

Feb. 2021

CLIMATE CHANGE TASK FORCE WORKPLAN OVERVIEW D3 COUNCIL

CCTF Members:

Co-chair: Diana Stram (NPMFC): diana.stram@noaa.gov

Co-chair: Kirstin Holsman (NMFS- AFSC) : kirstin.holsman@noaa.gov

Lauren Divine (Aleut Community of Saint Paul Island)

Scott Goodman (Natural Resources Consultants/BS Fisheries Res. Foundation)

Joe Krieger (NMFS-Regional Office)

Mike LeVine (Ocean Conservancy)

Steve Martell (SeaState)

Brenden Raymond-Yakoubian (Sandhill Culture Craft)

Jeremy Sterling (AFSC Marine Mammal Lab)

CCTF MEETINGS TO DATE

- Work in 2020
 - January: spin up meeting and update to Council bodies (Ecosystem Committee, SSC/AP/Council)
 - February CCTF meeting 2:
 - Initial development of framework and proposed process
 - Initial draft of work plan
 - Update to FEP (March meeting)
 - December CCTF meeting 3

ATTENDEES DEC. 14 & 16, 2020 (VIRTUAL)

Taskforce members in attendance:

Lauren Divine (Aleut Community of Saint Paul Island), Scott Goodman (Natural Resources Consultants/Bering Sea Fisheries Research Foundation), Kirstin Holsman co-Chair (AFSC-Seattle), Steve Martell (SeaState), Joe Krieger (NMFS-Regional Office), Brenden Raymond-Yakoubian (Sandhill.Culture.Craft), Mike LeVine (Ocean Conservancy), Jeremy Sterling (AFSC Marine Mammal Lab), Diana Stram co-Chair (NPFMC)

Members of the public and other state and agency staff:

Diana Evans (NPFMC), Sarah Wise (AFSC-Seattle), Kate Haapala (NPFMC), Steve Marx, Melissa Parks, Megan Williams, Mateo Paz Soldan, Erin Shaw, Steve MacLean (NPFMC), Teresa Peterson

Goals of CCTF3:

- Review progress since CCTF2
- Finalize draft Work Plan for review

The goal of the Climate Change Module is to facilitate the Council's work towards climate-ready fisheries management that helps ensure both short- and long-term resilience for the Bering Sea.

Key: Action informing NOT policy prescriptive

Key: Seeks to use existing “on ramps” to deliver climate information to Council process

Key: Iterative process that will be refined over time with input and feedback

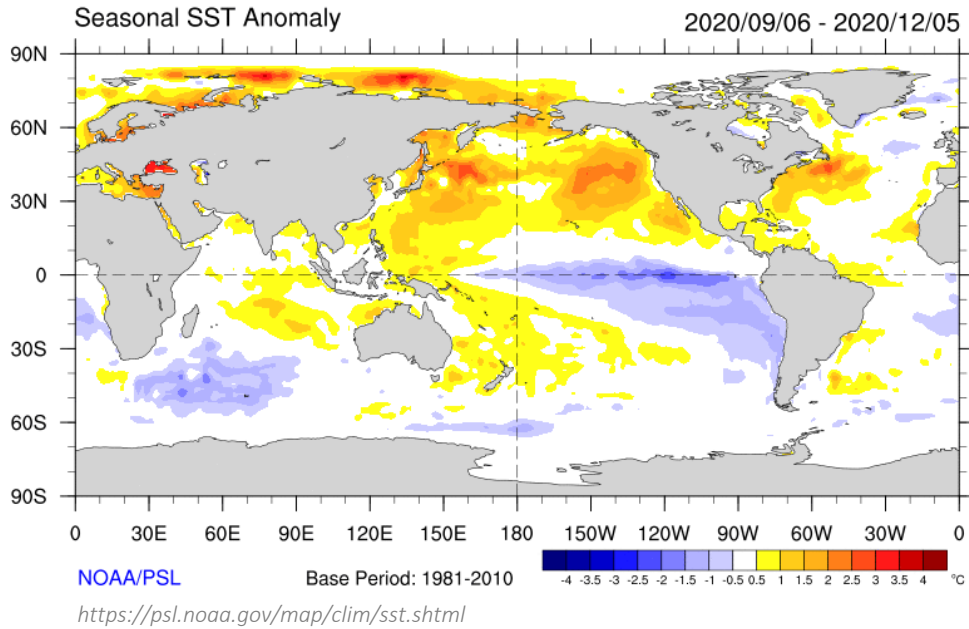

Key: Inclusive approach to provide Council process with “the best available” information on climate impacts and effective adaptation actions to reduce impacts.

