

## Appendix for C6: Results Model 5

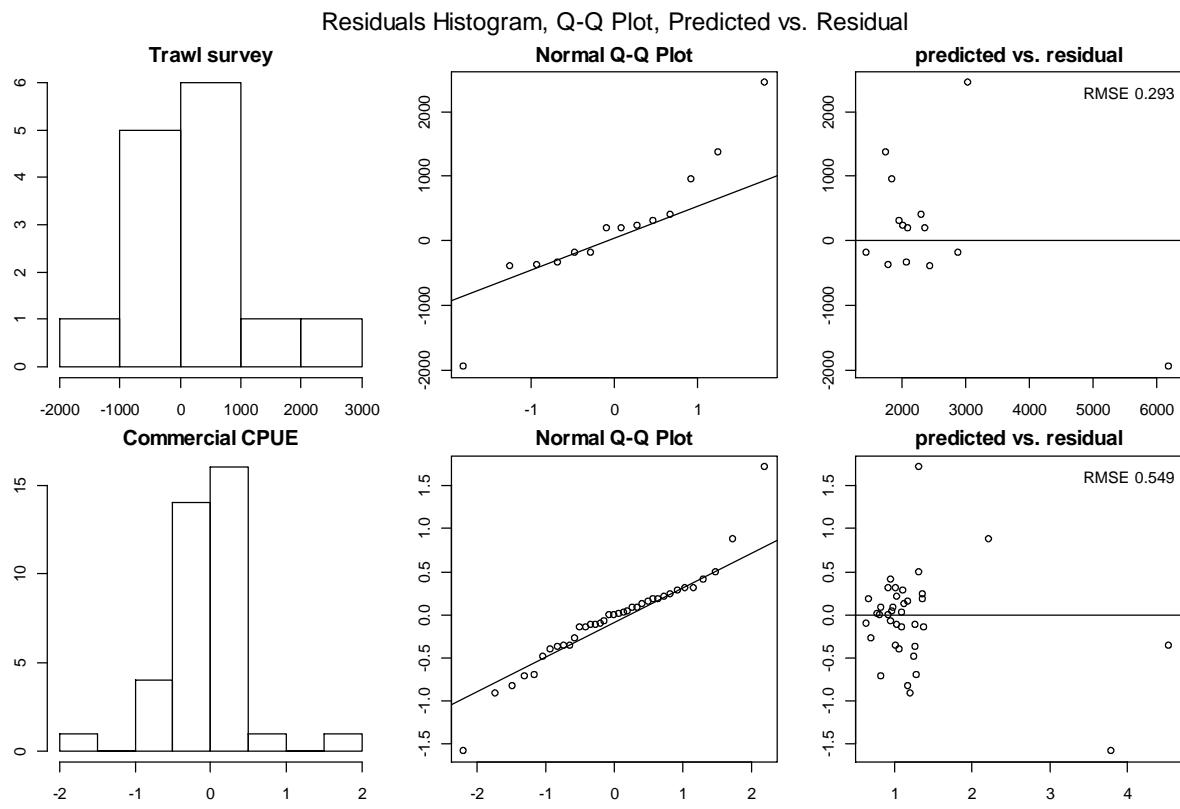

Figure C6-1. QQ plots of trawl survey abundance and commercial CPUE residuals.

