

# Halibut survival after deck-sorting: observations using satellite tags

Presentation by:

Dr. Craig S. Rose, FishNext Research LLC

**Tuesday, October 3, 5:30 PM**

**Advisory Panel Room**

Can satellite tags with minimal sensors effectively indicate halibut survival following deck release?

How do indicated survivals for up to 60 days correspond with viability-based estimates?

Which factors strongly influence survival?

Time-on-deck? Towing Time? Vessel? Fishery? Fish size? Water temperature? Mud in the catch? . . . . .

Research funded by the North Pacific Research Board and the  
NOAA Saltonstall-Kennedy Program
