger community highway network
 - b. Communities on the south side of the Alaska Peninsula that are adjacent to Central and Western GOA management areas (including Yakutat) within 5 nautical miles from the water, but not to include Bering Sea communities included under the western Alaska CDQ Program.

- Option 3. Historic Participation in Groundfish Fisheries
Communities with residents having any commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002).
 - a. Communities with residents having any groundfish commercial permit and fishing activity as documented by CFEC in the last ten years (1993 – 2002)

- Option 4. GOA (WG, CG, WY) communities eligible under GOA Am. 66

C 2.3 Qualification of Administrative Entity

The administrative entity must submit a detailed statement of eligibility to NMFS and the State prior to being qualified. The State may comment on the statement of eligibility but does not have a formal role. The required elements of the eligibility statement will be in regulation.

⁴Should the City of Kodiak meet the eligibility criteria selected at final action, residents of Chiniak, Kodiak Station, and Womens Bay would be allowed to lease quota from the administrative entity representing the City of Kodiak. Should the City of Seldovia meet the eligibility criteria selected at final action, residents of Seldovia Village would be allowed to lease quota from the administrative entity representing the City of Kodiak.

C 2.4 Administrative Oversight

A report submitted to NMFS and the NPFMC detailing the use of QS by the administrative entity. The required elements and timing of the report will be outlined in regulation and may include:

- Option 1. A summary of business, employment, and fishing activities under the program.
- Option 2. A discussion of any corporate changes that alter the representational structure of the entity.
- Option 3. Discussion of known impacts to resources in the area.

C 2.5 Ownership/Use Caps

Individual community Gulf groundfish QS/GH cap on purchased quota:

- Option 1. 3%
- Option 2. An amount equal to the individual cap in the general program by species
- Option 3. An amount equal to two times the individual cap in the general program by species
- Option 4. An amount equal to three times the individual cap in the general program by species

Aggregate community Gulf groundfish QS/GH cap on purchased quota:

- Option 1. 10%
- Option 2. 15%
- Option 3. 20%
- Option 4. 30%
- Option 5. 45%
- Option 6. No aggregate cap

Suboption 1 (applies to Options 1 – 5): Split the aggregate cap between communities eligible for the CFQ Program and communities not eligible for the CFQ Program. Any purchases by the CFQ management entity(ies) would be applied toward the CFQ community aggregate cap.

Note: It may be necessary to limit community acquisition of quota with a particular block and/or gear designation.

Attachment 2

DATE: October 3, 2003

FOR: Chris Oliver, Executive Director
North Pacific Fishery Management Council

THROUGH: Lisa Lindeman, Regional Attorney
NOAA General Counsel, Alaska Region *Lisa Lindeman*

FROM: Robert Babson, Attorney *RB*
NOAA General Counsel, Alaska Region

SUBJECT: Delegation of Authority and the Community Incentive Fisheries Trust Proposal.

As part of the Gulf of Alaska rationalization program, the North Pacific Fishery Management Council (NPFMC) is considering the Community Incentive Fisheries Trust (CIFT) proposal. The CIFT proposal involves an initial allocation of quota share (QS) to organizations representing communities located on the Gulf of Alaska. Under the proposal, these community organizations will then re-allocate the individual fishing quota (IFQ) derived from that QS on an annual basis to members of the community. Because the proposal is in its early stages, many of the details crucial to its implementation have not been developed. This memorandum discusses some of legal limitations the Council should consider in the development of those details.

Summary

While the Council could authorize allocations of QS to organizations representing communities and authorize such organizations to re-allocate IFQ annually, the authority thus delegated cannot be unlimited. Such sub-allocations of IFQ must be made subject to final approval by the Secretary. Any party aggrieved by such annual adjudications also would have a constitutional right to an agency appeal through the Office of Administrative Appeals before the agency can take final action on the recommendation.

Discussion

Under the Magnuson-Stevens Fishery Conservation and Management Act (FCMA), the Secretary's responsibilities and authorities can be classified under two broad categories: rulemaking and administrative implementation. The Secretary's rulemaking responsibilities are provided in section

304. For regulations implementing fishery management plan (FMP) amendments proposed by the various Regional Fishery Management Councils:

...the Secretary shall - (A) immediately commence a review of the plan or amendment to determine whether it is consistent with the national standards, and other provisions of the Act, and any other applicable law....