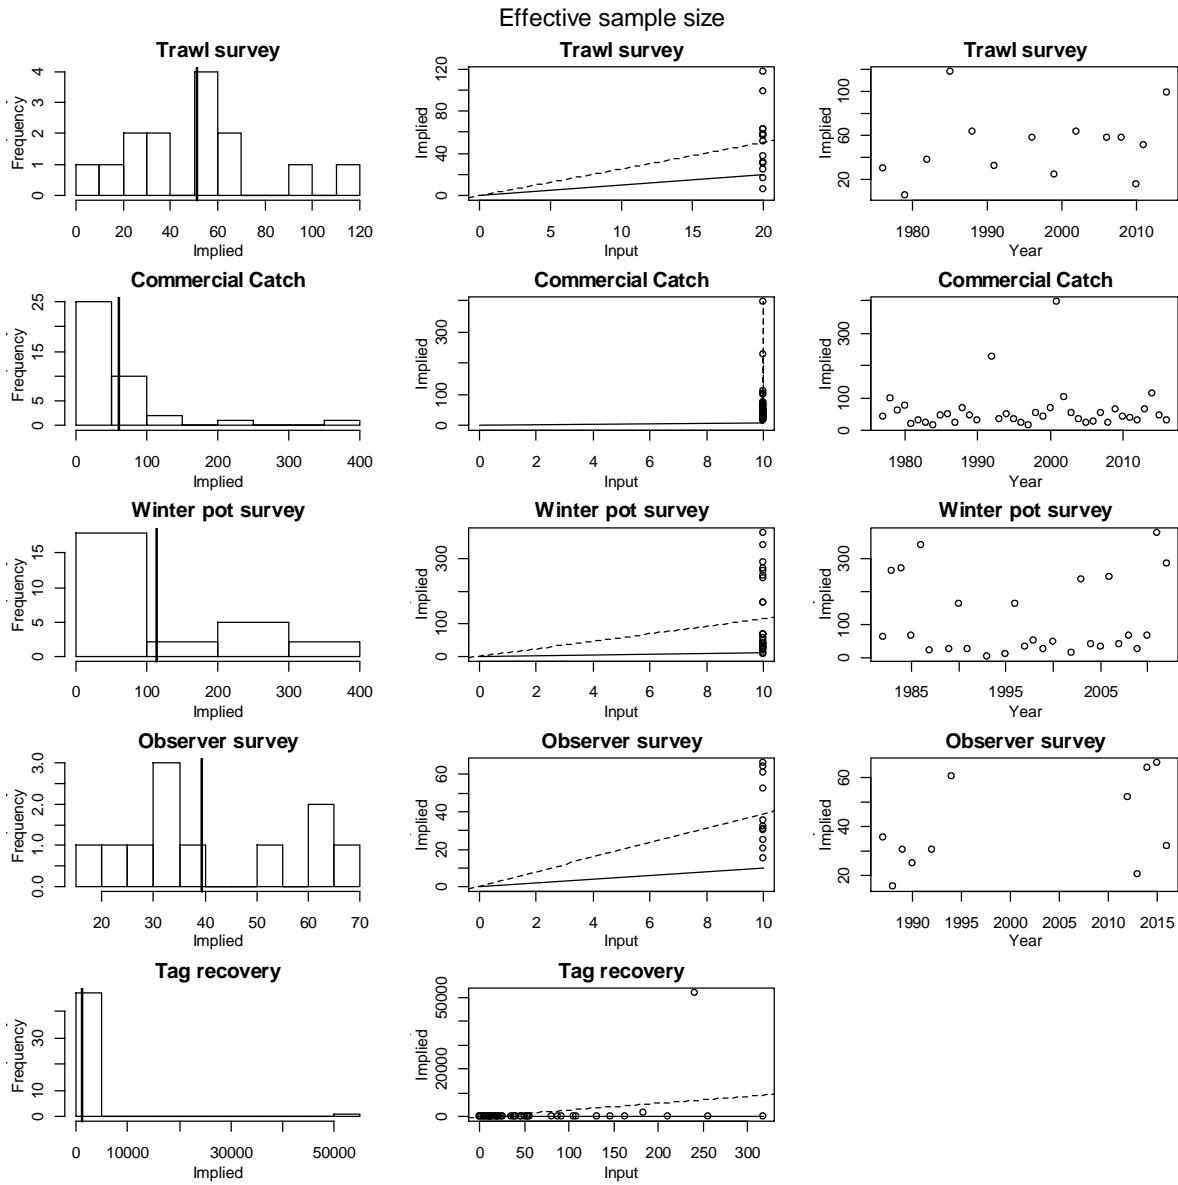

Figure C6-2: Implied effective sample sizes. Figures in the first column show implied effective sample size (x-axis) vs. frequency (y-axis). Vertical solid line is the mean implied effective sample size. The second column shows input sample sizes (x-axis) vs. implied effective sample sizes (y-axis). Dashed line indicates the linear regression slope, and solid line is 1:1 line. The third column shows years (x-axis) vs. implied effective sample sizes (y-axis).

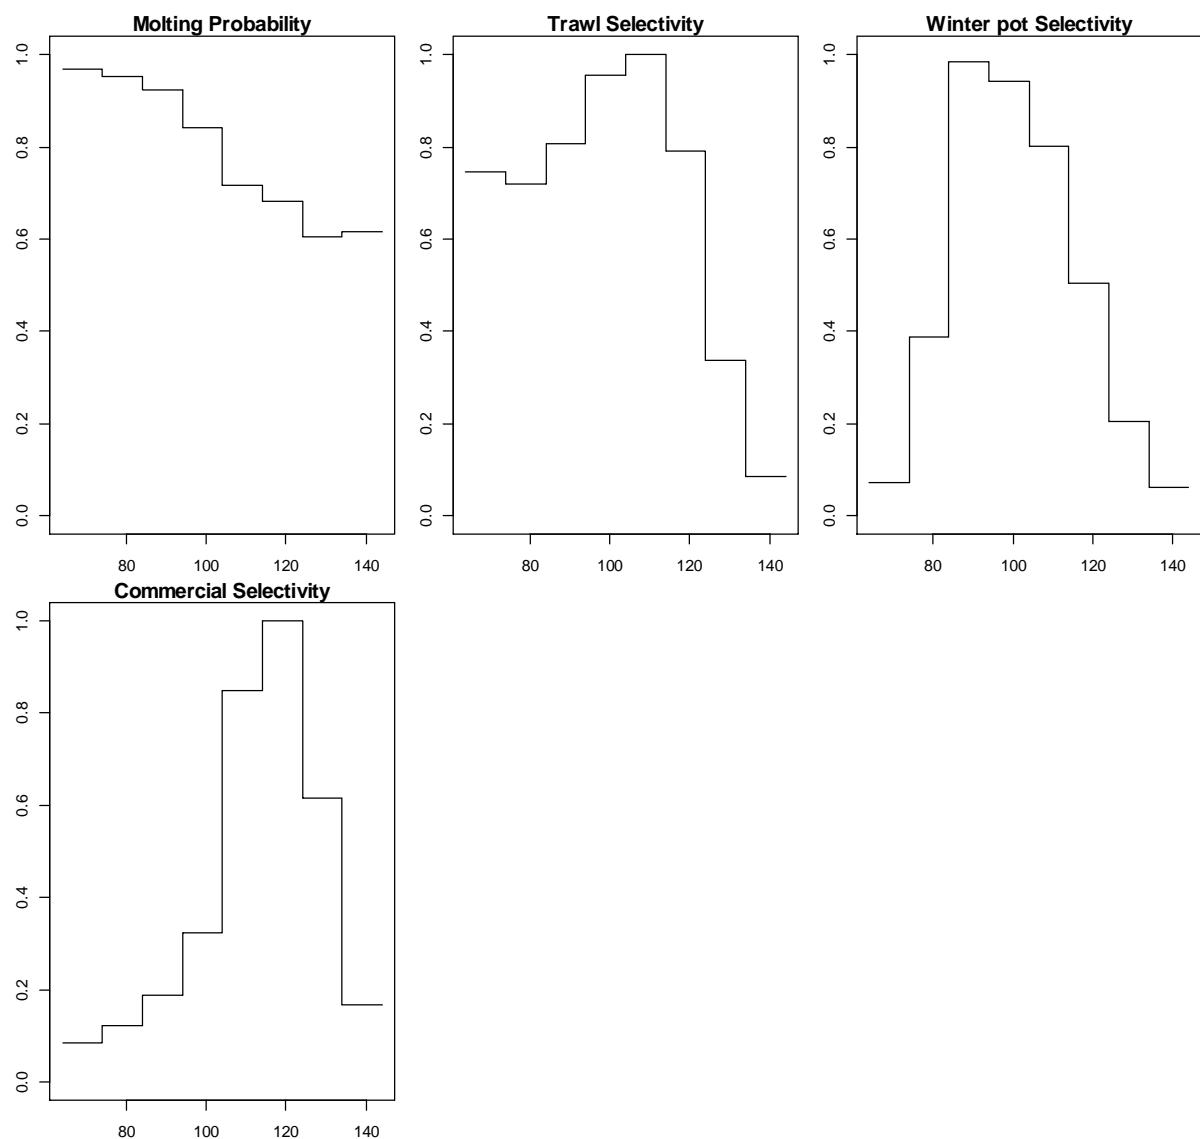

Figure C6-3. Model estimated annual molting probability, trawl survey selectivity, winter pot survey selectivity, and summer commercial fishery selectivity. X-axis is carapace length (mm).