BACKGROUND

Background: Climate change is altering the Bering Sea ecosystem

Anomaly from 1901- 2000 climatology
1 degree, weekly resolution; September

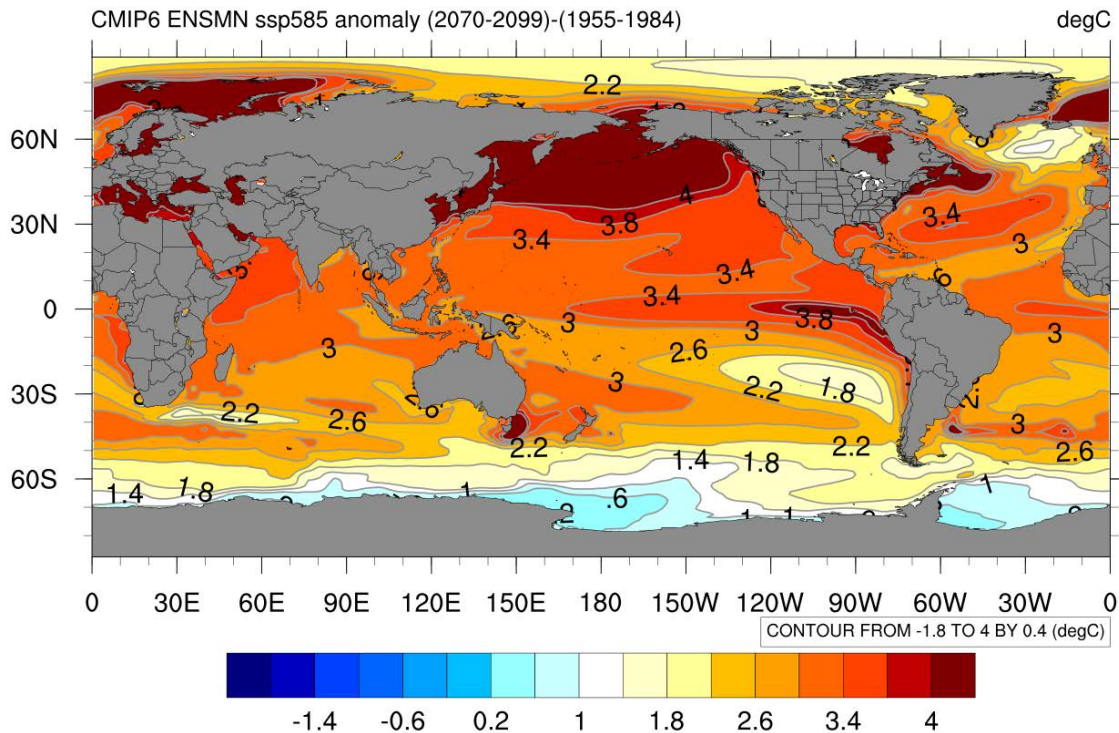

NOAA National Centers for Environmental information, Climate at a Glance: Global Time Series, published November 2020, retrieved on December 9, 2020 from <https://www.ncdc.noaa.gov/cag/>

