

## Appendix C8

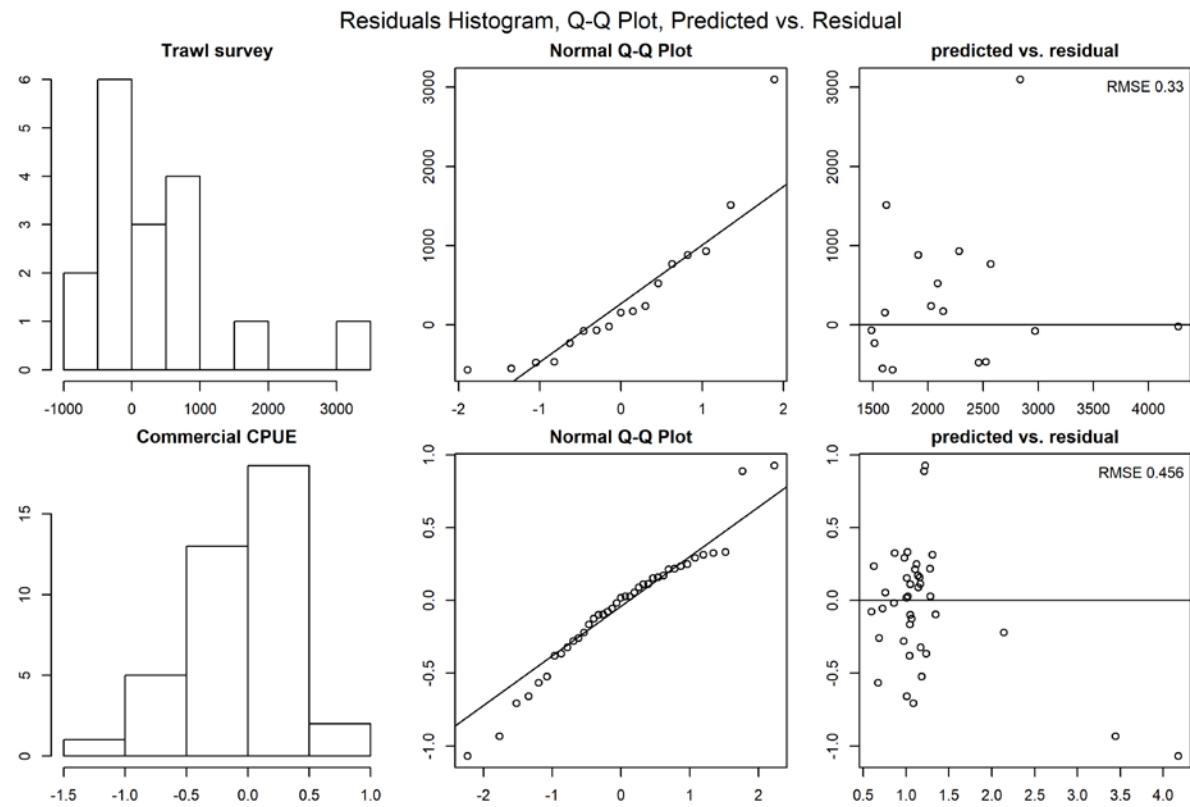

Figure C8-1. QQ Plot of Trawl survey and Commercial CPUE.

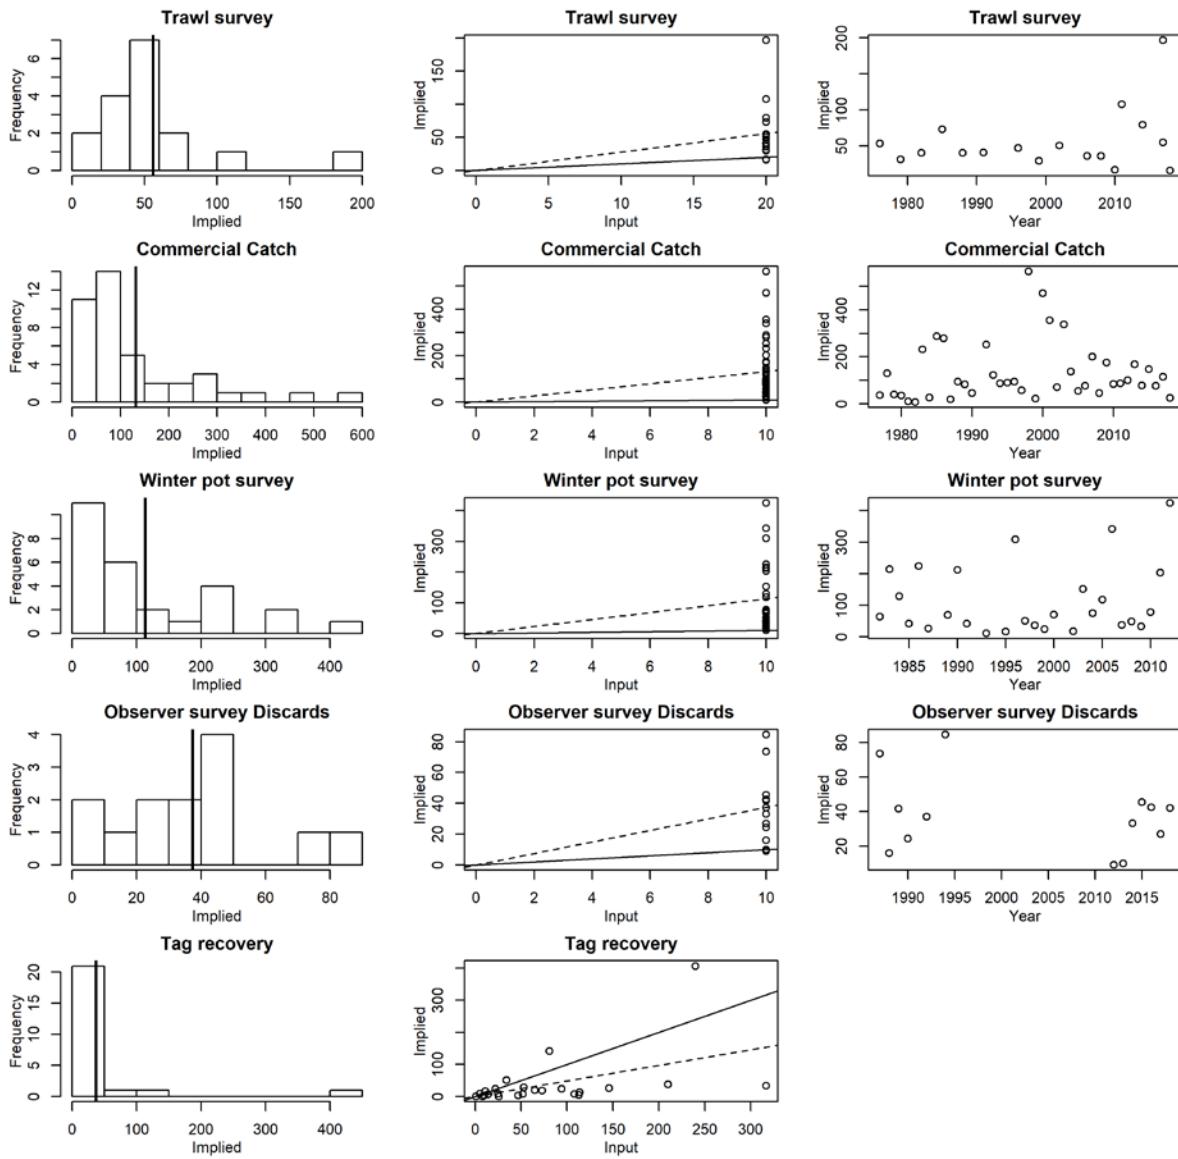

Figure C8-2: Implied effective samples. Figures in the first column show implied effective sample size (x-axis) vs. frequency (y-axis).

Vertical solid line is the mean implied effective sample size.

The second column show input sample size (x-axis) vs. implied effective sample size (y-axis). Dashed line indicates linear regression slope, and solid line is 1:1 line. The third column show year (x-axis) vs. implied effective sample size (y-axis).