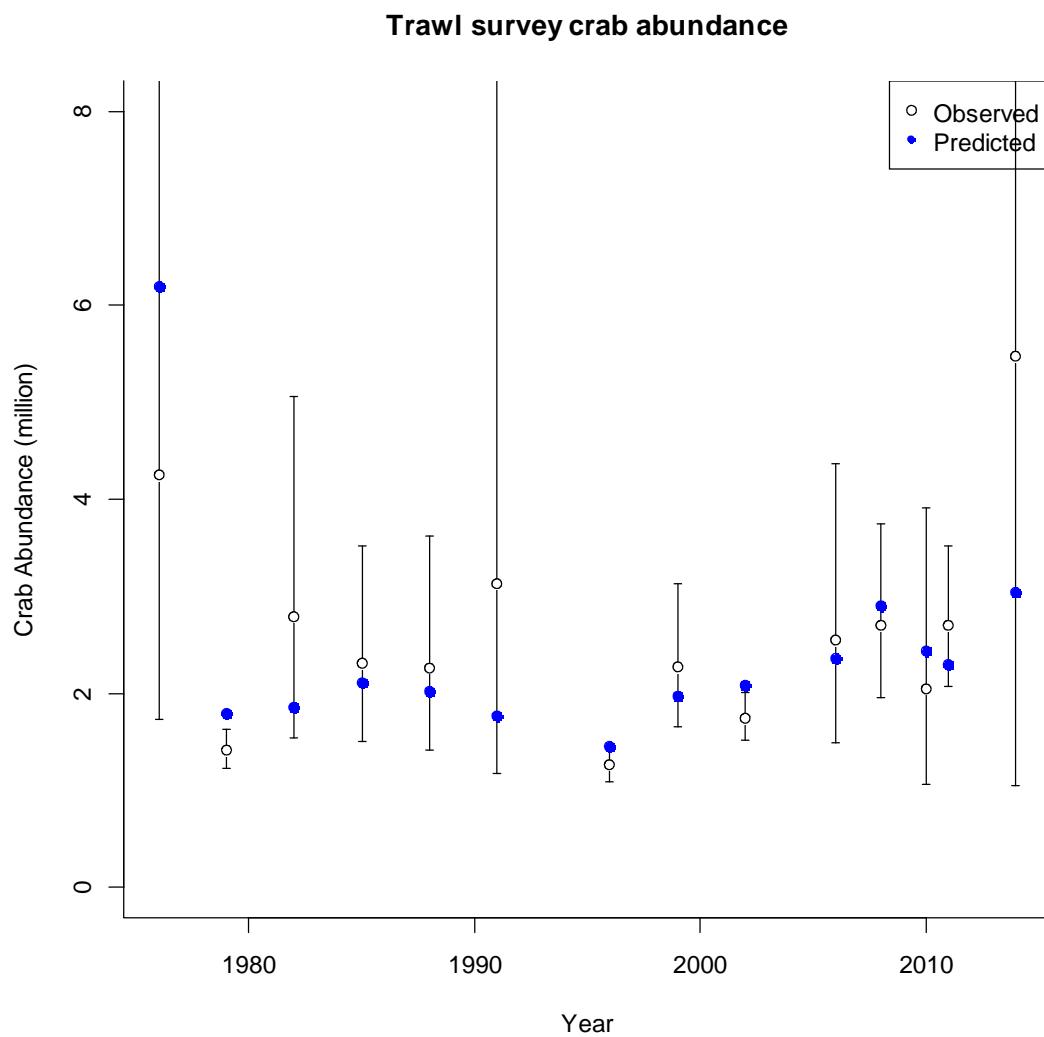

Figure C6-4. Observed and model estimated trawl survey male abundances over time with 95% confidence intervals (crab  $\geq$  74 mm CL).

