

Assessment of Occupational Hazards in the Alaskan Halibut/Sablefish Fleet

North Pacific Fishery Management Council Meeting
October 8, 2016

Samantha Case, MPH | Devin Lucas, PhD | Laura Syron, MPH

The findings and conclusions in this presentation have not been formally disseminated by CDC/NIOSH and should not be construed to represent any agency determination or policy.

DEPARTMENT OF HOMELAND SECURITY U.S. Coast Guard REPORT OF MARINE CASUALTY			
SECTION I. GENERAL INFORMATION			
1. Official No.	2. Official No.	3. Nationality	4. Call S
5. Proprietary	6. Length	8. Gross Tons	9. Year Built
10. Proprietary	12. Draft (Ft. - in.) FWD AFT.	13. If Vessel Classed, By Whom: (ABS, LLOYDS, DNV, BV, etc.)	14. Date
17. Estir			VE
Operating Co.			

Hazard Assessment

Crewmember fatalities:

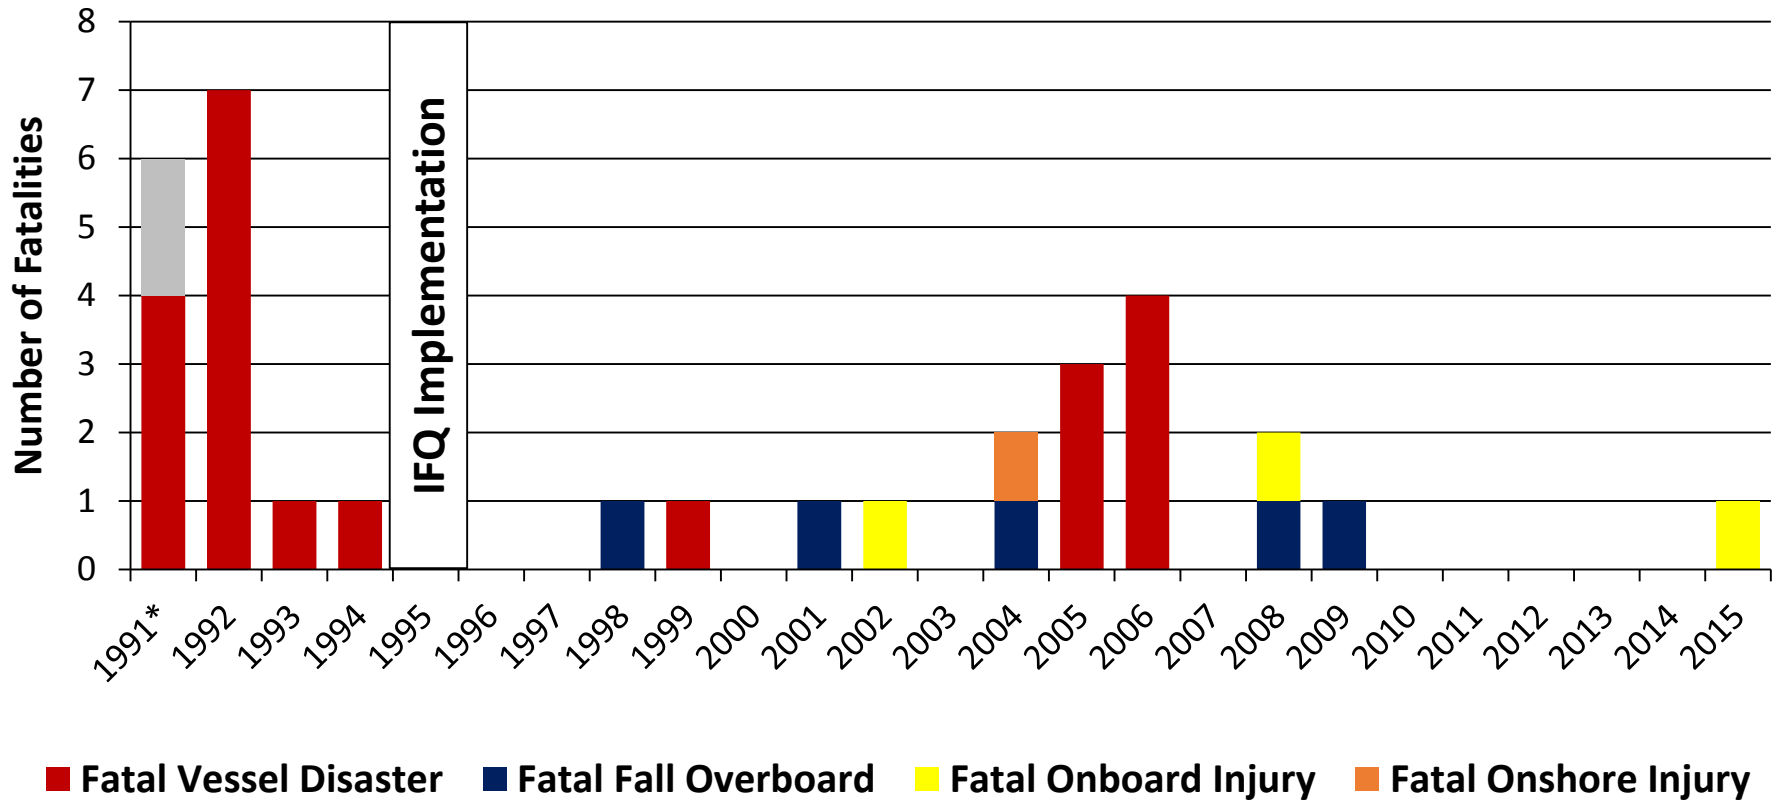

- Previous study by Lincoln, Mode, & Woodley (2007): **1991-2000**
- More recent data: **2001-2015**
- Fatality rates (# of fatalities/100,000 FTEs)
 - FTEs account for number of vessels, workers, and days at sea
- Test for trend in fatality rates

Vessel disasters:

- Fatal and nonfatal: **2001-2014**

Number and causes of fatalities in the Alaskan halibut/sablefish fleet, 1991-2015 (n=32)

*Incident type unknown for two fatalities

Fatality rates and trend in the Alaskan halibut/sablefish fleet, 1991-2015

Causes of fatalities in the Alaskan halibut/sablefish fleet, 2001-2015 (n=15)

Initiating causes of vessel disasters in the Alaskan halibut/sablefish fleet, 2001-2014 (n=27)

87 crewmembers at risk; 7 deaths

Recommendations

To prevent and survive **vessel disasters...**

- Keep vessels and systems well-maintained and watertight
- Participate in marine safety training
- Conduct monthly drills

To prevent fatal **falls overboard...**

- Wear PFDs on deck
- Create/enforce PFD policy
- Conduct monthly drills
- Use effective recovery devices

Limitations

- Timeline is imbalanced
 - Limited pre-IFQ data
- FTE estimates include average number of crewmembers
- Additional safety measures can be considered
 - Nonfatal injuries
 - Vessel safety issues

Conclusions

- IFQs allow for longer fishing seasons, more experienced crews, and flexibility on when to fish
- While trend in risk was minimal, other factors outside of fishery management policies may be responsible for fatalities
- Important to continue to research and address persistent hazards (vessel disasters, falls overboard)