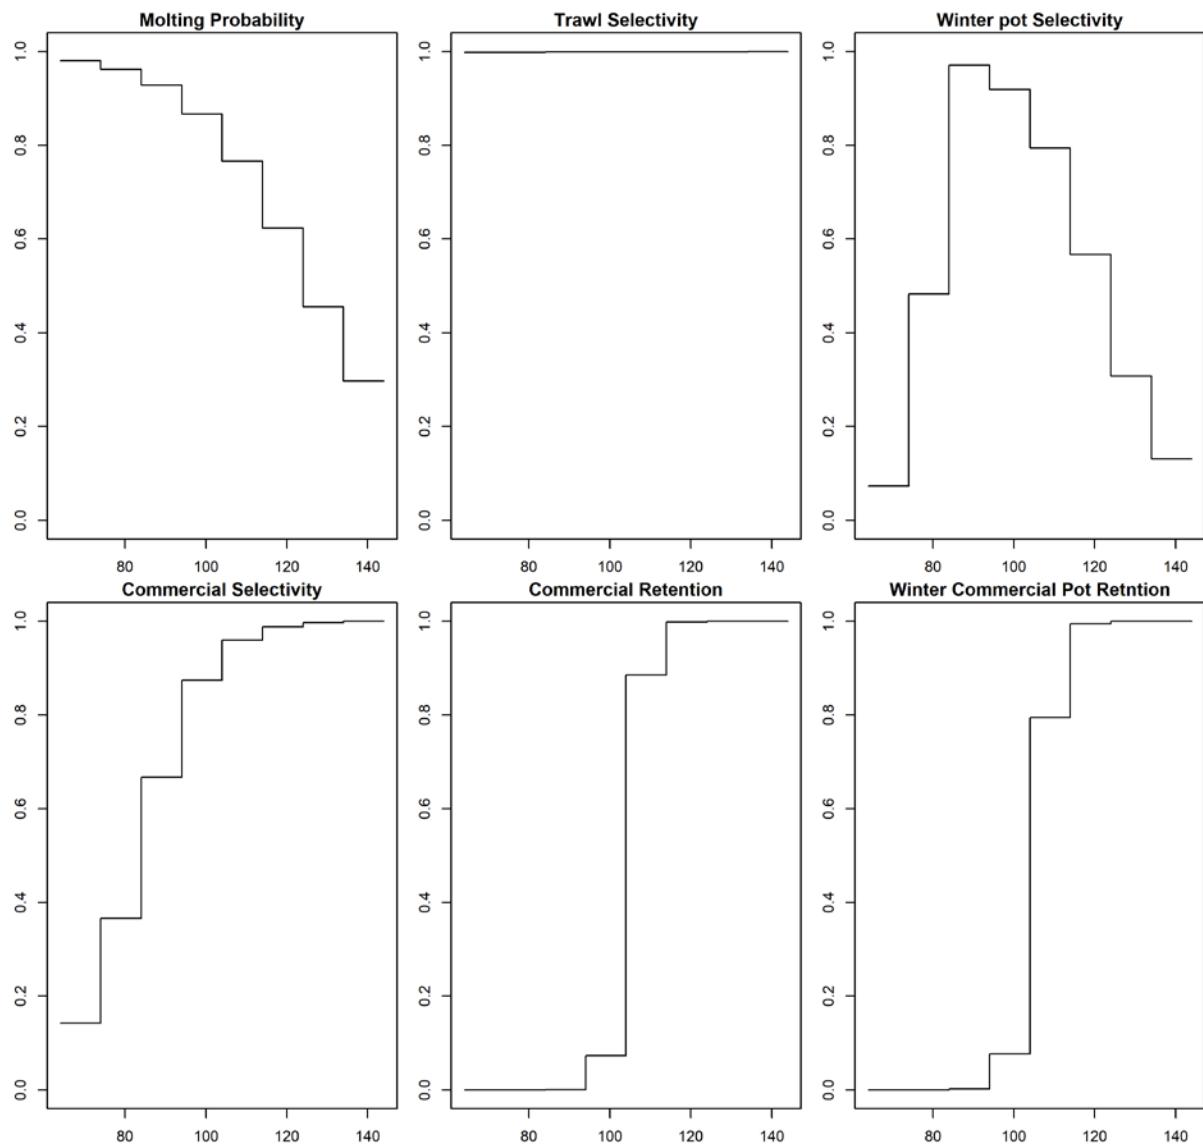

Figure C8-3. Molting probability and trawl/pot selectivity. X-axis is carapace length.

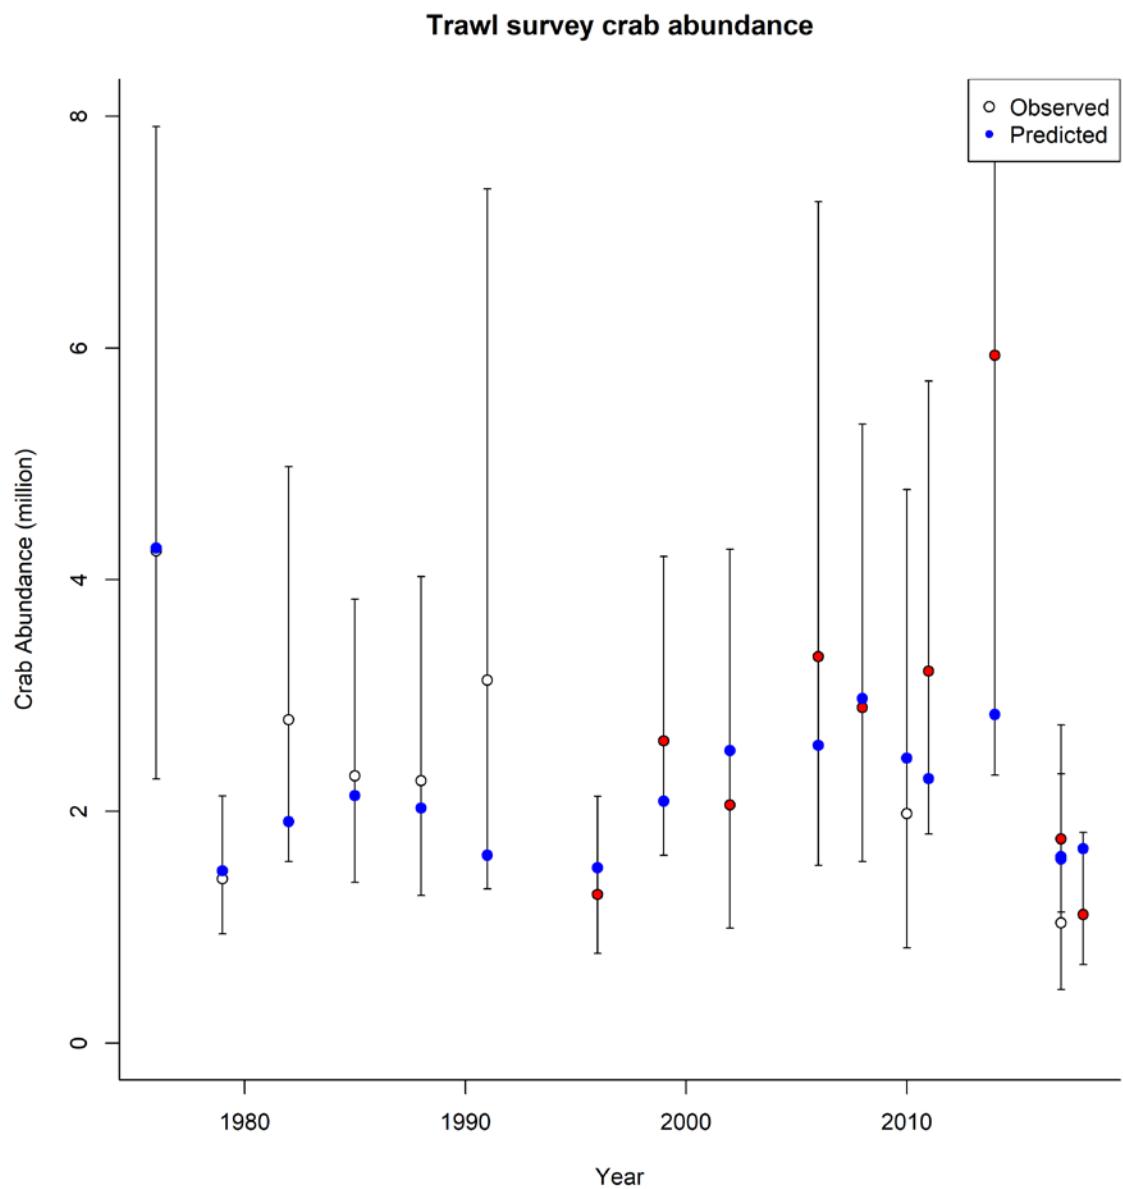

Figure C8-4. Estimated trawl survey male abundance (crab  $\geq 64$  mm CL). Observed: White: NOAA Trawl Survey, Red: ADG&G Trawl Survey