Background: Future changes to the Bering sea are expected

Changes in Sea Surface Temperature

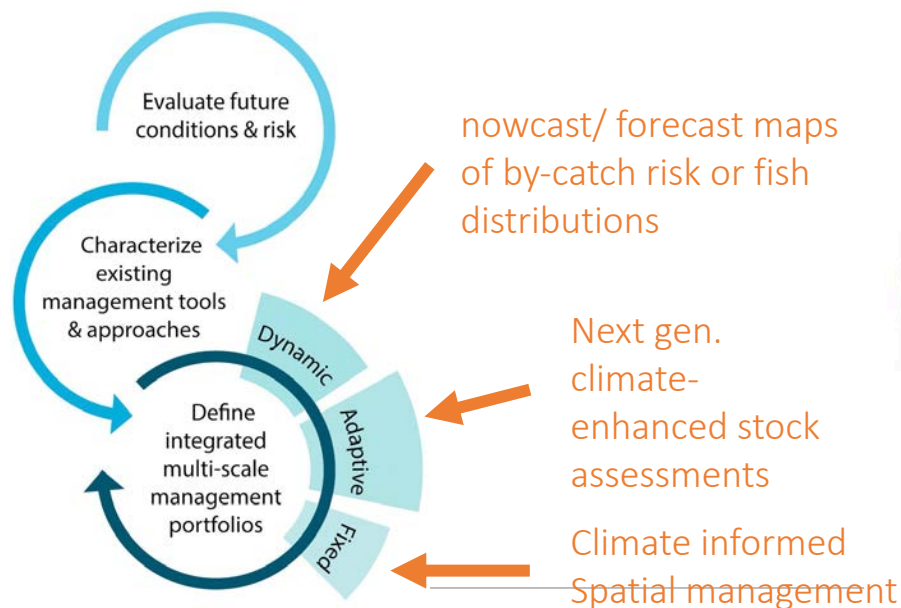

CMIP6: SST Anomaly from 1955-1984 climatology

<https://psl.noaa.gov/ipcc/cmip6/>

Background: Management can reduce impacts & support adaptation

✓ Build climate-informed process

Technical workplan

What: Task Force Goals:

The CCTF aims to **operationalize the delivery of climate change information to the Council** including climate change information, tools, and recommendations that can help the Council **further its ecosystem vision statement through equitable climate change adaptation pathways, transparent communication, utilization of diverse knowledge sources, and broad engagement. This module will support the Council's capacity to:**

- 1. More effectively incorporate climate change information** from diverse knowledge holders into the fishery management process through transparent, effective and dynamic communication and engagement with communities, fishers, managers, scientists and other Council stakeholders with the Council and Council staff; and,
- 2. Evaluate and implement management measures that can help** preserve livelihoods, economies, health and well-being across fisheries and dependent coastal communities; support near- and long-term adaptation to climate change; and ensure the continued productivity and sustainability of the coupled social-ecological Bering Sea system.

How: Iterative process of review & synthesis

Collate Info

Synthesize

Communicate

- Objective 1: Coordinate the review of existing and emergent climate information on impacts, adaptation, and residual risk.
- Objective 2: Assess key climate change impacts, adaptation actions, and residual risk.
- Objective 3: Summarize and communicate potential risks and adaptation actions.

How: Iterative process of review & synthesis

Step 1:

- ~~Objective 1:~~ Coordinate the review of existing and emergent climate information on impacts, adaptation, and residual risk.

Step 2:

- ~~Objective 2:~~ Assess key climate change impacts, adaptation actions, and residual risk.

Step 3:

- ~~Objective 3:~~ Summarize and communicate potential risks and adaptation actions.