### Modeled crab abundance Feb 01

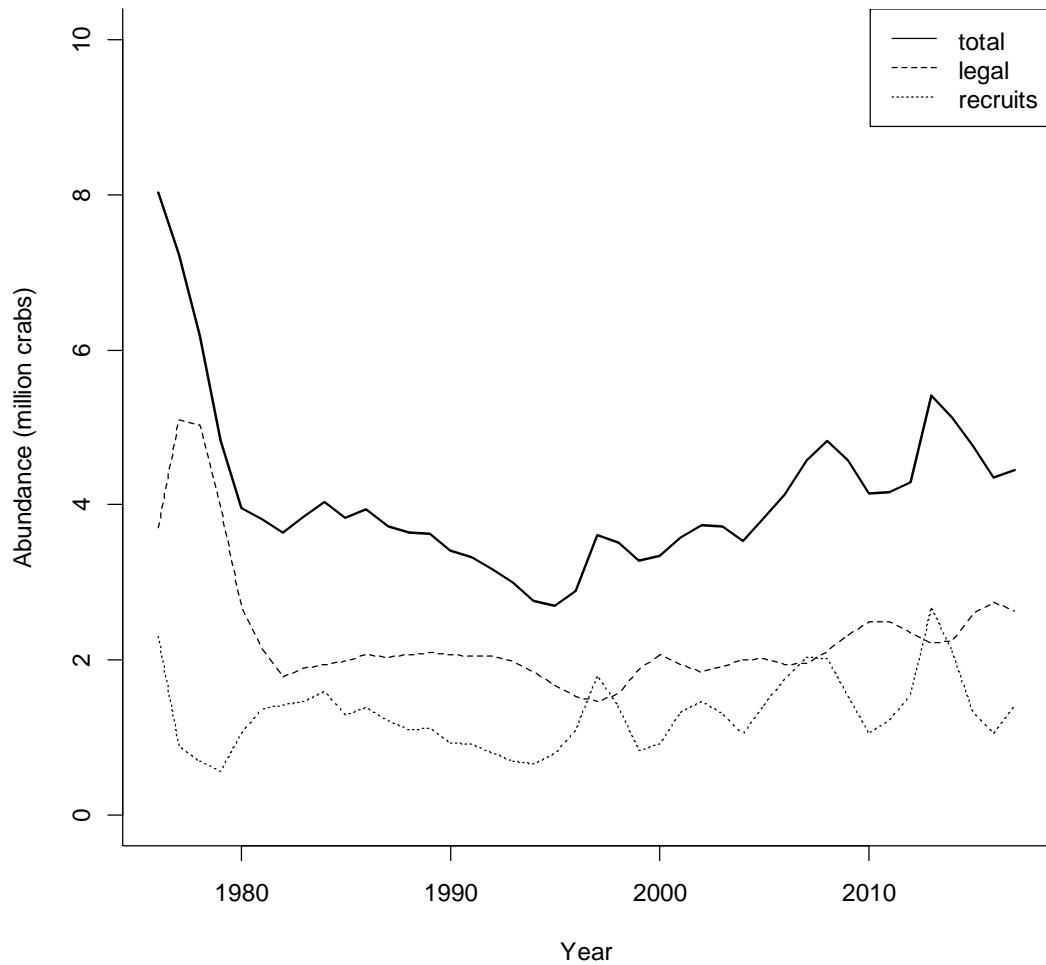

Figure C6-5. Estimated abundance of legal males from 1976-2016.

**MMB Feb 01**

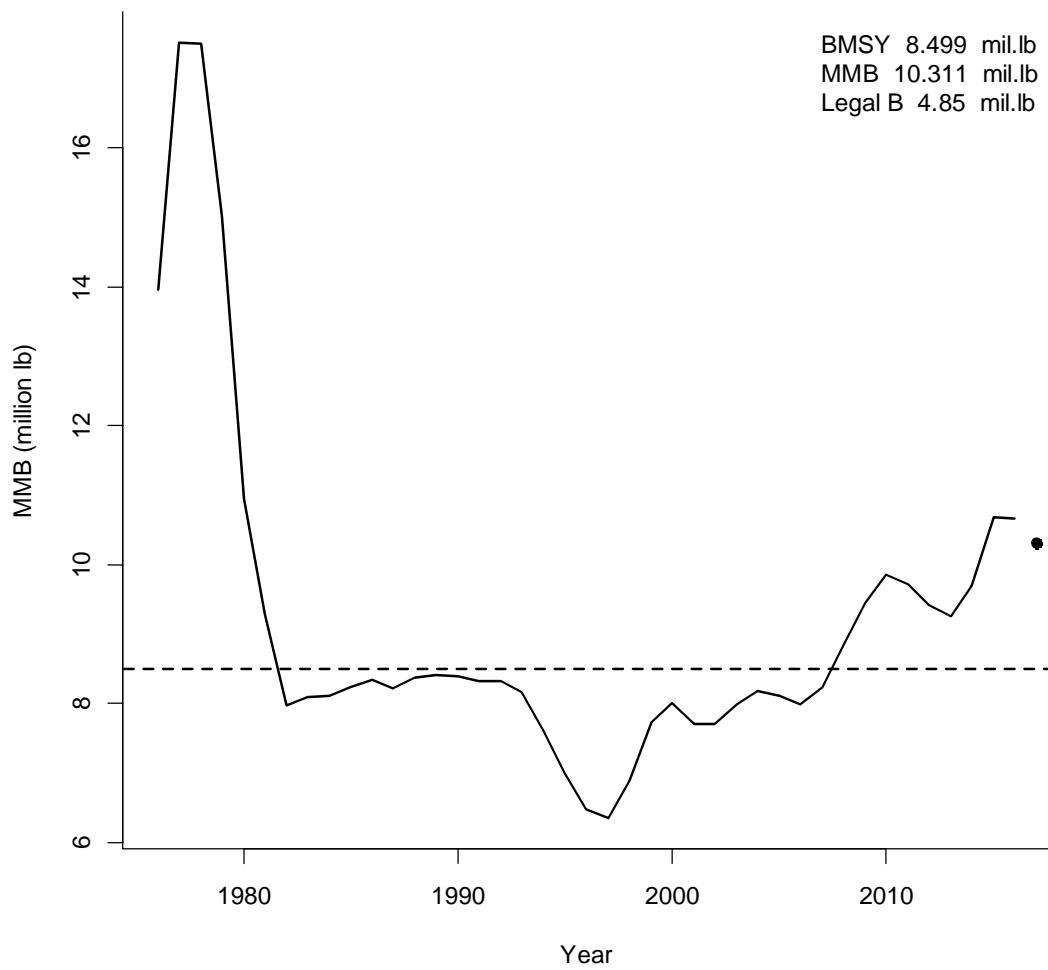

Figure C6-6. Estimated abundance of leg recruits from 1976-2016. Dash line shows  $B_{msy}$  (Average MMB of 1980-2016).