### Modeled crab abundance Feb 01

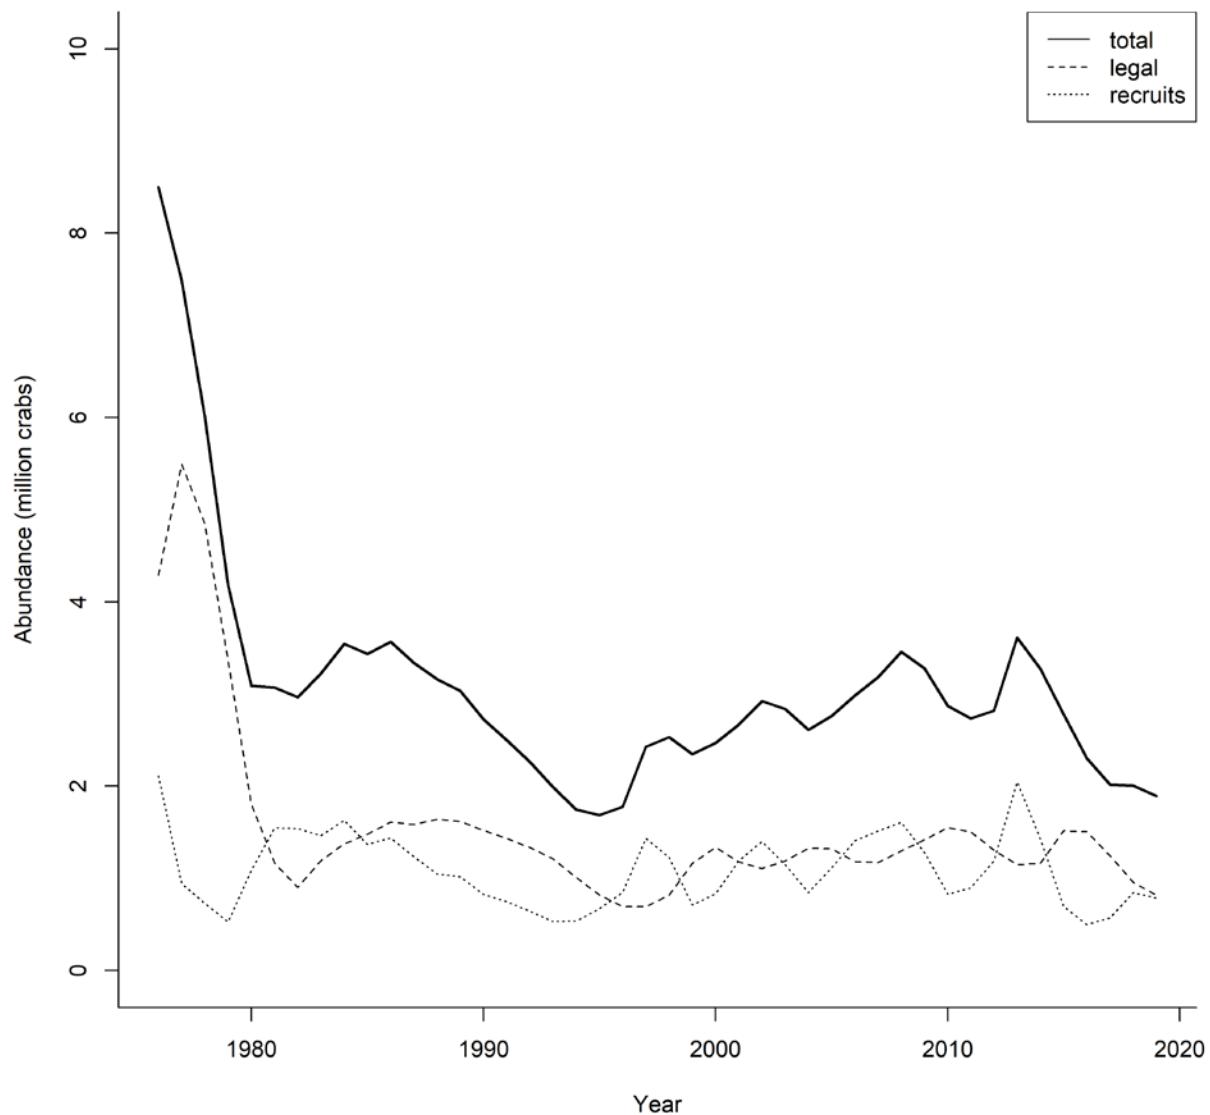

Figure C8-5. Estimated abundance of legal males from 1976-2015.

**MMB Feb 01**

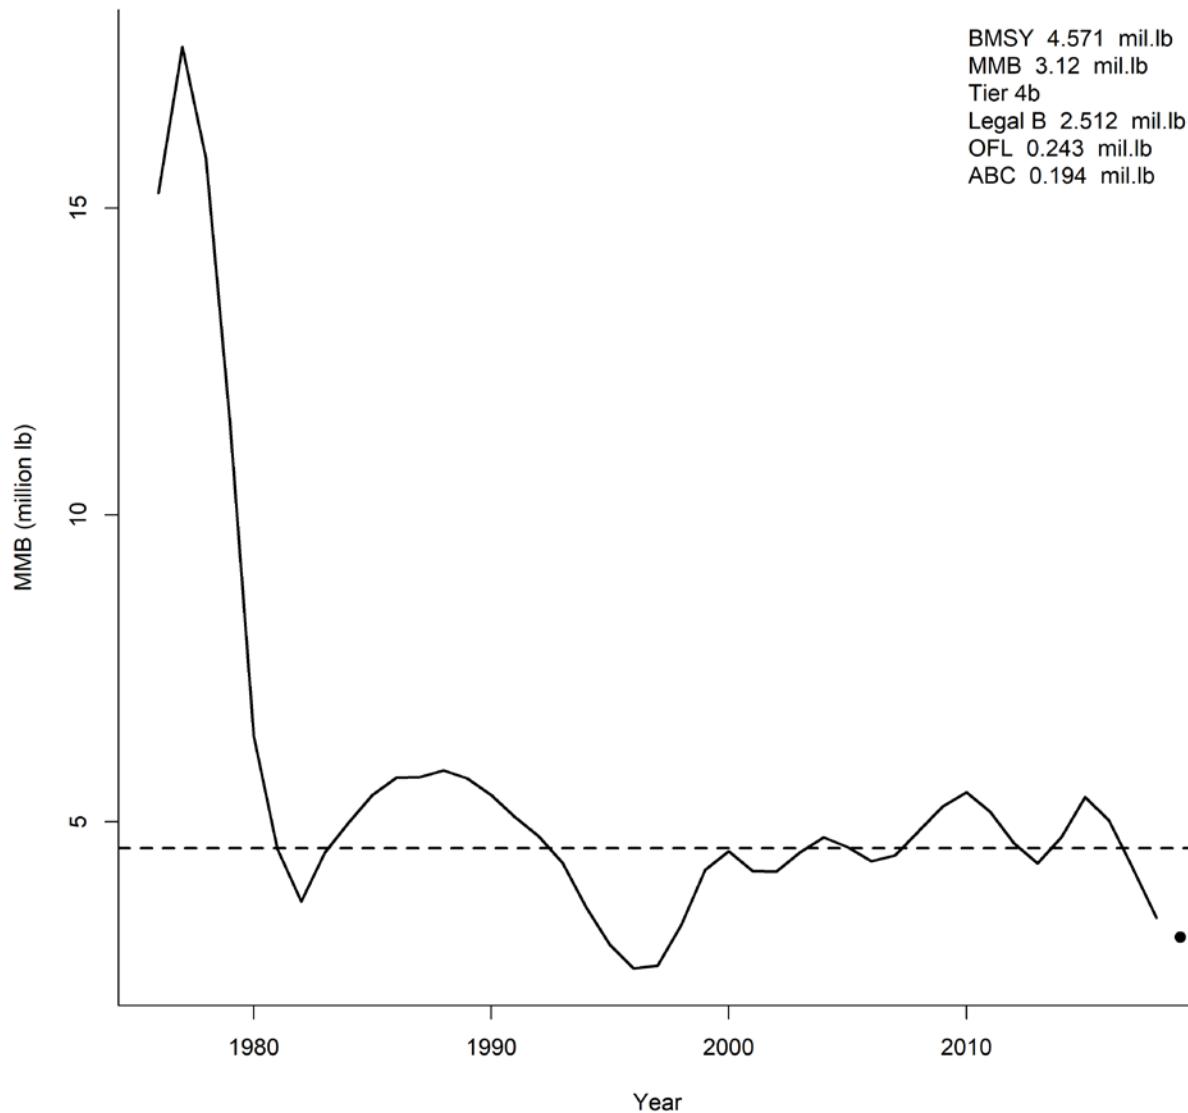

Figure C8-6. Estimated abundance of Mature Male Biomass from 1976-2019. Dash line shows Bmsy (Average MMB of 1980-2019).