Collate Info

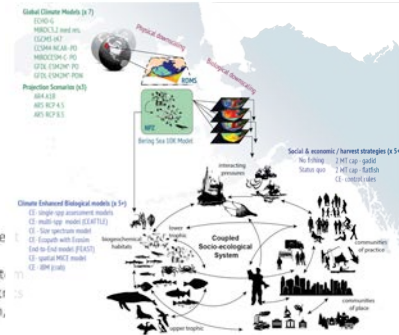

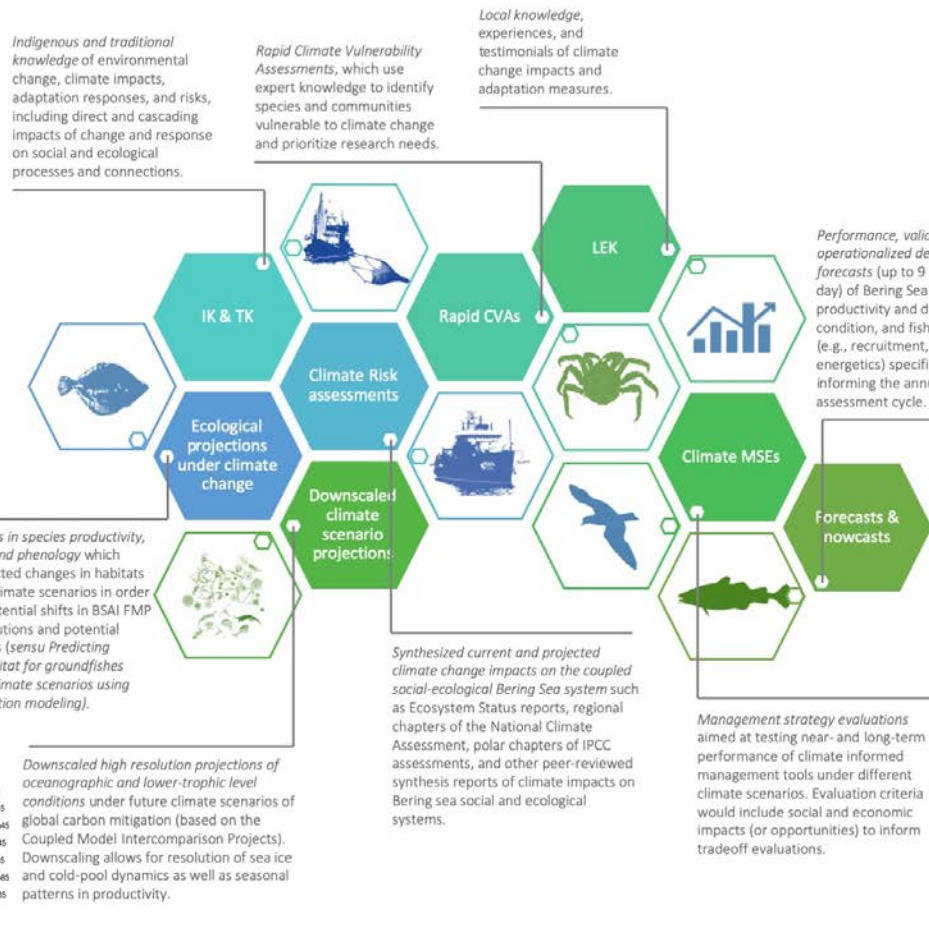

Synthesize

Communicate

Examples of sources of climate information (Fig. 5)

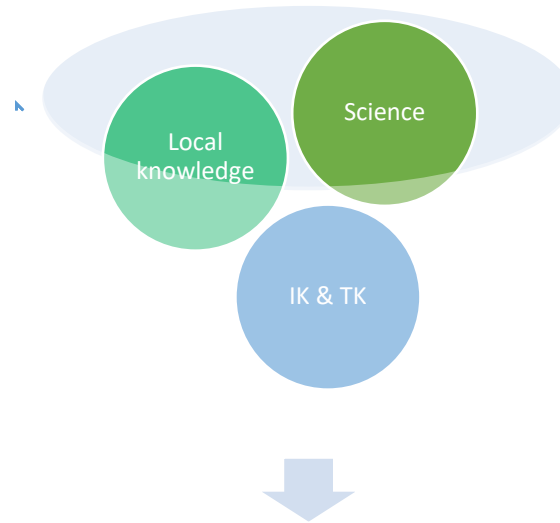

What: Streamline, summarize, and organize information

Step 1: Collate Info

Step 2: Synthesize

Step 3: Communicate

Climate Change Impacts & adaptation information

CCTF additional products

(Iteratively developed & refine now-2025):

- Synthesis Report Appendices:
 - Table of climate change drivers, impacts, potential policy/management responses, targets, and gaps/needs
 - SES Adaptation Briefing Note
 - SES Resilience Briefing Note
 - ~~Climate Briefing Form and Process~~
 - ~~Adaptation and Climate Testimonial workshop summaries~~

- Coordination with LK/TK/Subsistence Taskforce and the BS FEP Team to communicate issues/topics of joint relevance

- Periodic updates with SSC, Plan Teams, and Ecosystem Committee to provide interim synthetic climate information

Every 6 mo

OTHER ASPECTS OF CCTF DECEMBER MEETING

- Climate Briefing Form
 - Link to draft form in minutes
- Case studies: criteria and examples
- Table (output) under construction by CCTF:
 - Summary of drivers, impacts, potential responses, resiliency targets, gaps/needs
 - Case studies → best fit within this context
- Next meeting

CONSIDERATIONS FOR THE COUNCIL

- Council concurrence on work plan direction
 - Overall steps, activities and direction
 - Proposed process is iterative
- Proposed lifespan of CCTF:
 - Plan for 5 years (FEP originally estimated 5-7)