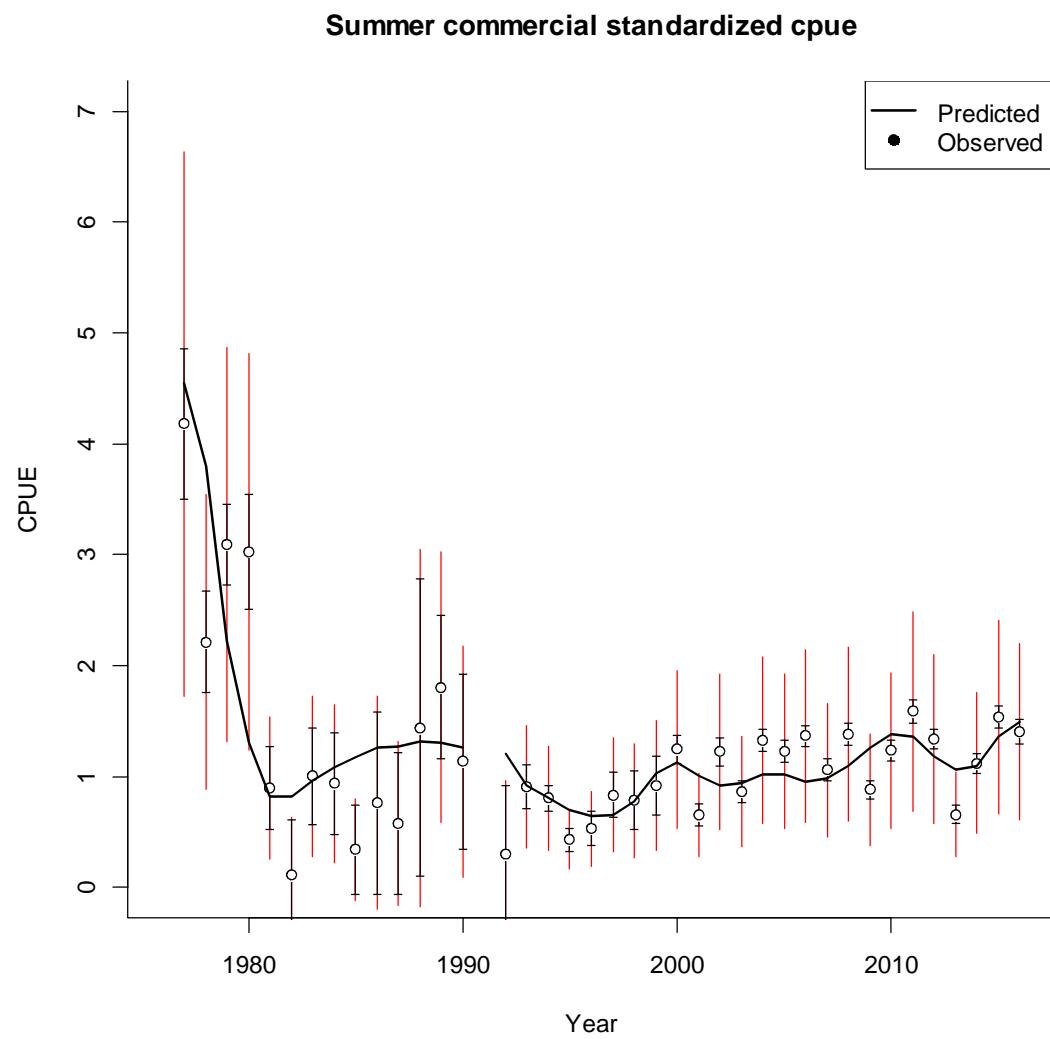

Figure C6-7. Summer commercial fishery standardized cpue during 1977-2016.

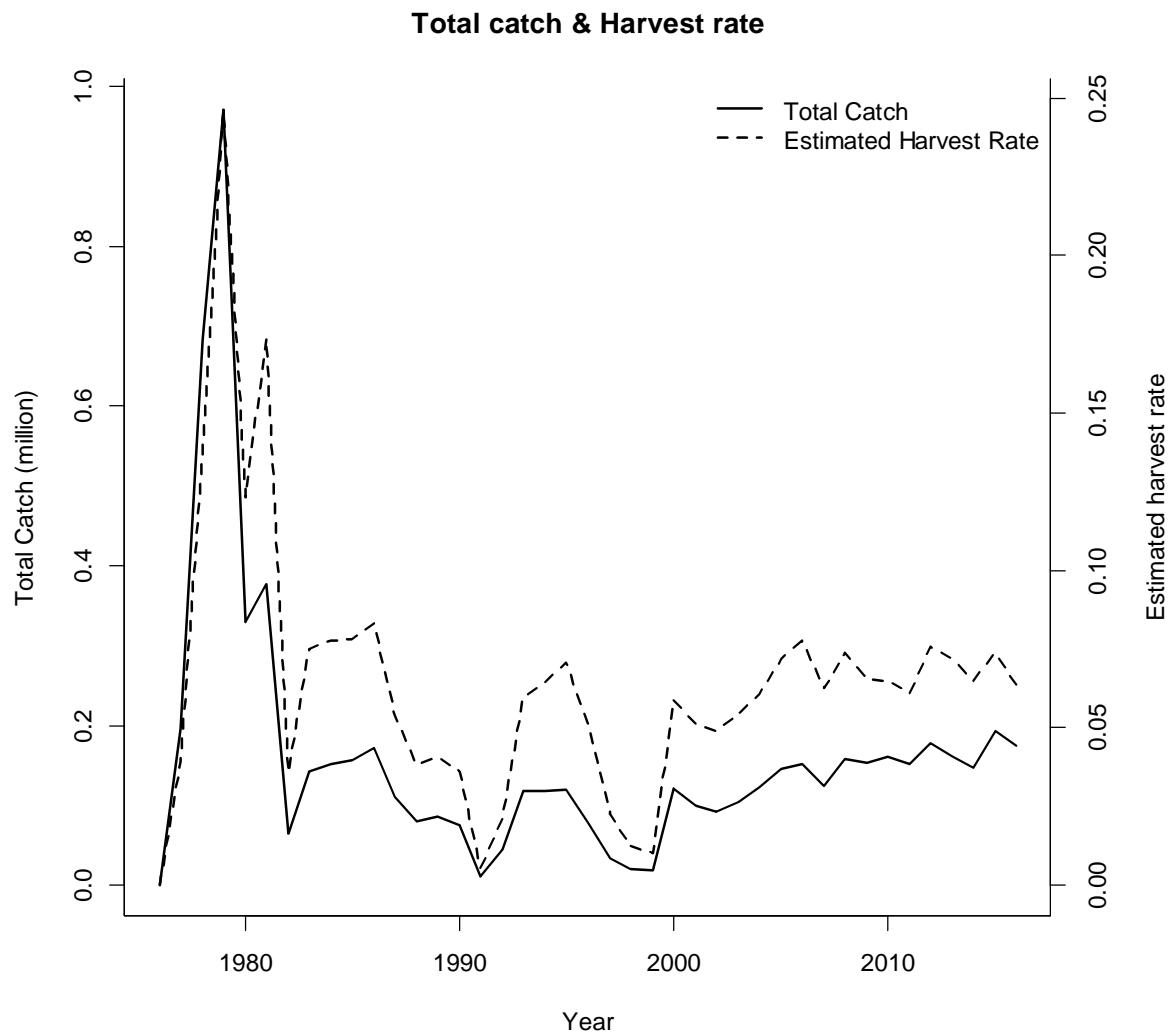

Figure C6-8. Total catch and estimated harvest rates during 1976-2016.