16 U.S.C. 1854(a). *See also*, 16 U.S.C. 1854(b). Once regulations establishing an FMP amendment are promulgated, the Secretary's responsibilities for the implementation of such amendments is provided in section 305(d) of the Act, to wit:

The Secretary shall have general responsibility to carry out any fishery management plan or amendment approved or prepared by him, in accordance with the provisions of this Act...

16 U.S.C. 1855(d).

Because of the novel aspects of the CIFT proposal, both its approval under section 304 of the Act, and its implementation under section 305(d), present unique legal concerns.

Rulemaking

Pursuant to sections 304(a) and (b) of the Act, in order for the Secretary to approve regulations establishing the CIFT proposal, he will have to determine that it meets the requirements of the national standards contained in the Act. 16 U.S.C. 1851. In addition, since the CIFT proposal is part of a limited access system, he also will have to determine that the proposal complies with the requirements of section 303(b)(6). 16 U.S.C. 1853(b)(6). The approval of the initial allocation of QS to the community organizations participating in the CIFT program should be fairly straight forward; it is the approval of that part of the proposal that calls for the annual re-allocation of IFQ that could be problematic. The latter will involve the approval of actions which, by definition, will not take place until some time in the future. It seems clear that in order for the Secretary to be able to review the regulations establishing the program pursuant to section 304 (a) and (b) of the Act, they will need to include a clear set of standards applicable to the annual re-allocation of IFQ to the individuals who will actually participate in the fishery. The Secretary can then review these standards for compliance with the Act.

Adjudication

Limited access systems involve "rulemaking" to establish the general standards to be used in

determining eligibility for initial issuance of QS. Once the standards for initial allocation are established by such rulemaking, it is then the Secretary's responsibility to apply those general regulatory standards to individual applicants. This is generally referred to as the process of "adjudication."¹ The adjudication of eligibility of applicants under limited access systems is an example of the responsibilities imposed on the Secretary by section 305(d) of the Act to "carry out" FMP's. As discussed above, the CIFT proposal differs from previous limited access systems implemented by the Secretary in that it proposes to delegate the annual re-allocation of IFQ from the Secretary to participating community organizations. The ability to delegate the Secretary's authority and responsibility under section 305(d) of the Act, however, is strictly limited.

The rules applicable to the delegation of administrative authority has been summarized as follows:

Administrative officers and bodies cannot alienate, surrender, or abridge their powers and duties, or delegate authority and functions which under the law may be exercised only by them; and although they may delegate merely ministerial functions, in the absence of statute or organic act permitting it, they cannot delegate powers and functions which are discretionary or quasi-judicial in character, or which require the exercise of judgment. [Emphasis added.]

¹ The Ninth Circuit Court of Appeals has differentiated between rulemaking and adjudication in the following manner:

A rule is:

[T]he whole or part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency.... 5 U.S.C. [section] 551(4). An adjudication (which results in an order) is virtually any agency action that is not rulemaking. 5 U.S.C. [section] 551(6)-(7). Two principal characteristics distinguish rulemaking from adjudication. First, adjudications resolve disputes among specific individuals in specific cases, whereas rulemaking affects the rights of broad classes of unspecified individuals. [Citations omitted.] Second, because adjudications involve concrete disputes, they have an immediate effect on specific individuals (those involved in the dispute). Rulemaking, in contrast, is prospective, and has a definite effect on individuals only after the rule subsequently is applied. [Citations omitted.]

Yesler Terrace Community v. Cisneros, 37 F.3d 442, 448 (9th Cir. 1994). In short, rulemaking involves the creation of new law/regulation, whereas adjudication involves the application of existing law/regulation to individual situations.

73 C.J.S., *Public Administrative Law and Procedure* [section] 56 a. (1983). Thus, the general rule is

... that when Congress has specifically vested an agency with the authority to administer a statute, it may not shift that responsibility to a private actor....