Appendices

Appendix 1

Working draft of Adaptation in the Bering Sea coupled social- ecological system

Overview:

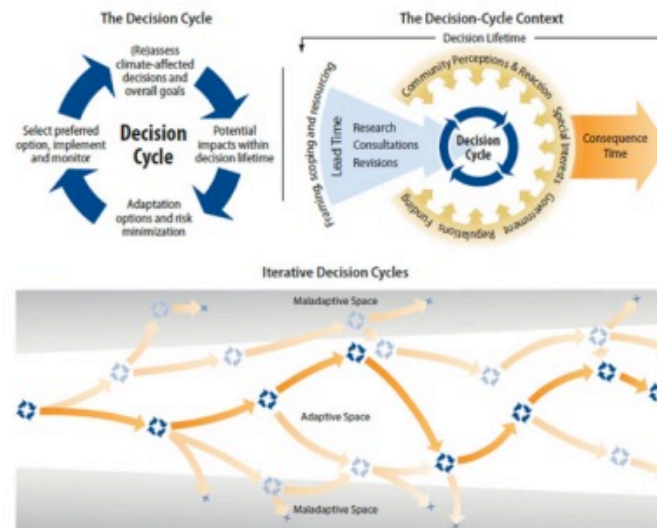

The CCTF aims for an inclusive process in developing recommendations and when assessing risks, impacts, and tradeoffs. The latter relies on understanding and considering biological trajectories of change as well as the social, cultural, and economic implications and scope of adaptation in the intricately coupled social-ecological Bering Sea system. Therefore the CCTF will develop and update (as needed) definitions of “adaptation” and “resilience” in terms of climate change and Bering sea fisheries ,as well as attendant metrics and indicators of progress (or limitations) towards implementation and performance. The IPCC definitions for “adaptation” and “resilience” and the CCTF preliminary definitions of each are provided below and included here as starting points for discussion. The focus on these definitions is intended to provide clarity for the success of the work plan. They will be updated with input from and collaborative engagement with stakeholders, and the CCTF will maintain evolving documents describing Adaptation and Resilience in the Appendices to the work plan that provide more detailed definition and descriptions.

Adaptation definition (draft):

The IPCC defines adaptation as “the process of adjustment to actual or expected climate change and its effects” (IPCC 2014, p. 5). In the context of Bering Sea fisheries, adaptation to support climate resilient social-ecological systems includes ecosystem-based management policies that embrace uncertainty, adjust at a rate that is consistent with observed changes (e.g., allows communities and fisheries to adapt in a proactive rather than a solely reactive manner), are inclusive of diverse knowledge sources, and

Appendix 2

Resilience of the Bering Sea coupled social-ecological system

Overview

As the CCTF seeks to provide information recommendations to help the Council advance adaptive management that helps ensure resilient ecosystems, fisheries, and communities, it seems wise to have working definitions of those terms. The IPCC definitions for "adaptation" and "resilience" and the CCTF preliminary definitions of each are provided in the CCTF workplan and included as starting points for discussion. The CCTF intends to work collaboratively with stakeholders to periodically update and revise