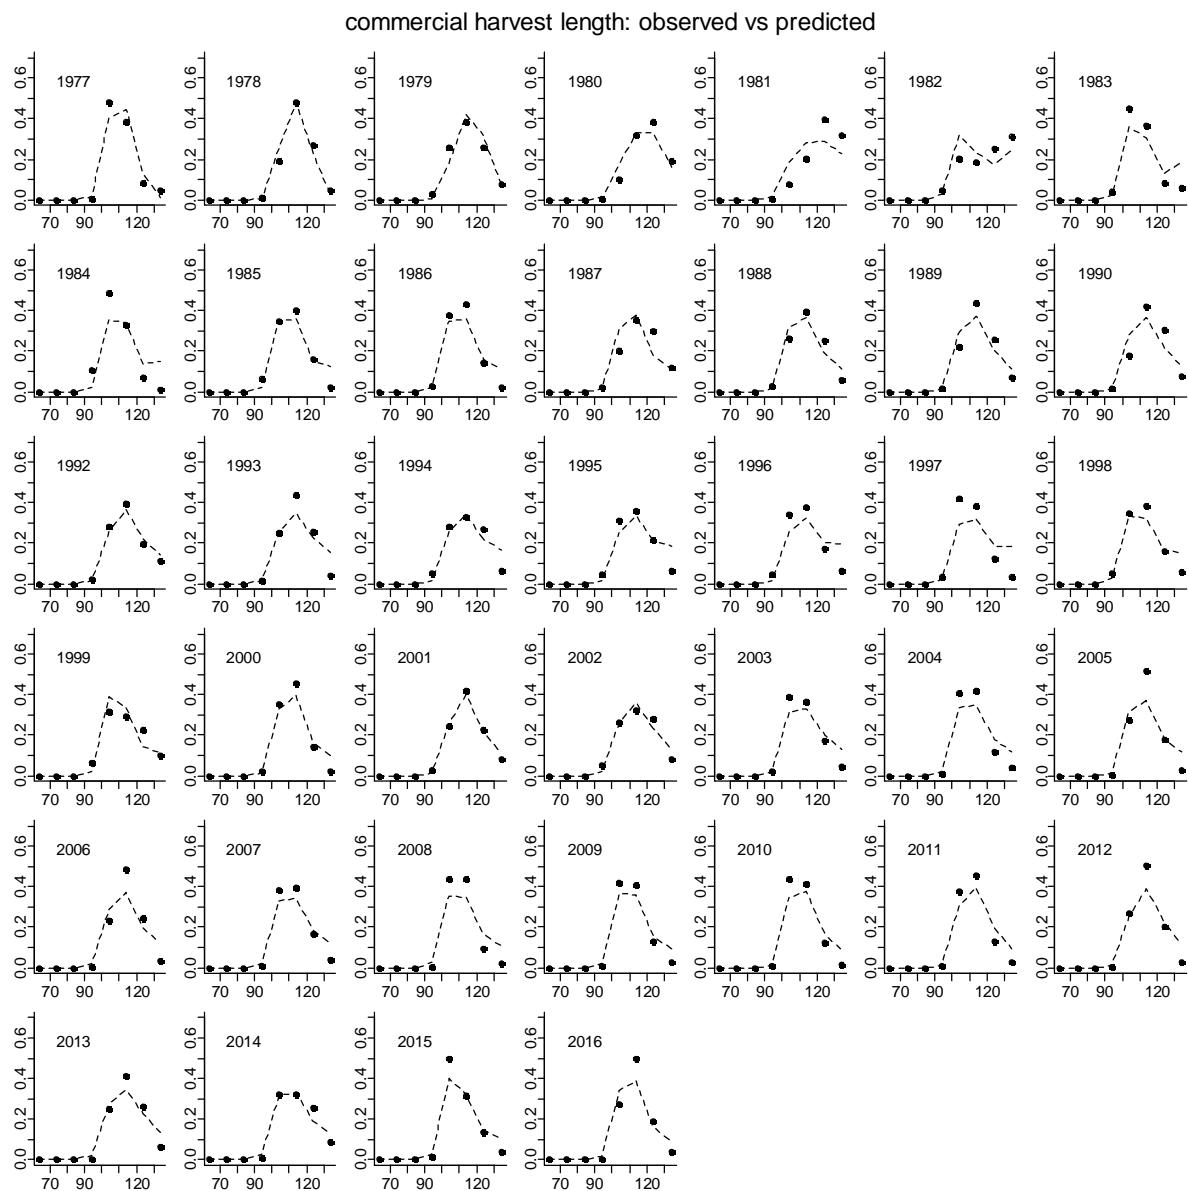

Figure C6-9. Predicted (dashed line) vs. observed (black dots) length class proportions for commercial catch.