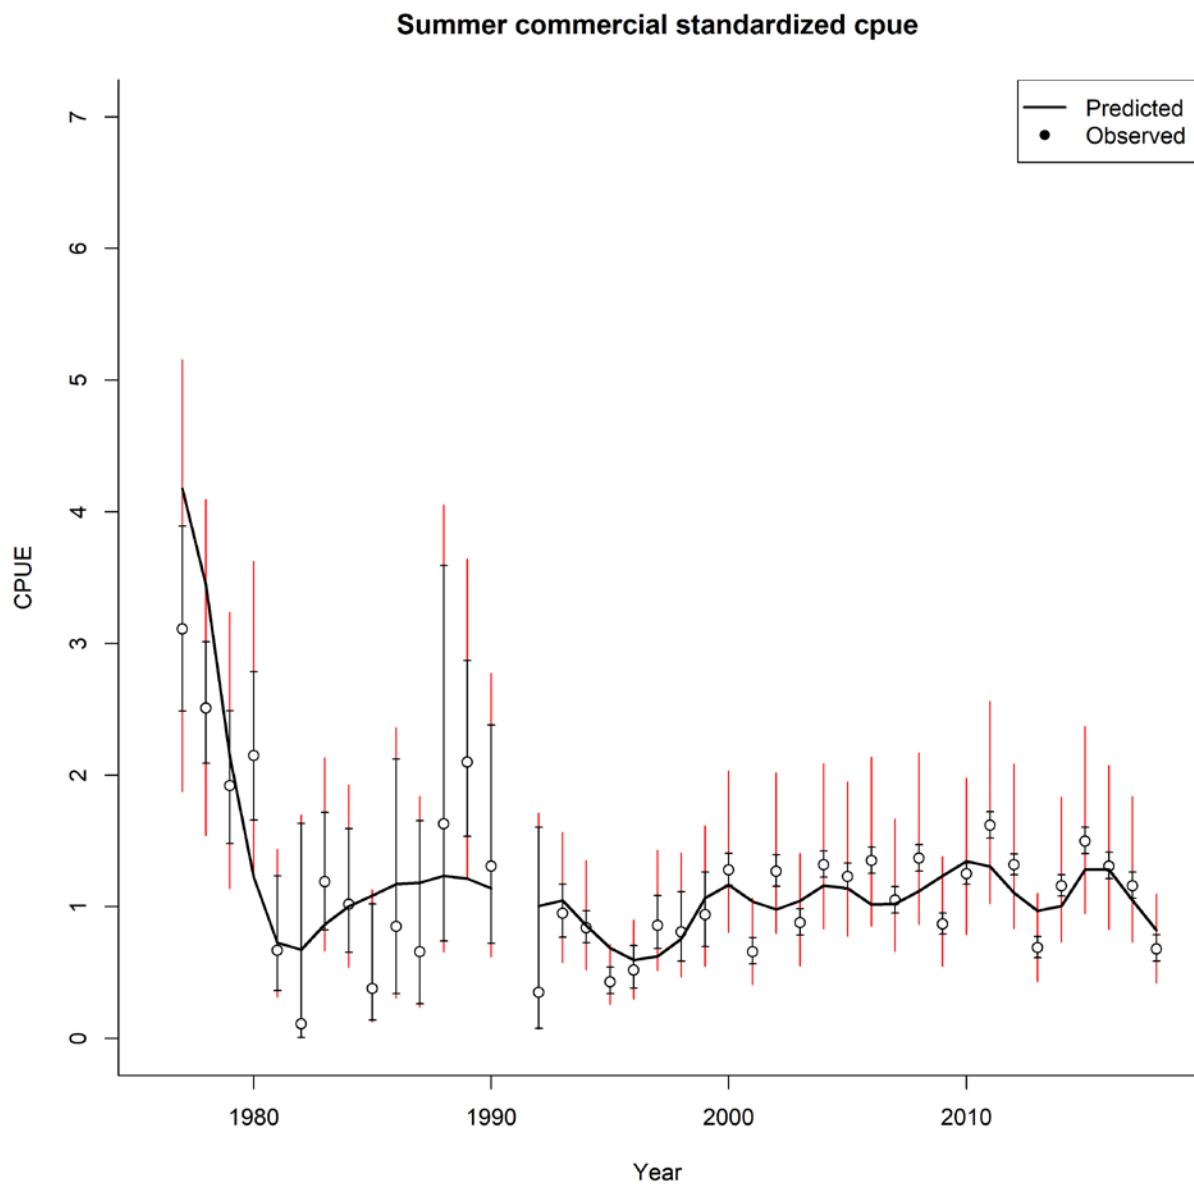

Figure C8-7. Summer commercial standardized cpue 1977-2018.

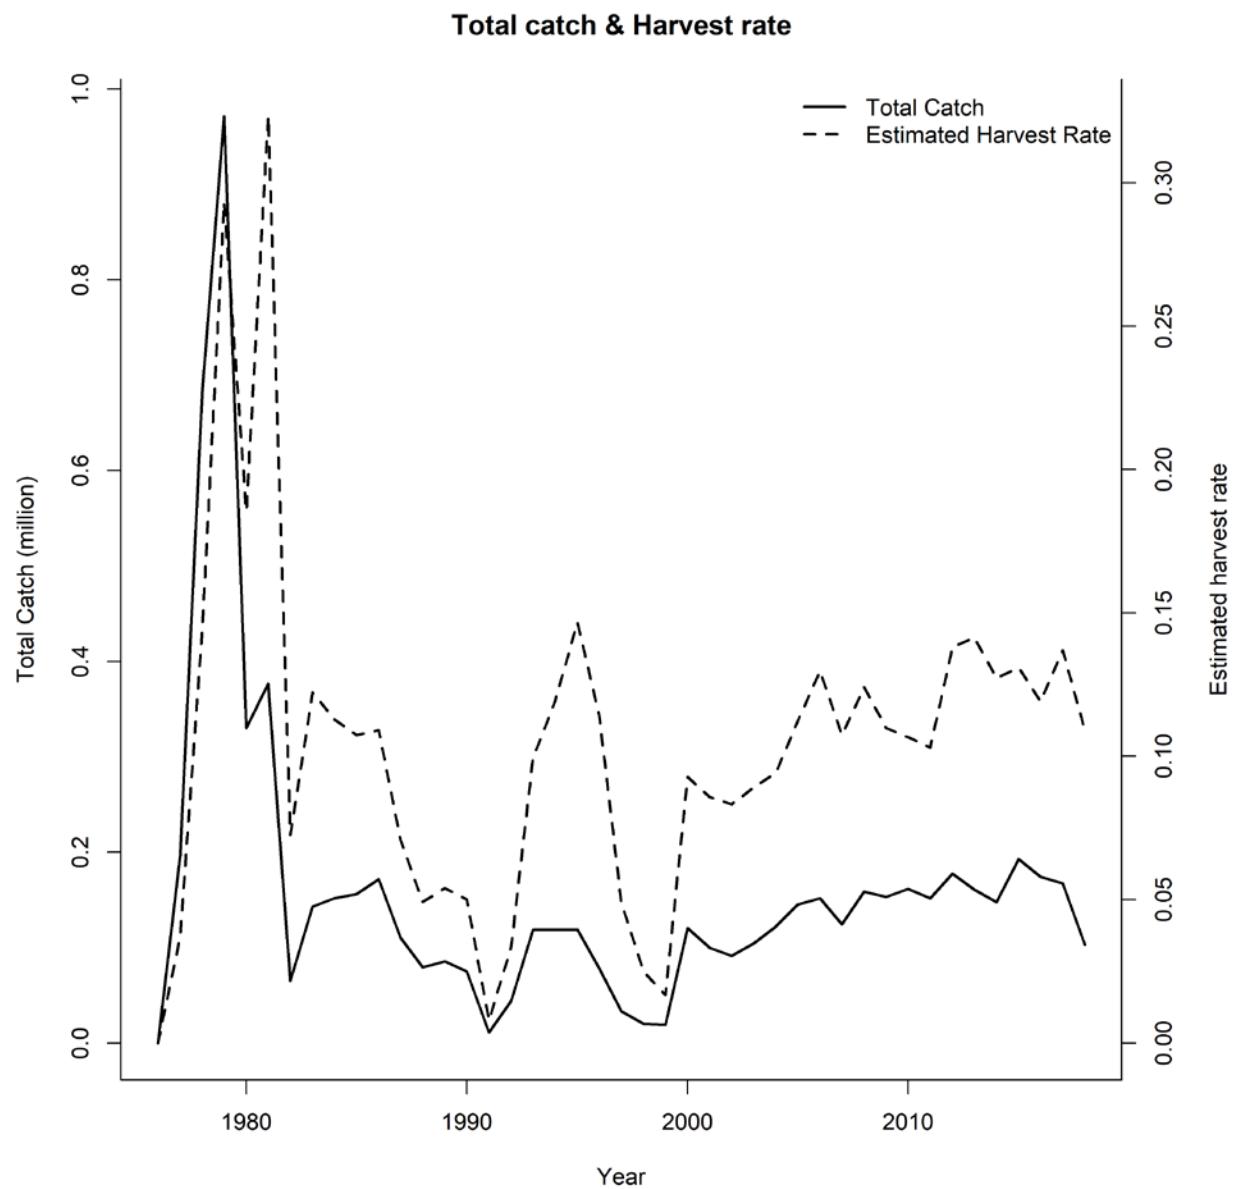

Figure C8-8. Total catch and estimated harvest rate 1976-2018.