Perot v. Federal Election Com'n, 97 F.3d 533, 559 (D.C. Cir. 1996), *cert. den.* *Hagelin v. Federal Election Com'n*, 520 U.S. 1210. See also *Population Institute v. McPherson*, 797 F.2d 1062, 1072 (D.C. Cir. 1986); *Sierra Club v. Sigler*, 695 F.2d 957, 962-63 n.3 (5th Cir. 1983); *Pistachio Group of Ass'n of Food Ind. v. U.S.*, 671 F.Supp. 31, 35 (CIT 1987). Although these concerns are lessened when the delegation is of ministerial duties (*McCarthy v. Wood*, 245 F.2d 848, 853 (5th Cir. 1957)), they are of particular concern when the delegation involves either quasi-judicial (*Id.*) or discretionary functions. Various Courts have held that the adjudication of license applications² is both a "quasi-judicial" (*Johnson v. Independent Life & Accident Ins. Co.*, 94 F.Supp. 959, 961 (E.D. S. Car. 1951) and "discretionary" function (*Office of Communication of United Church of Christ v. F.C.C.*, 359 F.2d 994 (D.C. Cir. 1966), *appeal after remand* 425 F.2d 543).

One of the major concerns with the delegation of quasi-judicial functions to private parties concerns the Constitutional right of procedural due process. Normally, when the agency performs license adjudications, applicants have a constitutional right to an agency appeal.³ The agency's final action

² The Administrative Procedure Act defines "license" as including

...the whole or a part of an agency permit, certificate, approval, registration, charter, membership, statutory exemption, or other form of permission...

5 U.S.C. 551 (8). The APA also defines "licensing" as including

...agency process respecting the grant, renewal, denial, revocation, suspension, annulment, withdrawal, limitation, amendment, modification, or conditioning of a license...

5 U.S.C. 551(9). It is clear that an annual re-allocation of IFQ meets the definitions of licence and licensing, above.

³ It is clear that procedural due process, as provided under the Due Process Clause of the 5th Amendment of the U.S. Constitution, applies to agency adjudications, as defined under the APA, 5 U.S.C. 551 *et seq.* *Nuclear Data, Inc. V. Atomic Energy Commission*, 364 F.Supp.

on such appeals is then subject to judicial review under the APA. *Foss v. NMFS*, 161 F.3d 584, 588 (9th Cir. 1998). If the function of making adjudications were delegated to a private party, then parties aggrieved by such adjudications would have no such agency appeal right, and such adjudications would not be subject to review by the Courts under the APA. This sort of delegation of quasi-judicial authority to a private party has been uniformly rejected by the Courts. See generally *Pistachio Group of Ass'n of Food Ind. v. U.S.*, 671 F.Supp. 31 (CIT 1987).

The Courts' concern about delegations (sometimes referred to as "subdelegations") of quasi-judicial functions to private parties (such as the community organizations who would be allocated QS under the CIFT proposal) are lessened when agency and judicial review and control over those functions are retained. Compare *Texas Office of Public Utility Counsel v. F.C.C.*, 265 F.3d 313, 328 (5th Cir. 2001) with *Save Our Wetlands, Inc. v. Sands*, 711 F.2d 634, 641 (5th Cir. 1983); *Sierra Club v. Lynn*, 502 F.2d 43, 59 (5th Cir. 1974), cert. den. 421 U.S. 994. The United States Court of International Trade has stated:

The courts have consistently required subdelegations of significant functions to be checked by some form of review, either within the agency itself, or ultimately by the courts. Lower level procedural decisions generally require less oversight than decisions which affect the substantive rights of regulated parties, or which embody the agency's most potent use of its discretionary authority. In all cases cited by the parties, however, courts were willing to approve subdelegations only if they ultimately were subject to some form of scrutiny.

* * * * *

Such a decision cannot be abandoned to an independent agency with private sector components, and isolated from all types of review, administrative or judicial, merely for reasons of convenience.

Pistachio Group of Ass'n of Food Ind. v. U.S., supra at 37. The Court went on to state

...the availability of administrative and judicial review may cause a court to conclude that no delegation has occurred. [Citation omitted.]

* * * * *

By finding that "no delegation has occurred" rather than finding that a given delegation is proper, courts may avoid answering difficult separation of powers and related questions or objections to the degree of power transferred.

