Introduction

Figures and tables in this section present comparisons between alternative model scenarios for estimated rates (e.g., natural mortality) or other attributes (e.g., molt increments) describing inferred Tanner crab population processes.

Natural mortality

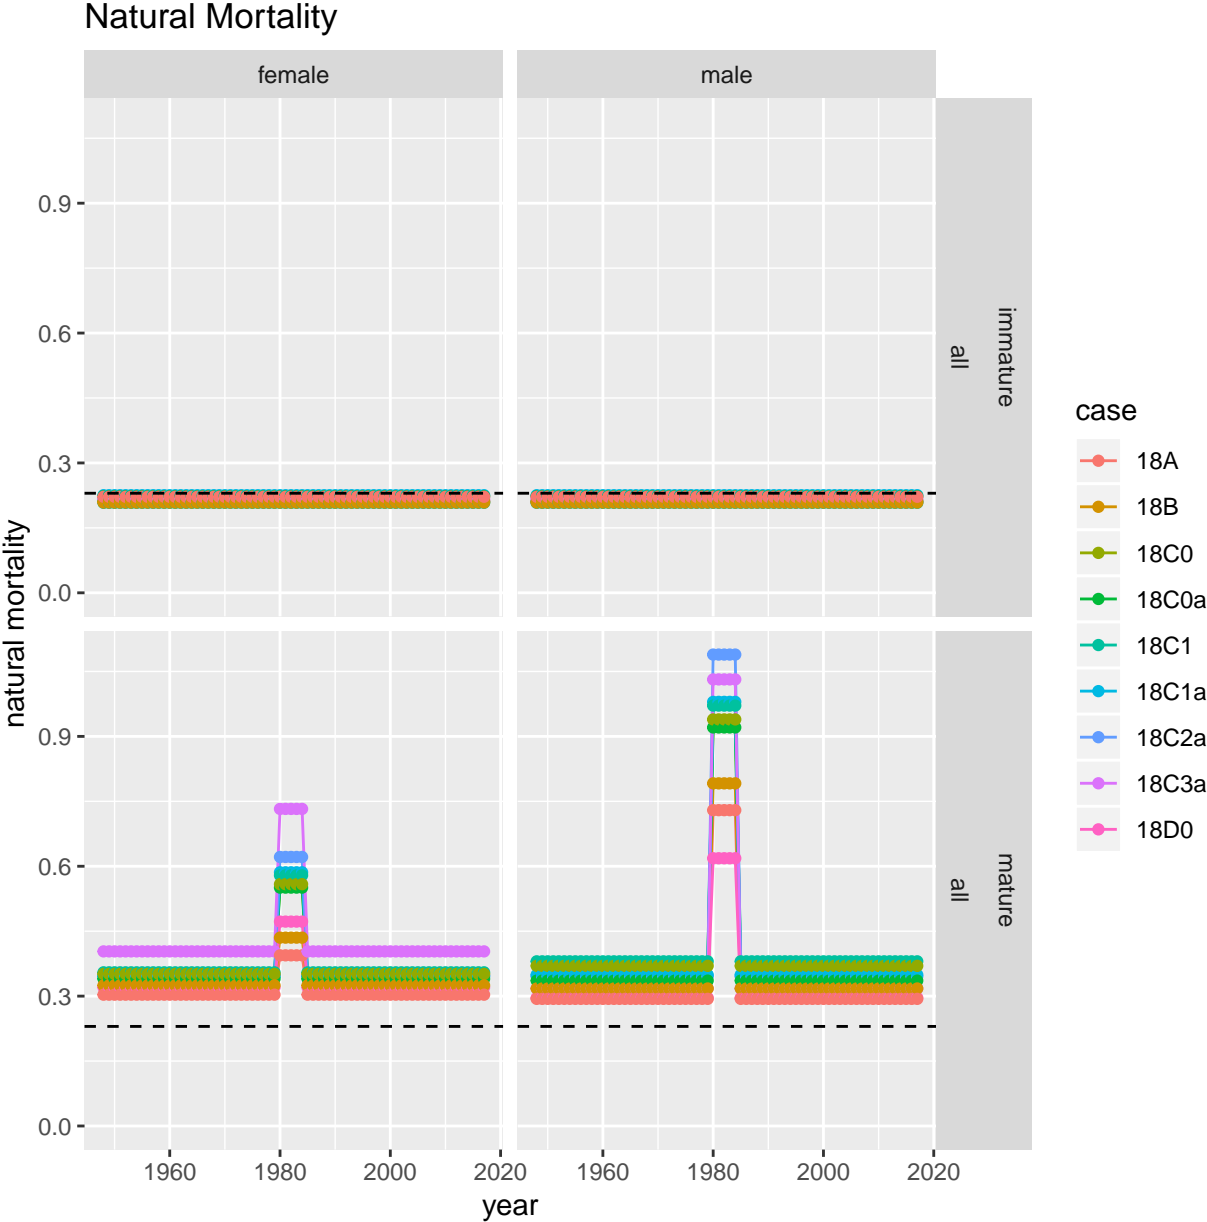

Figure 1: Estimated natural mortality rates, by year.