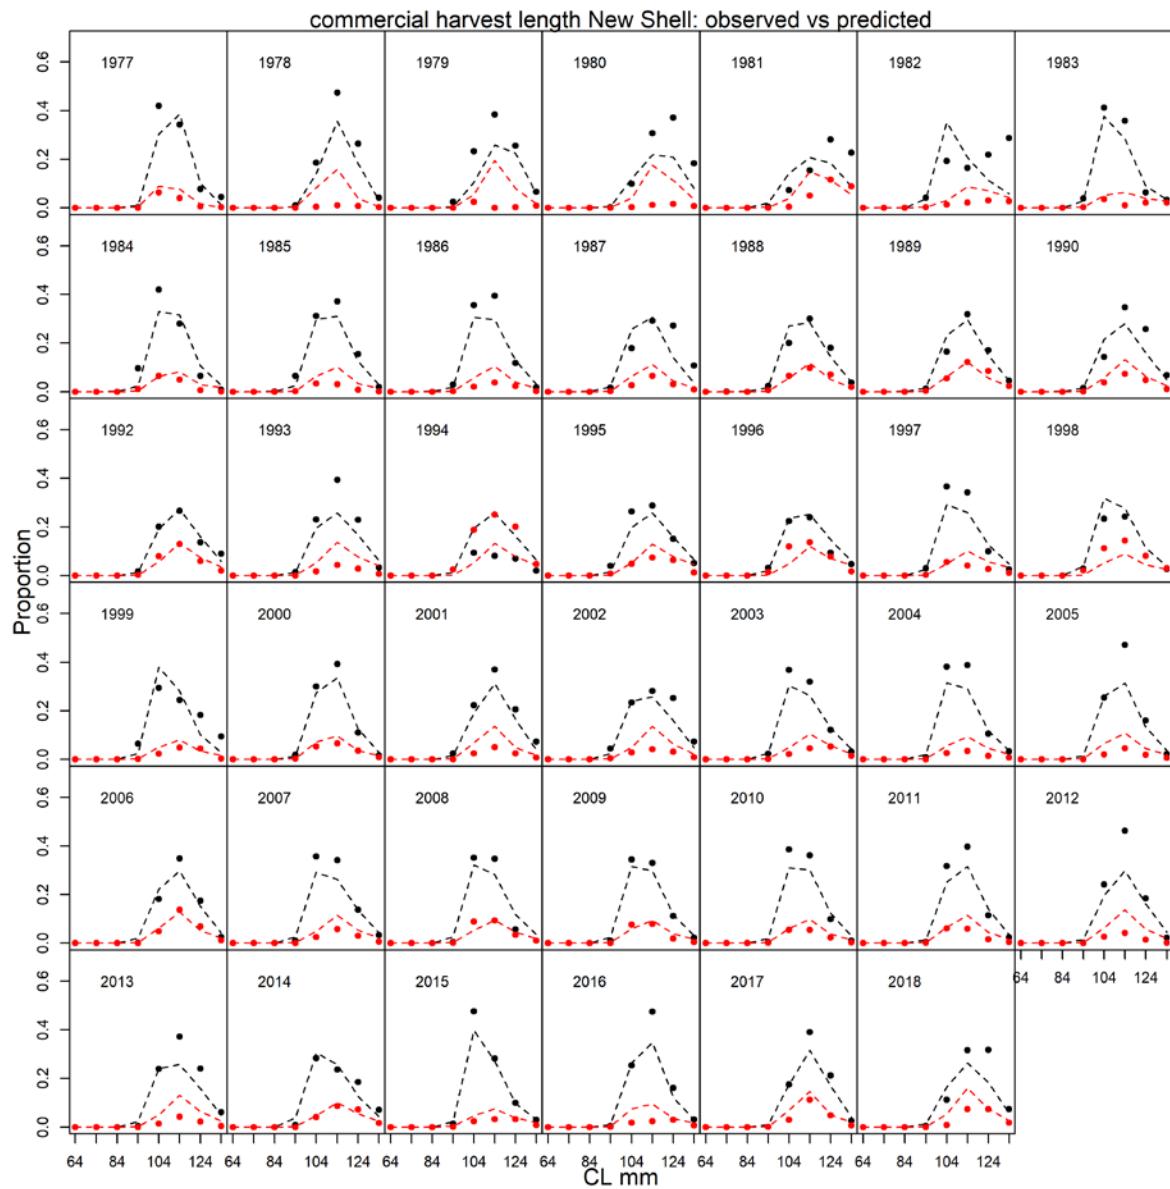

Figure C8-9. Predicted (dashed line) vs. observed (dots) length class proportions for commercial catch. Black: New Shell, Red: Old Shell

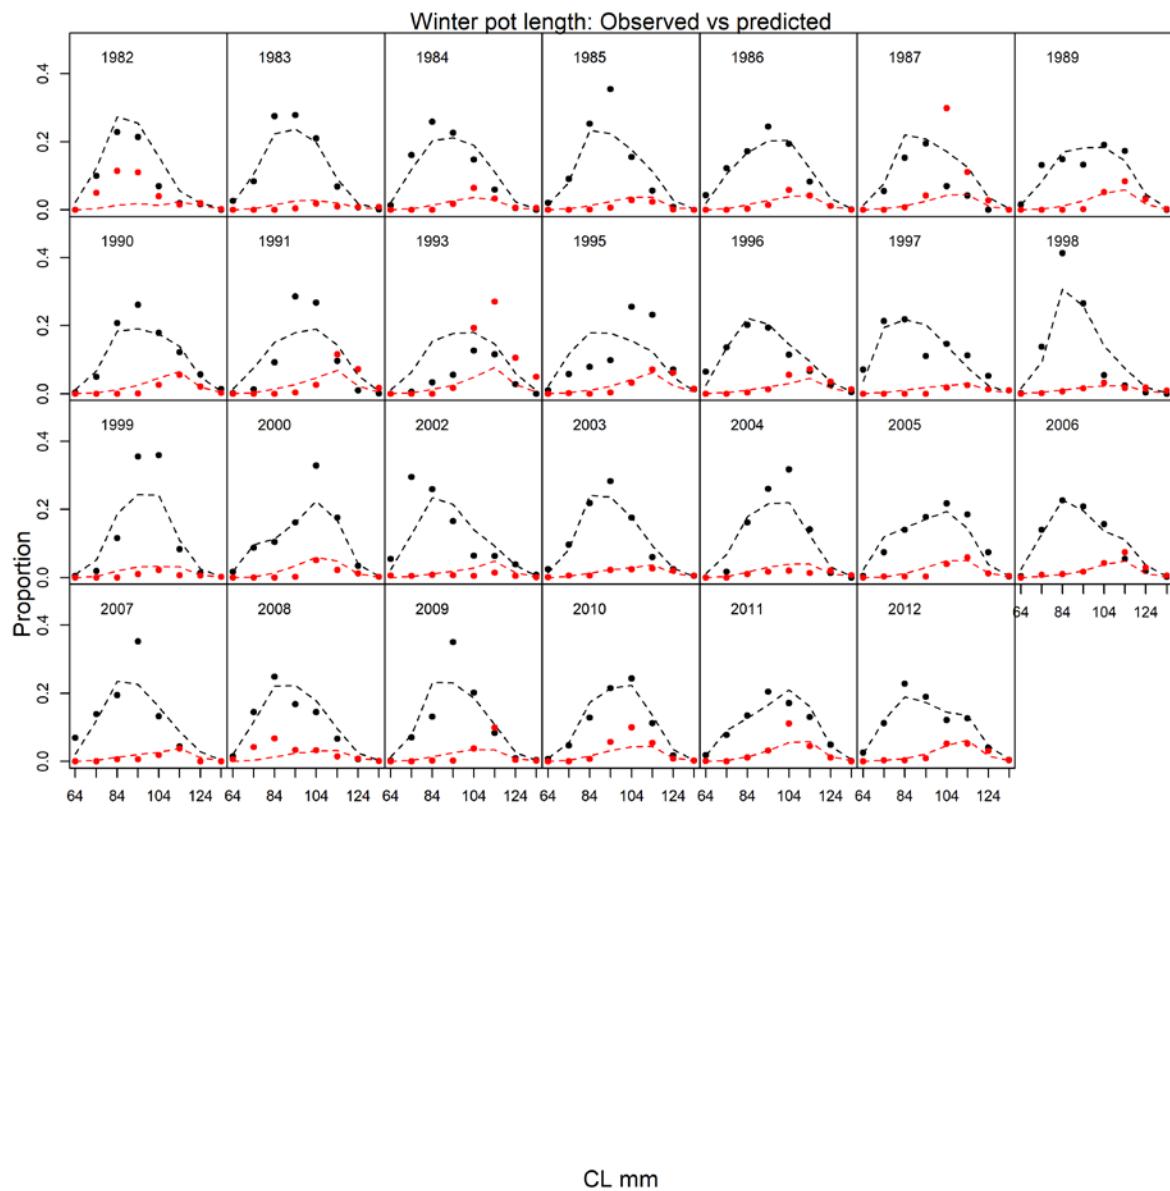

Figure C8-10. Predicted (dashed line) vs. observed (black dots) length class proportions for the winter and spring pot survey.

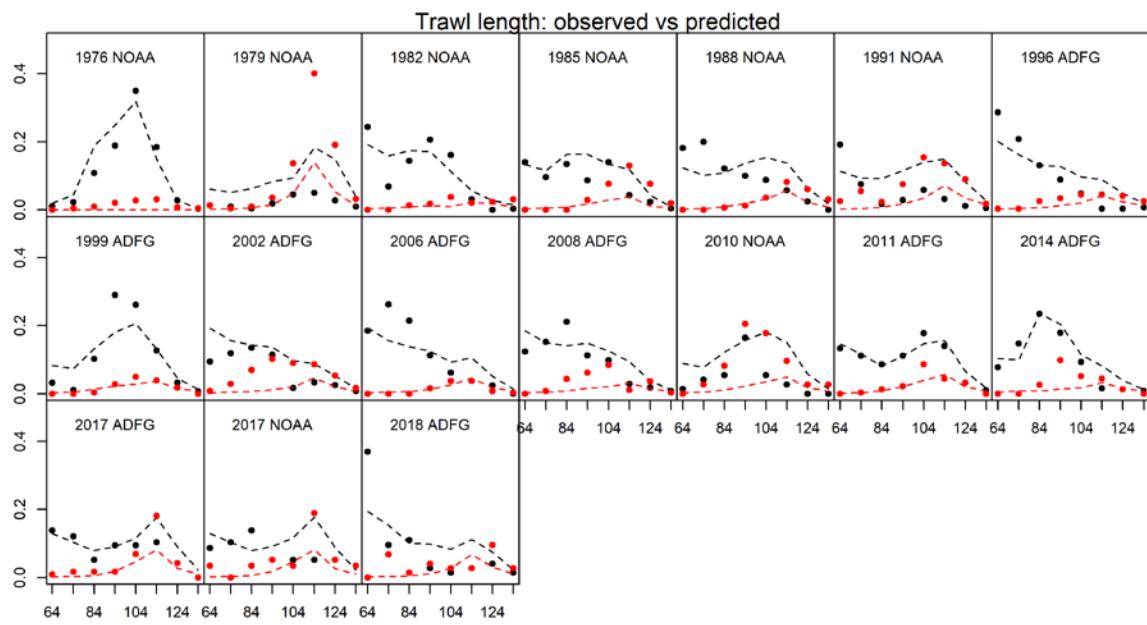

Figure C8-11. Predicted (dashed) vs. observed (dots) length class proportions for trawl survey.