423, 425 (D.C.D.C. 1973). It is also clear that agency permit decision making is an adjudication under the APA. *National Wildlife Federation v. Marsh*, 568 F.Supp. 985, 992 n. 12 (D.C.D.C. 1983).

***Id. at 39.* Absent a statutory provision for direct judicial review of annual IFQ adjudications made by community organization participating in the CIST program, the only judicial review possible would be for "final agency action" under the APA. In order to have such "final agency action," the annual IFQ adjudications must be made subject to agency review and Secretarial approval.**

To: North Pacific Fisheries Management Council
Re: C-6 GOA Groundfish Rationalization
From: Fish Heads, an advocacy group for Fishermen,
Families, and Coastal Alaskans
We suggest the following:

1. Processor Compensation:

A.) Stranded capital issues should be addressed with a one time buy out program, not by restricting the free market.

B.) **If linkages between the trawl fleet and processors are inevitable, *the fixed gear fleet*, with its more ecologically sound methods, manned by smaller, mostly local boats, delivering a higher quality product should be restricted in no way from pursuing any market, or exploring new ways to fish better, and cleaner.**

2. Skipper and Crew Documentation:

We would like to propose that all skippers and crew be documented for purposes of identifying long term participants of rationalized fisheries. All fishermen on every catcher boat must be listed on every fish ticket. In this way, independent contractors with a history of participation could be factored in as fisheries are further rationalized. Further, an effort must be made to identify skippers and crew displaced by Bering Sea crab rationalization.

3.) Once identified, we suggest their investment in the industry, and the disenfranchisement visited on them by rationalization, be addressed in the following ways:

BUY BACK MY BACK

The lack of recognition of crew as stakeholders, and the minimal compensation offered to skippers has never been justified. Every argument offered to support the awarding of shares to processors applies to skippers and crew, who pay, on average, 35% of a boat's daily operating expenses, plus the cost of their own equipment, and the investment of many hours of labor, for what is only a *chance* to make money. If they were wage earners, with the owners taking all the risk, making all the investment, and therefore taking all the profit, they would have no claim. But they are not. **Fishing is a venture, undertaken by contractually linked businessmen, three quarters of which are skippers and crew.**

Therefore, a "Buy Back My Back" program should be implemented to compensate long term participants in the industry:

A long term participant is defined as a skipper or crewman who fulfils his/her full seasonal contractual obligations.

I. Qualifying crewmen would be assigned one point for each of the IFQ qualifying years in which he fulfils his contractual obligation, Skippers two points. Acknowledging that Skipper/Crew often move from boat to boat, while also requiring contractual fulfillment for qualification recognizes the fluid nature of skipper/crew employment dynamic, while also recognizing the importance of dependable professionals. Qualified participants could receive a one time payment, amount depending on number of points, funded in a way similar to the vessel buyback program. This purpose of this payment would be to enable excess Skipper/Crew to leave the industry, or for those wishing to remain to buy into the industry. Alternately, those Skipper/Crew able to remain in the industry could convert their points into harvest quota to be added to that of the catcher vessel.

II. A second alternative: Reserve a share of the quota similar to the traditional share taken by Skippers and Crew. This "Slice of Pie" would be harvested like a Community Development Quota, with the proceeds distributed according to amount of points held. The quota should be harvested by local fixed gear vessels under 60 feet, to ensure the continued health of coastal communities, and the ecosystem.

Such a program would address issues of equitable distribution of the resource to all stakeholders in the industry as well as fostering a stable, professional pool of harvesters.

By allowing local fixed gear harvesters a chance to supply a free market, and recognizing skippers and crew as stakeholders, the resource can be linked to the local harvesters and the coastal communities for whom fish is their life's blood. We strongly urge that these changes be seriously considered as you refine the alternatives for GOA Groundfish and implement the BSAI crab rationalization plan.

C-6 GOA Groundfish Rationalization
Inside three mile history

Chair Madsen and Council Members

My name is Chris Holland and my husband Ken and I own the 72 foot F/V Point Omega. We live and work out of Kodiak. Ken is the primary operator and has been fishing in Alaska since 1963. He began fishing p. cod with pots in 1987 making him one of the first in this fishery.

We have earned approximately 95% of our GOA p. cod history fishing on the federal TAC during a federal season first with a FFP and then with an LLP.