### Winter pot length: observed vs predicted

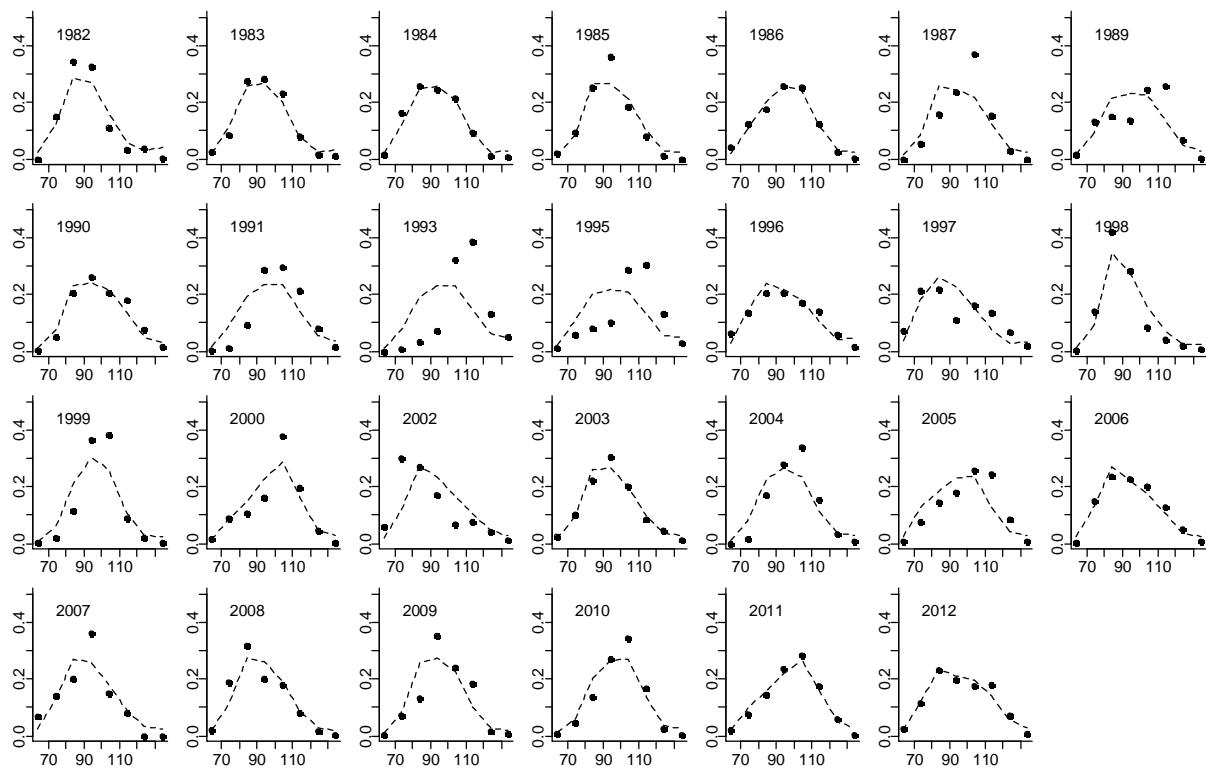

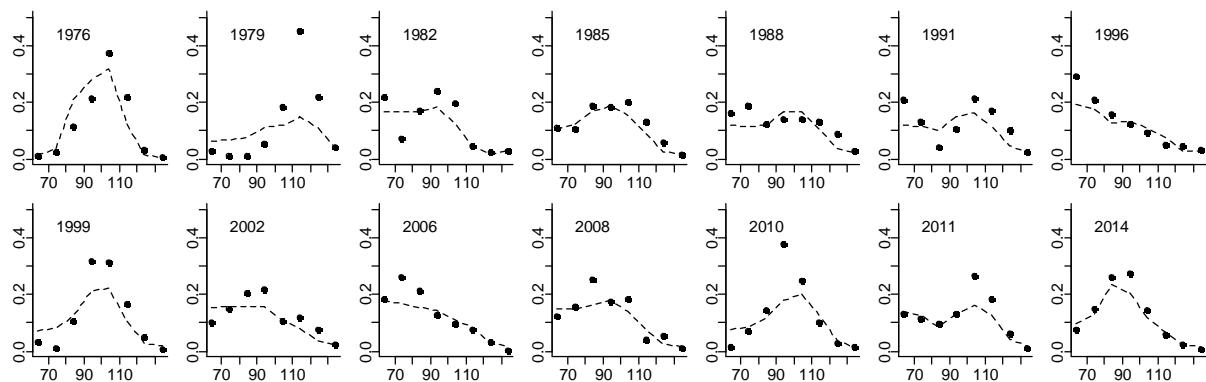

Figure C6-10. Predicted (dashed line) vs. observed (black dots) length class proportions for the winter pot survey.

Trawl length: observed vs predicted

Discards length: observed vs predicted

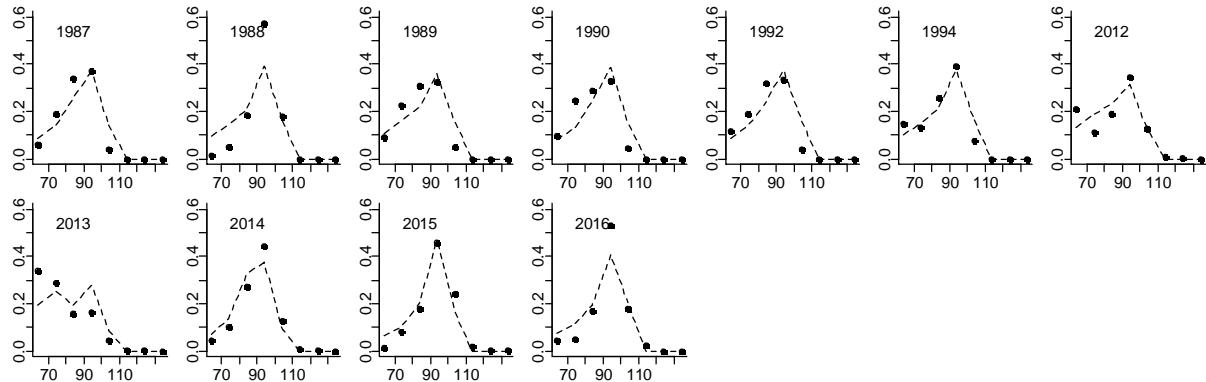

Figure C6-11. Predicted (dashed line) vs. observed (black dots) length class proportions for the trawl survey and observer survey.