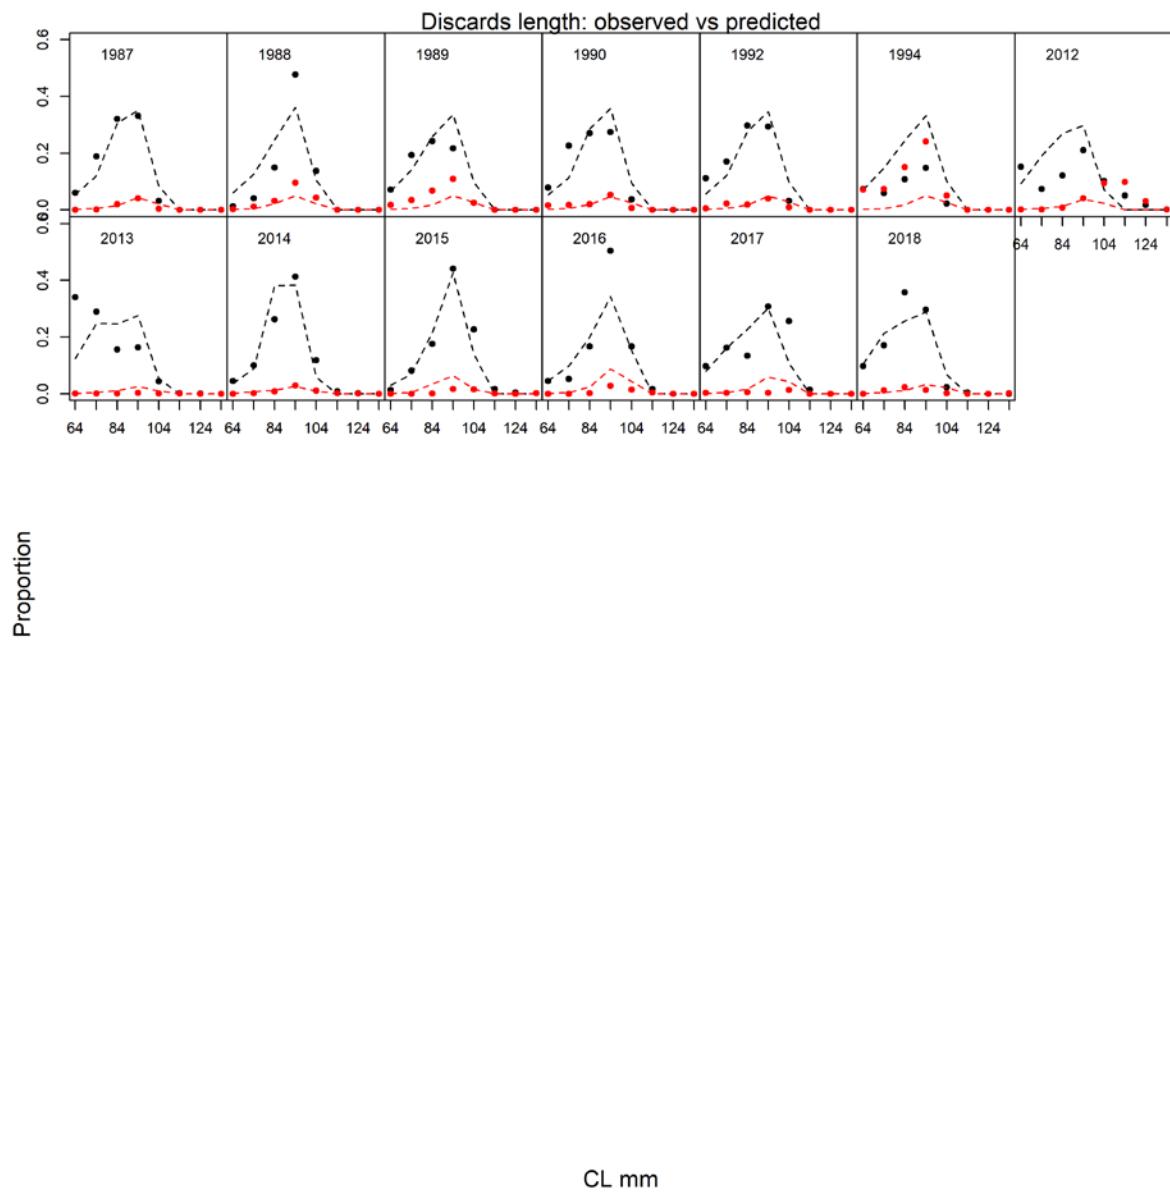

Figure C8-12. Predicted (dashed) vs. observed (dots) length class proportions for the observer survey.

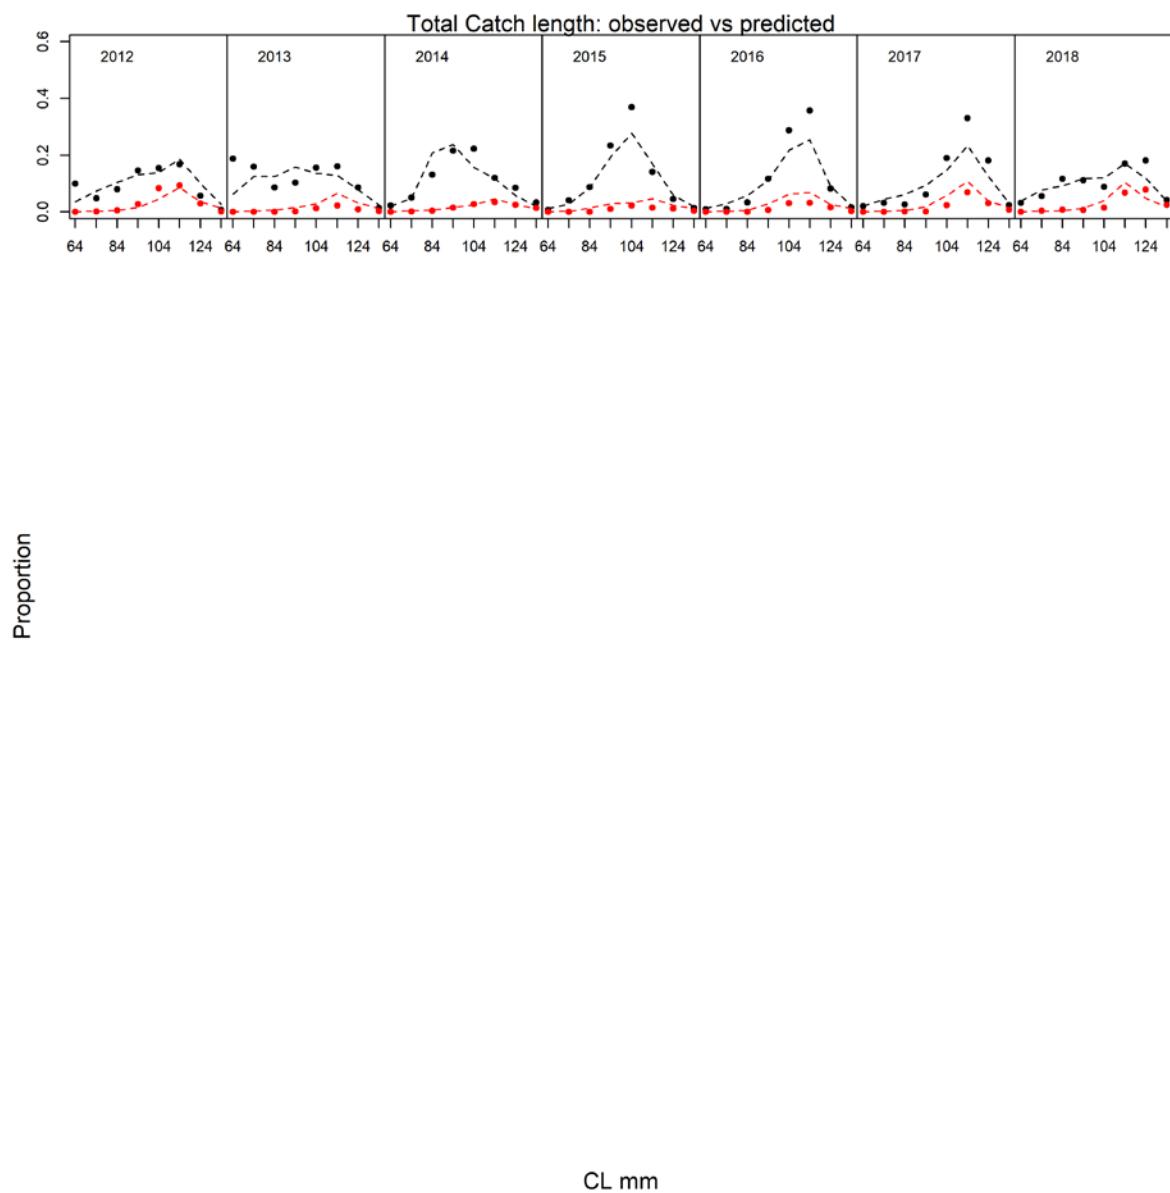

Figure C8-13. Predicted (dashed) vs. observed (dots) length class proportions for the observer survey.