Probability of terminal molt

Figure 2: Probability of terminal molt.

Mean growth

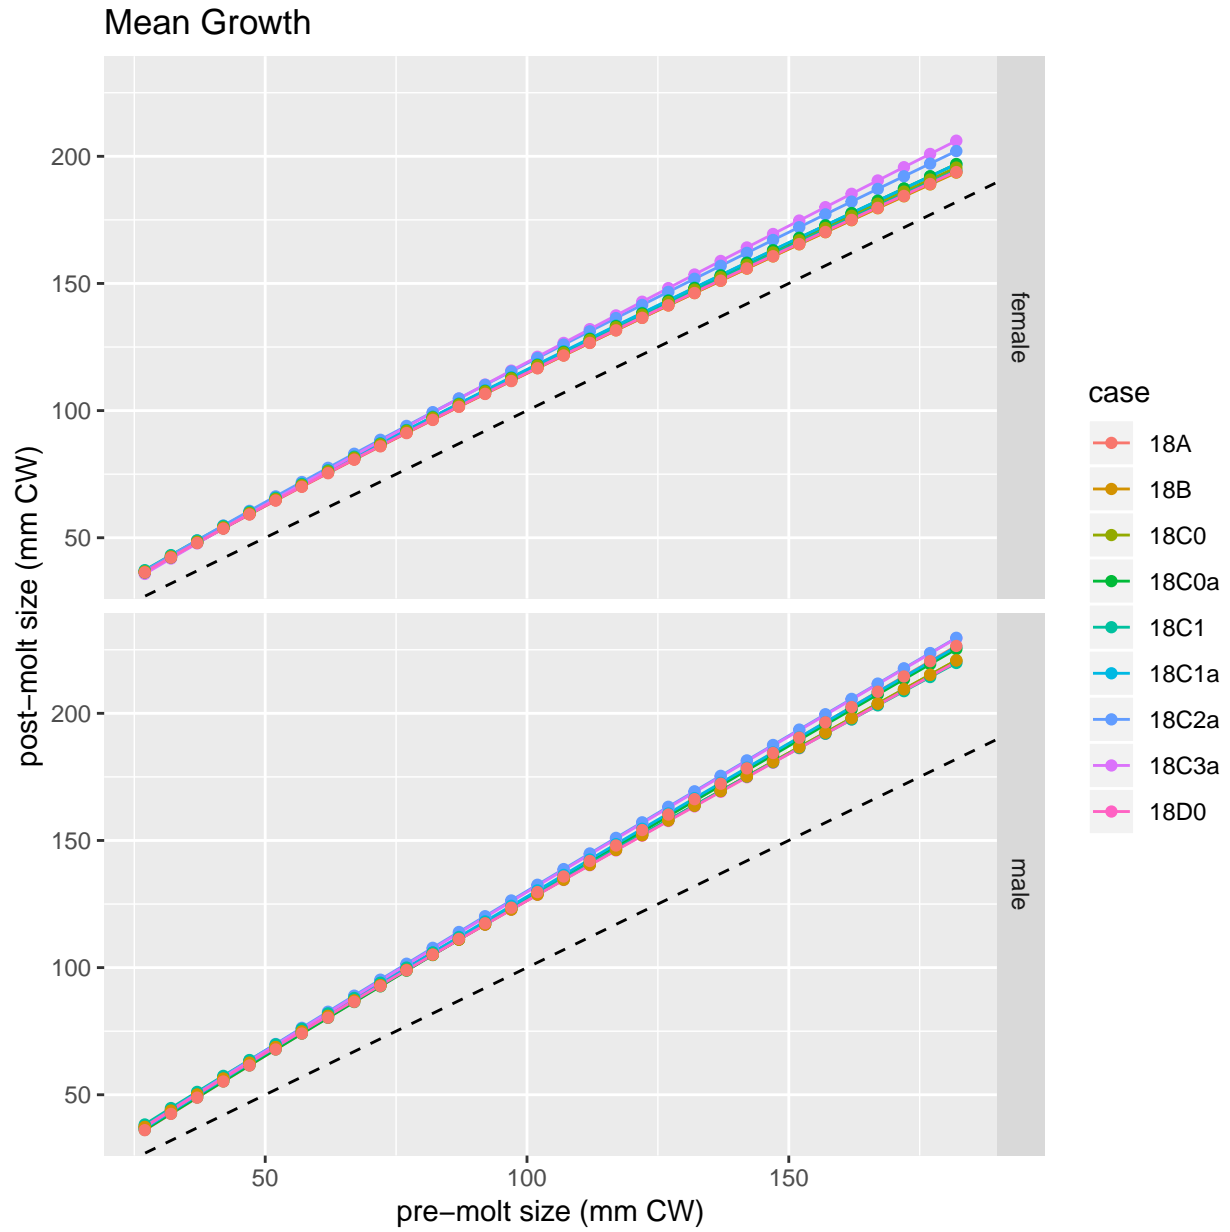

Figure 3: Mean growth.

The same growth matrices are compared in the following figure(s) as line plots for each pre-molt size bin, by sex.

male growth: 1948–2017