We come here today to ask you to understand our position and how badly we feel we will be disadvantaged if the State of Alaska is allowed to pre-empt our federal history. In the past the State has made rules that put boats of our size at an economic disadvantage. (We are cut out of other cod fisheries around the state by the 58' rule and even in Kodiak where we pioneered the fishery we are limited in the amount of cod we can catch by a size restriction on the quota.)

What we are asking is that you find a way to include us in the federal program. We believe Option 3 under 2.2.2.3 will make this possible. The State has not formed a program that will ensure that we are treated equally with the vessels who fished the same federal seasons on the same federal TAC and under the same federal rules as we did. We want our history to be included in the federal program and feel that we are equally dependent on both the federal cod we catch and the cod we catch during the 25% State season. I guess you could say we are co-dependent.

We are totally against rationalization going ahead in the trawl sector separately from the rest of the fisheries. We feel that it all needs to proceed together for the best outcome but there are different fits for everyone. We wish to be included in the ongoing federal rationalization program along with all other sectors.

We are long time residents of Alaska and our family's future is going to be forever changed by what can be one small decision in this process. Please take into consideration the affects that disadvantaging the mid-size operation will have on the coastal communities.

If nothing else grandfather us into the federal program due to the fact that we are of a vessel size that is discriminated against by the State of Alaska.

In 1976 Ken was in Washington DC helping to get the Magnuson Act put into effect to gain rights for the American fisherman, which established the Council and made it possible for all development of American fisheries in the EEZ. He has worked long and hard for our Groundfish history that now seems to be slipping away along with our family's future. This is a matter of great importance to us, our family and all the people who are so interlinked in GOA coastal communities. We are totally dependent on fishing and wish to remain fishermen.

Thank you for your time and consideration in this matter.

Ken and Chris Holland

 Ted Stevens
 U.S. Senator for Alaska

Motion to Support Coordinated Federal/State GOA Groundfish Rationalization

12/04

The North Pacific Fishery Management Council (NPFMC) and the State of Alaska share the goal of creating a management system for Gulf of Alaska (GOA) groundfish fisheries on stocks that are migratory across jurisdictional lines that:

- Increases efficiencies, resulting in economic benefits and stability
- Improves safety
- Improves stock conservation
- Reduces bycatch
- Reduces gear conflicts

It is unlikely that these goals can be achieved unless the GOA groundfish fisheries are rationalized in both state and federal waters.

Therefore, the NPFMC acknowledges and supports the efforts of the State of Alaska to develop a management system in state waters that coordinates with a management system in federal waters to assure that the following mutually critical issues can be satisfactorily addressed while meeting the shared goals stated above:

- Management and data costs
- Enforcement costs
- Endangered Species Act issues
- Observer coverage and costs
- Bycatch, incidental take, and prohibited species caps
- Community provisions (that the state is constitutionally prohibited implementing)
- Essential Fish Habitat/HAPC

In order to achieve an integrated and coordinated federal/state management system for GOA groundfish fisheries across jurisdictions, the NPFMC supports the State of Alaska's pursuit of legislative authority enabling the Alaska Board of Fisheries (BOF) to implement a dedicated access program, such as those currently under consideration by the NPFMC for GOA groundfish. For GOA groundfish, such authority would confer upon the BOF the authority to allocate fishery resources on the basis of historical landings to skippers, crew, vessel owners, or other entities, by fisheries, as deemed appropriate. Further, it would authorize either the BOF or the Commercial Fisheries Entry Commission (or some combination of the two) to provide access to such fisheries. Authority would also be sought allowing the BOF to allocate fishery resources to cooperatives. Provision of such authority would enable the BOF to implement—if ultimately approved by the BOF—a management program coordinated with the NPFMC, as long as such a program meets Alaska's constitutional mandates.

Further, the NPFMC acknowledges Alaska's constitutional mandates and constraints, and to the extent possible and desirable, will attempt to accommodate them in the interest of seeking a mutually beneficial federal/state management program for GOA groundfish fisheries.