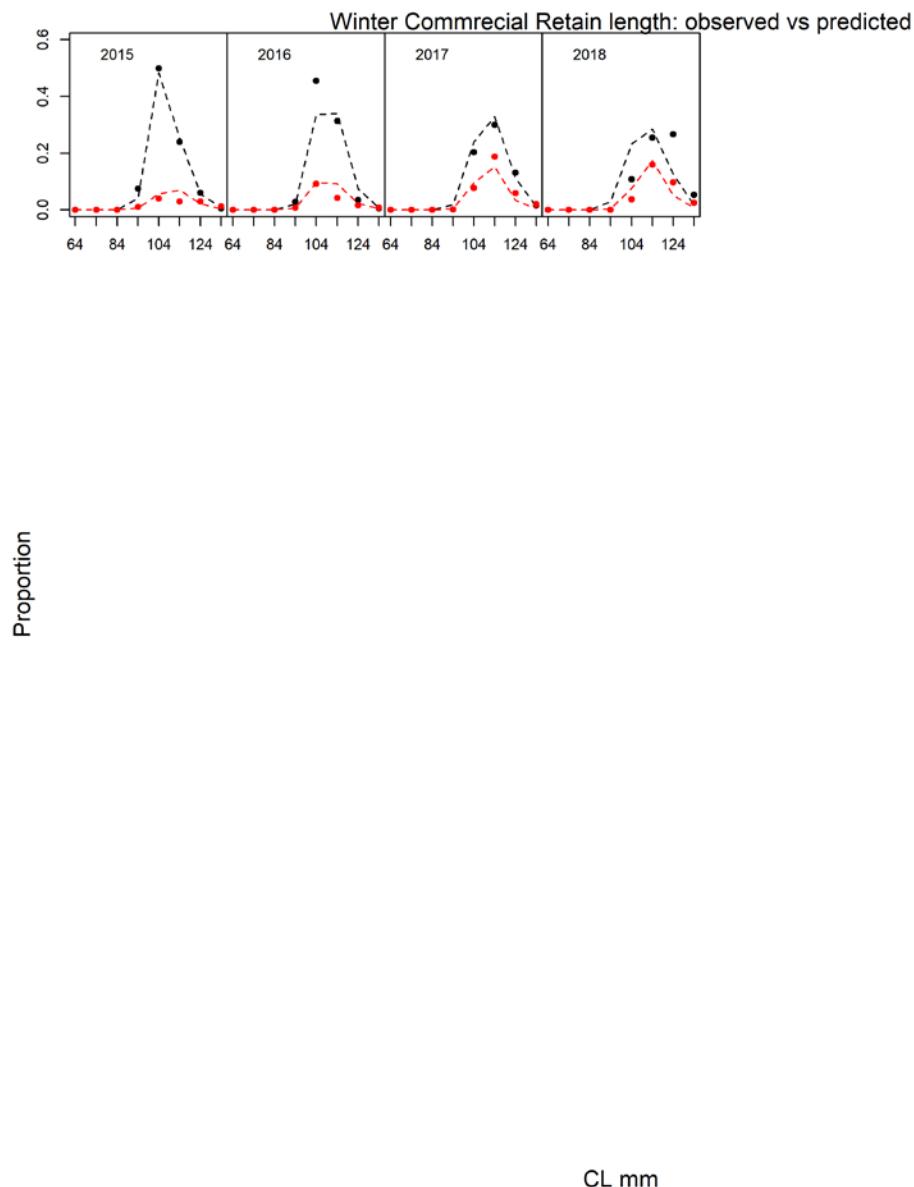

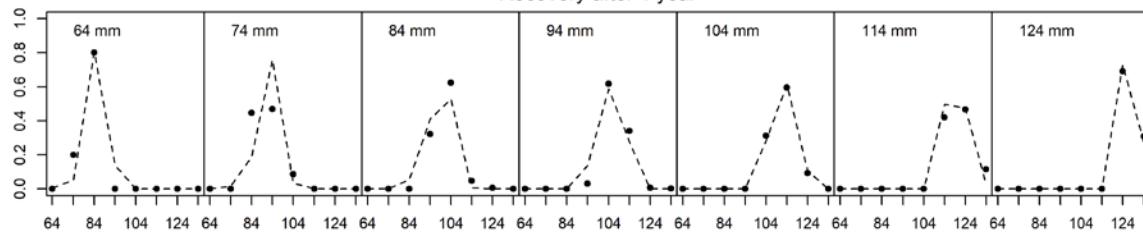

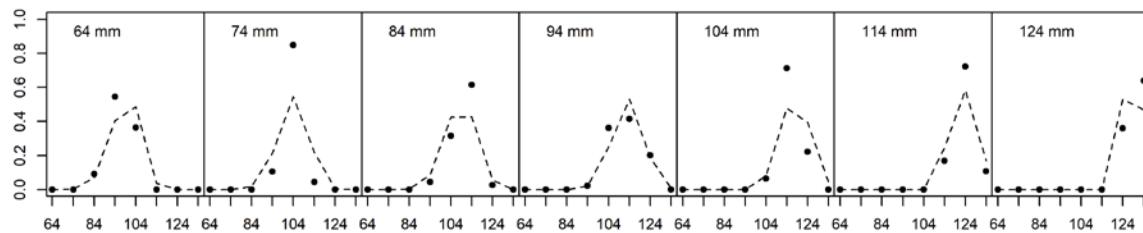

Figure C8-14. Predicted (dashed) vs. observed (dots) length class proportions for the Winter Commercial.

Tag recovery data observed vs predicted  
Recovery after 1 year

Recovery after 2 years

Recovery after 3 years

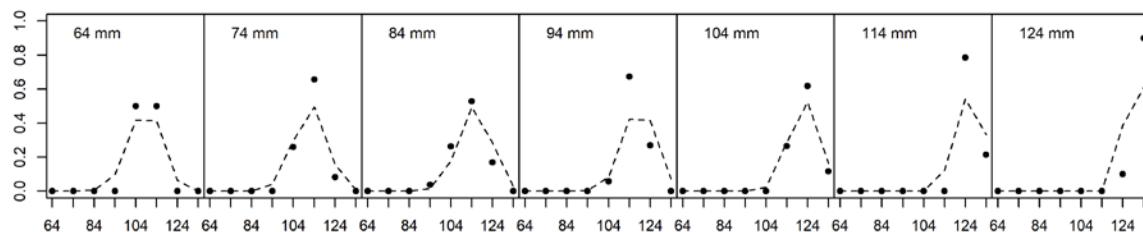

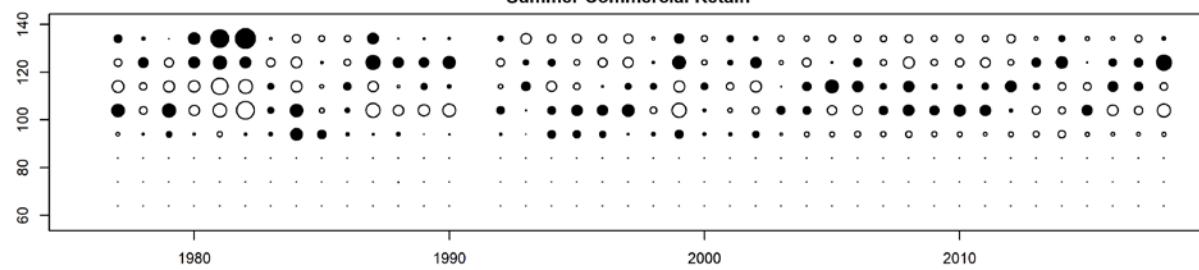

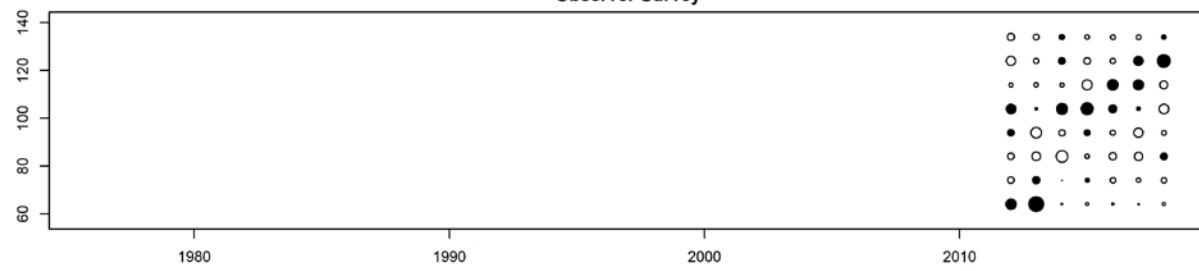

Figure C8-15. Predicted vs. observed length class proportions for tag recovery data.