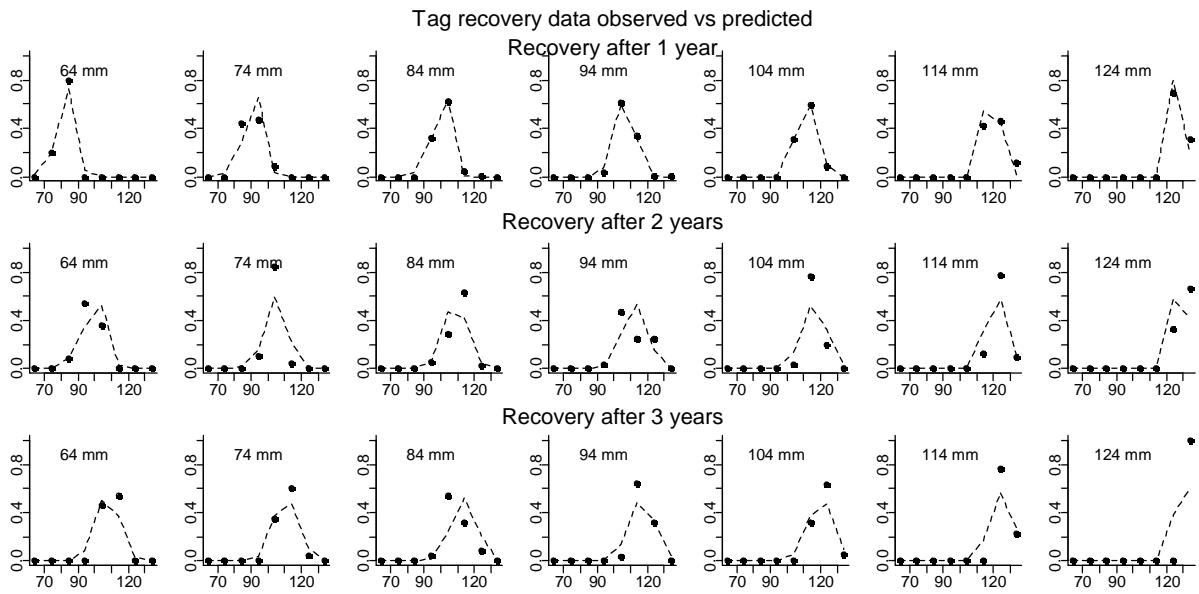

Figure C6-12. Predicted (dashed line) vs. observed (black dots) length class proportions for tag recovery data.

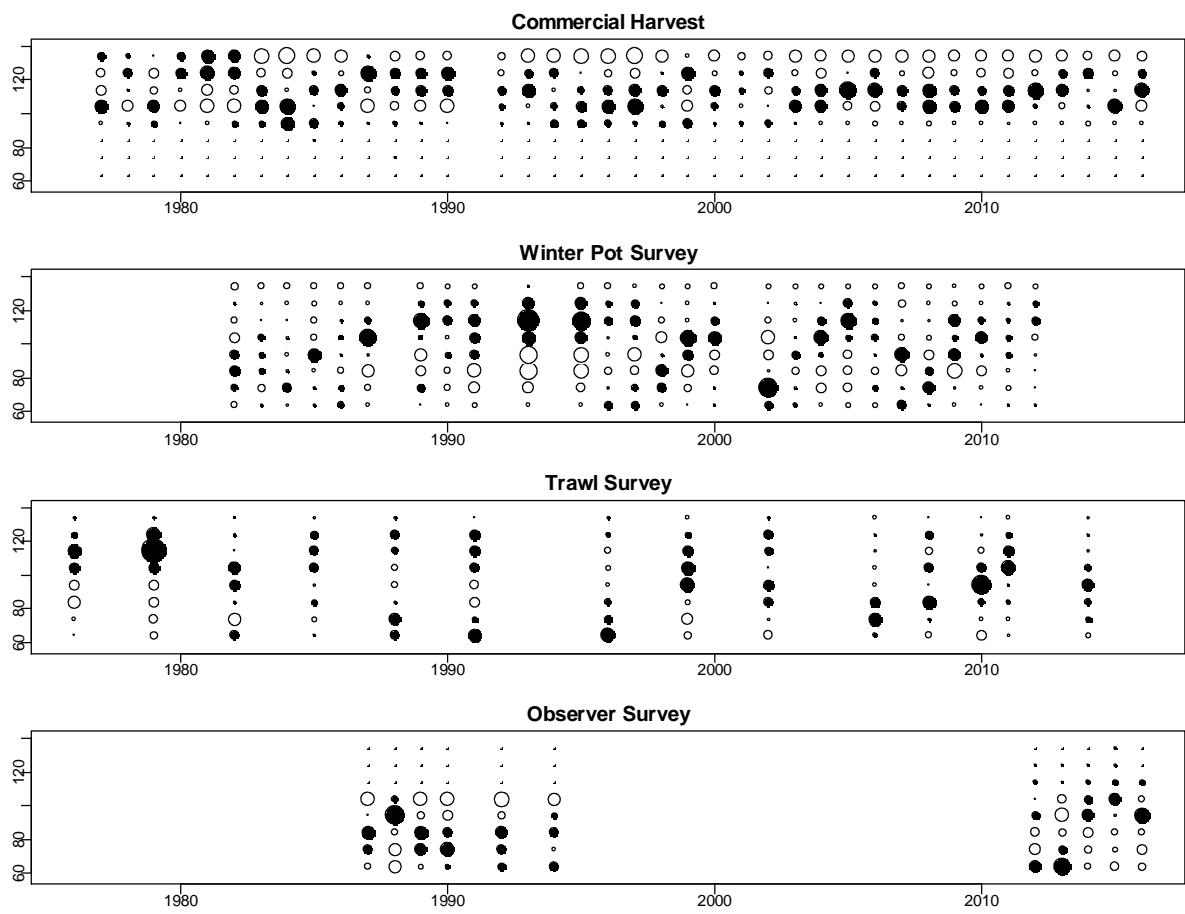

Figure C6-13. Bubble plots of predicted and observed length proportions. Black circle indicates model estimates lower than observed, white circle indicates model estimates higher than observed. Size of circle indicates degree of deviance (larger circle = larger deviance).

Table C6-1 . Summary of parameter estimates for a length-based stock synthesis population model of Norton Sound red king crab.