CITY OF UNALASKA

September 30, 2005

Stephanie Madsen, Chair
North Pacific Fishery Management Council
605 W 4th Avenue Suite 306
Anchorage, Alaska 99501

Subject: C-5 BSAI Pacific Cod Allocation

Dear Chair Madsen:

On behalf of the City of Unalaska, I am writing to you today in support of the Unalaska resident 60' and under fixed gear and jig fleet on their concerns with the proposals listed under issue C-5 Bering Sea Aleutian Island Pacific Cod Allocation.

The local fleet does not support their sector requiring the 60' and under fixed gear and jig fleet to comply with qualifying years and catch history requirements in order to be able to participate in this fishery. The local Unalaska fleet prefers that this fishery stay open access or status quo in nature and continue as an entry level fishery, not just for the Unalaska small boat fleet, but also for other 60' and under vessels from other communities in Southwest Alaska that fish cod in this area. We support our local fishers in their request to be exempt under Component 5, section 5.2, and we support their request that the language in 5.21 be deleted. The majority of Unalaska's fishers feel that requiring them to comply with qualifying years and actual catch history requirements would disenfranchise them from a fishery that takes place right at their front door. The qualifying years and catch history requirements that are under consideration would mean the majority of the qualifying vessels that work this fishery would come from outside the community Unalaska. This would force local harvesters that want to enter this fishery to purchase someone else's LLP license to fish, which would not only be very costly, but would also mean the jig rollover provision would be of little benefit to the local Unalaska fixed gear fleet.

This issue is of further concern to the local fixed gear fleet because of the changes made to the Pacific Cod rollover provision in Amendment 77. This provision, which just went into effect during last year's fishing season, allows the jig quota, which is 2% percent of the TAC, to be rolled over to the 60' and under pot and hook-and-line vessels first. The rollover from the jig sector, plus the fixed gear 60' and under allocation of 1.4% of the Pacific Cod fixed gear TAC, has turned this fishery around by providing enough quota to allow for a much longer fishery, attracting more local

vessels to participate in the fishery, and opening up more markets with higher ex-vessel prices for this fleet. We ask that the Council look at this fishery to see if there really is a need for it to have qualifying years and catch history requirements. We certainly feel that this fishery doesn't warrant these types of restrictions at this time.

We support the continuation of the 2% allocation for the jig fleet it is important that this stay in place. In addition, we support the added section 5.3 that changes the jig allocation apportionment to 60% allocation of cod in the first trimester, followed by allocations of 20% in the second and third trimesters. This change will be very helpful to the local fixed gear fleet by providing more rollover cod during the best fishing time of the year.

As a community, we feel that if this fishery stays in an open-access mode it will provide entry level opportunity for local harvesters, and it will play an important part in the development of a small boat fleet for this community. We see this sector as an area where there will be some growth during the next few years. Eighteen pot and longline vessels participated during the 2005 fishery in the Pacific Cod 60' under fixed gear sector. That is seven more vessels than in the previous year, and most of that increase came from local Unalaska vessels. The City's \$23 million boat harbor should be under construction in the spring of 2007, and that will provide moorage and services for many vessels in this sector. The harvesters in the small boat sector are an important part of the community. Many of them are landowners in the community and support our local businesses. We would expect, as this fishery expands, that vessel owners from other communities may setup operations in Unalaska and invest in the community. For these reasons and more, we will continue to support this fishery being kept as open access and having the entry level opportunities. We will also continue to support having the 60' and under fixed gear and jig fleet be exempt from qualifying years and catch history requirements.

Once again, Madam Chair and Council Members, we thank you for taking the time to consider our comments on this issue that is of the utmost importance to the community of Unalaska.

Sincerely

Frank Kelty,
Resource Analyst
City of Unalaska

C-6 GOA Groundfish Rationalization
Inside three mile history

Chair Madsen and Council Members

My name is Chris Holland and my husband Ken and I own the 72 foot F/V Point Omega. We live and work out of Kodiak. Ken is the primary operator and has been fishing in Alaska since 1963. He began fishing p. cod with pots in 1987 making him one of the first in this fishery.

We have earned approximately 95% of our GOA p. cod history fishing on the federal TAC during a federal season first with a FFP and then with an LLP.

We come here today to ask you to understand our position and how badly we feel we will be disadvantaged if the State of Alaska is allowed to pre-empt our federal history. In the past the State has made rules that put boats of our size at an economic disadvantage. (We are cut out of other cod fisheries around the state by the 58' rule and even in Kodiak where we pioneered the fishery we are limited in the amount of cod we can catch by a size restriction on the quota.)