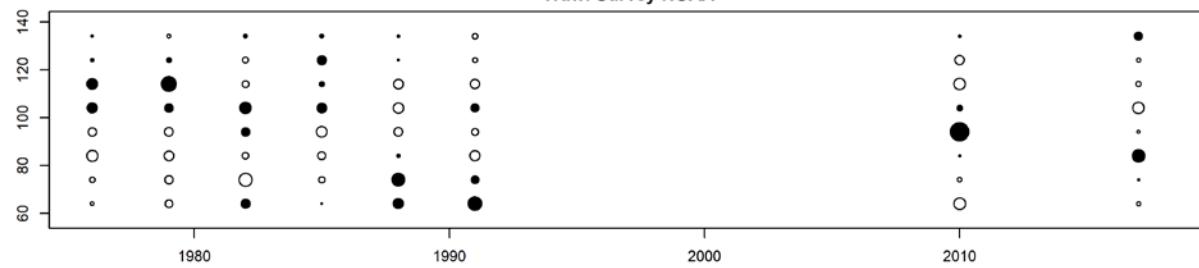

Summer Commercial Retain

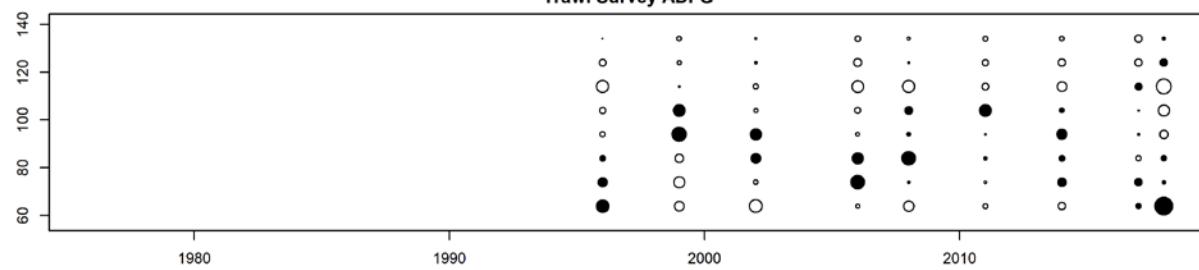

Observer Survey

Trawl Survey NOAA

Trawl Survey ADFG

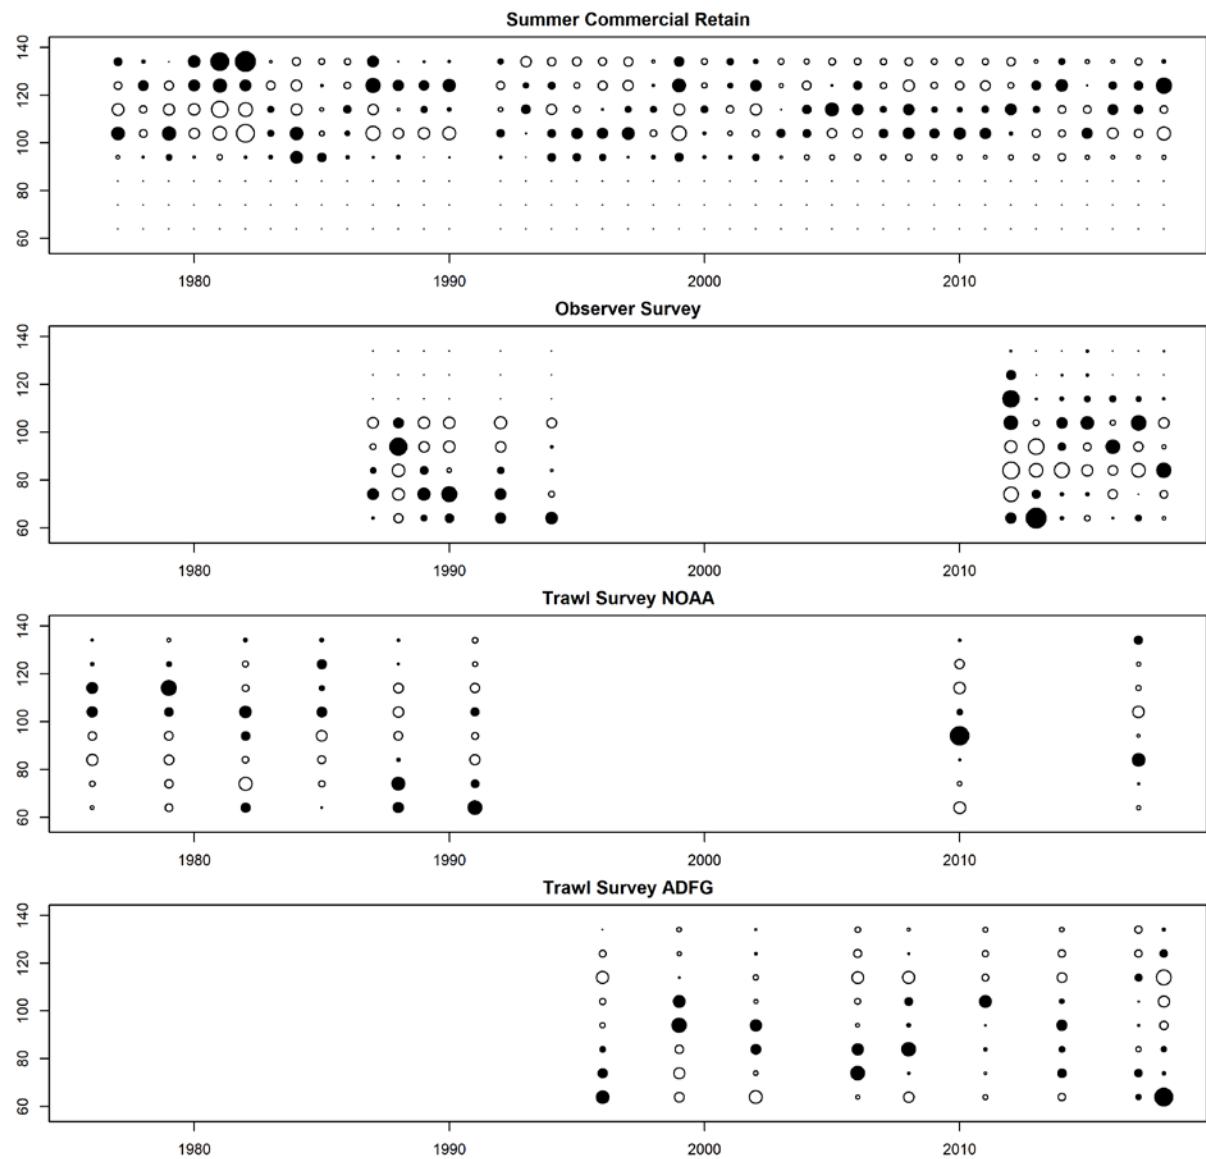

Figure C8-16. Bubble plots of predicted and observed length proportions.  
 Black circle indicates model estimates lower than observed, white circle indicates model estimates higher than observed. Size of circle indicates degree of deviance (larger circle = larger deviance).

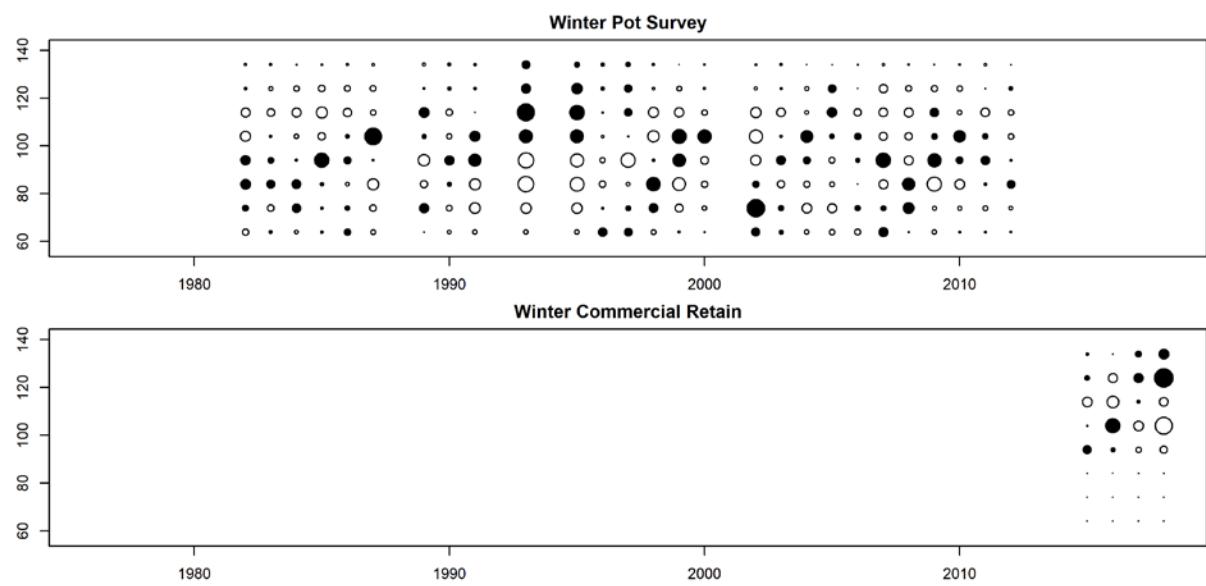

Figure C8-17. Bubble plots of predicted and observed length proportions.  
 Black circle indicates model estimates lower than observed, white circle indicates model estimates higher than observed. Size of circle indicates degree of deviance (larger circle = larger deviance).

Table C8. Summary of parameter estimates for a length-based stock synthesis population model of Norton Sound red king crab.