EXTRA SLIDES FOR DISCUSSION

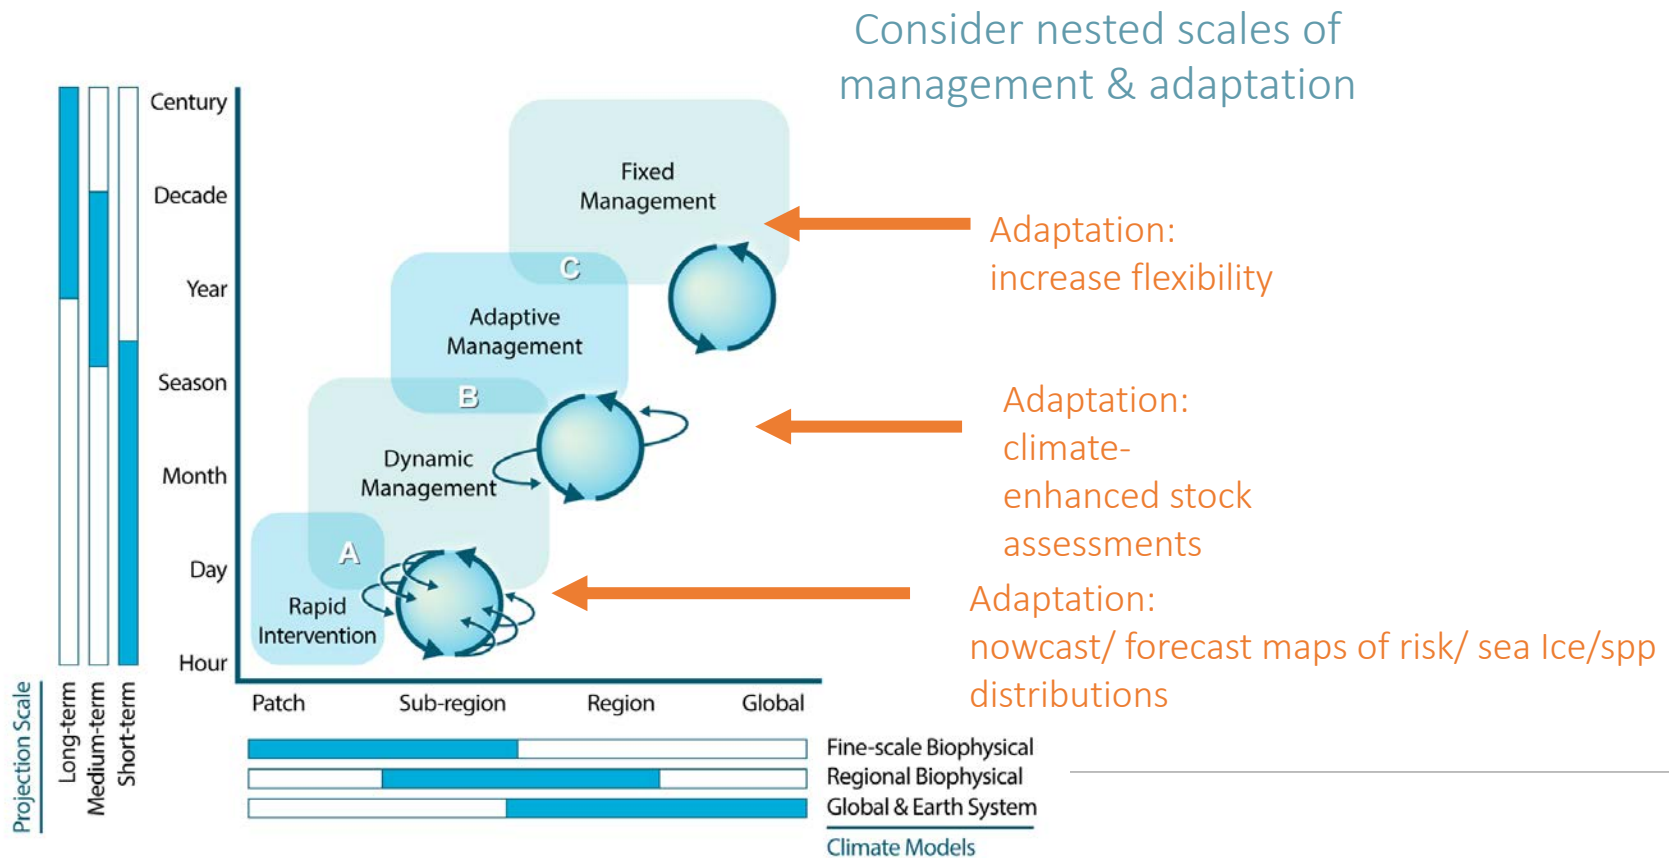

Integrating the module into existing Council process

- “complement existing delivery of EBM advice to the Council process by organizing and synthesizing the breadth of climate information”
 - “systematic review of new and emergent climate change information, both immediate and long-term in scope”
 - “synthesis and evaluation of key issues, emergent trends, and potential red flags relevant to the Council”
 - “communication and iterative review with the LK/TK/Subsistence Task Force and FEP Team to support the diversity of perspectives and knowledge sources needed for evaluations of risk”
 - “identification of climate-resilient management actions to enable adaptation to climate-driven change (this particular point would be in the form of recommendations that can be considered by the Council through the Council process)”
-
- “As much as possible we will work with existing teams and products (such as the Ecosystem Status Report teams) to minimize the amount of reporting and review and avoid duplication of existing efforts.”