What we are asking is that you find a way to include us in the federal program. We believe Option 3 under 2.2.2.3 will make this possible. The State has not formed a program that will ensure that we are treated equally with the vessels who fished the same federal seasons on the same federal TAC and under the same federal rules as we did. We want our history to be included in the federal program and feel that we are equally dependent on both the federal cod we catch and the cod we catch during the 25% State season. I guess you could say we are co-dependent.

We are totally against rationalization going ahead in the trawl sector separately from the rest of the fisheries. We feel that it all needs to proceed together for the best outcome but there are different fits for everyone. We wish to be included in the ongoing federal rationalization program along with all other sectors.

We are long time residents of Alaska and our family's future is going to be forever changed by what can be one small decision in this process. Please take into consideration the affects that disadvantaging the mid-size operation will have on the coastal communities.

If nothing else grandfather us into the federal program due to the fact that we are of a vessel size that is discriminated against by the State of Alaska.

In 1976 Ken was in Washington DC helping to get the Magnuson Act put into effect to gain rights for the American fisherman, which established the Council and made it possible for all development of American fisheries in the EEZ. He has worked long and hard for our Groundfish history that now seems to be slipping away along with our family's future. This is a matter of great importance to us, our family and all the people who are so interlinked in GOA coastal communities. We are totally dependent on fishing and wish to remain fishermen.

Thank you for your time and consideration in this matter.

Ken and Chris Holland

North Pacific Fishery Management Council

Re ; Agenda Item C-6 GOA Rationalization

Dear Madam Chair,

I am here today On behalf of the 400 plus members of the Crewmens Association. We are a loosely organized group of professional fishermen woking in a diversity of fisheries in the Gulf of Alaska and the Bering Sea. The viability of this work force is a large part of what makes our communities thrive. We constitute the trickle down system that brings fisheries revenue to the people and businesses on shore.

Our primary concerns are that the majority of actual harvesters, skippers and crew are not meaningfully included in the privatization of our public resources, and that our free markets will be replaced with forced processor linkage or processor harvest quota allocations.

These are some of our proposals for the rattionalization of GOA groundfish;

1. Recognition and documentation of skippers and crewmen actively participating in harvest be be made manditory.

A. A participant registrar be implemented, showing fishing license or permit card number, Share percentage and dates of obligation for every delivery.

B. Submission of mandatory crew contracts by boat owners be used to show participation in fisheries prior to formation of such a registrar

C-6 2.2.8 skipper and crew allocation

2. Include skippers and crew in the allocation of fishing privillages.

A. Allocations should mirror share percentage of product harvested during qualifying years.

- B. Allocations should be independent of vessel and vessel caps.
- C. Allocations be transferable only among active qualifying crew and skippers.
- D. Leasable only by initially allocated skippers and crew.
- E. Transferable to licensed crew or permit holding skippers without historic participation with mandatory owner on board provisions.

This would allow for entry level participation

- 3. Establish historic fleetwide average skipper and crew share.%.
 - A. Per fishery
 - B. per gear type
 - C. Per vessel size

Use this average to establish value of allocation undocumented [by owner] or unclaimed [by s/crew]

4. Unclaimed allocation should be set aside in a pool to be leased by active skippers and crew with the lease proceeds to be used as a loan base for entry level skippers and crew and re education of fishermen displaced by consolidation and co ops.

5. P/Q or forced processor linkages should not be implemented without an independent study showing necessity and effect.

6. A review of the effects of Crab Rationalization and co ops should be undertaken before the 18 month point; crabbers cant wait 18 months... who could if suddenly unemployed? Document socioeconomic effects season by season.

7. Stop forward movement on GOA Rationalization until an allocation distribution program fair and equitable to all participating harvesters can be implemented.

8. Insertion of proposal 2.2.8 into Alternative 3 would safeguard skippers and crew to some extent.

9. A formal inquiry or independent study into transfer pricing should be undertaken to avoid possible WTO repercussions.

Thank you for your consideration, our communities and our livelihoods depend on your fair and equitable treatment of all participating harvesters of our fisheries resources.
