

# Dusky Rockfish GOA Groundfish Plan Team

Ben Williams, Pete Hulson, Chris Lunsford, and Bridget Ferriss

November, 2022

**NOAA**  
**FISHERIES**

# Teams or SSC Comments

- *The Team recommends all GOA authors evaluate any bottom trawl survey information used in their assessment prior to 1990 including the 1984 and 1987 surveys and conduct sensitivity analyses to evaluate their usefulness to the assessment” (PT, November 2021)*
  - The 1980s survey data has been removed – iterative model evaluations were completed.
- *“...Finally, the SSC requests that design-based estimates of survey biomass be included in comparisons with VAST model estimates.*  
*The SSC requests the assessment author justify the use of the new parameterization of VAST specifically as it relates to dusky rockfish. Past SSC discussions regarding the general implementation of VAST in assessments precluded a highly prescriptive approach and specifically recommended allowing for some species-specific adaptations of the VAST framework “(October 2020)*
  - A suite of VAST parameterizations, associated diagnostics and design-based survey estimates have been explored and are provided as an appendix. The author’s recommended model uses a lognormal error model instead of the GAP default model.
- *“The SSC registers concern with the large positive retrospective pattern in the recommended model and suggests that further investigation of this be a very high priority.” (January 2020)*
  - Issues with the retrospective pattern are addressed with the author’s recommended model, changing the Mohn’s rho value from 0.51 to -0.123.

# Data Summary

Source	Data	Years
NMFS Groundfish survey	Survey biomass	1990-1999 (triennial), 2001-2019 (biennial), <b>2021</b>
	Age composition	1990-1999 (triennial), 2003-2019 (biennial), <b>2021</b>
U.S. trawl fishery	Catch	1961-2020, <b>2021-2022</b>
	Age composition	1998-2002, 2004-2006, 2008-2018 (biennial), <b>2020</b>
	Length composition	1991-1997, 2003, 2007-2019 (biennial), <b>2021</b>

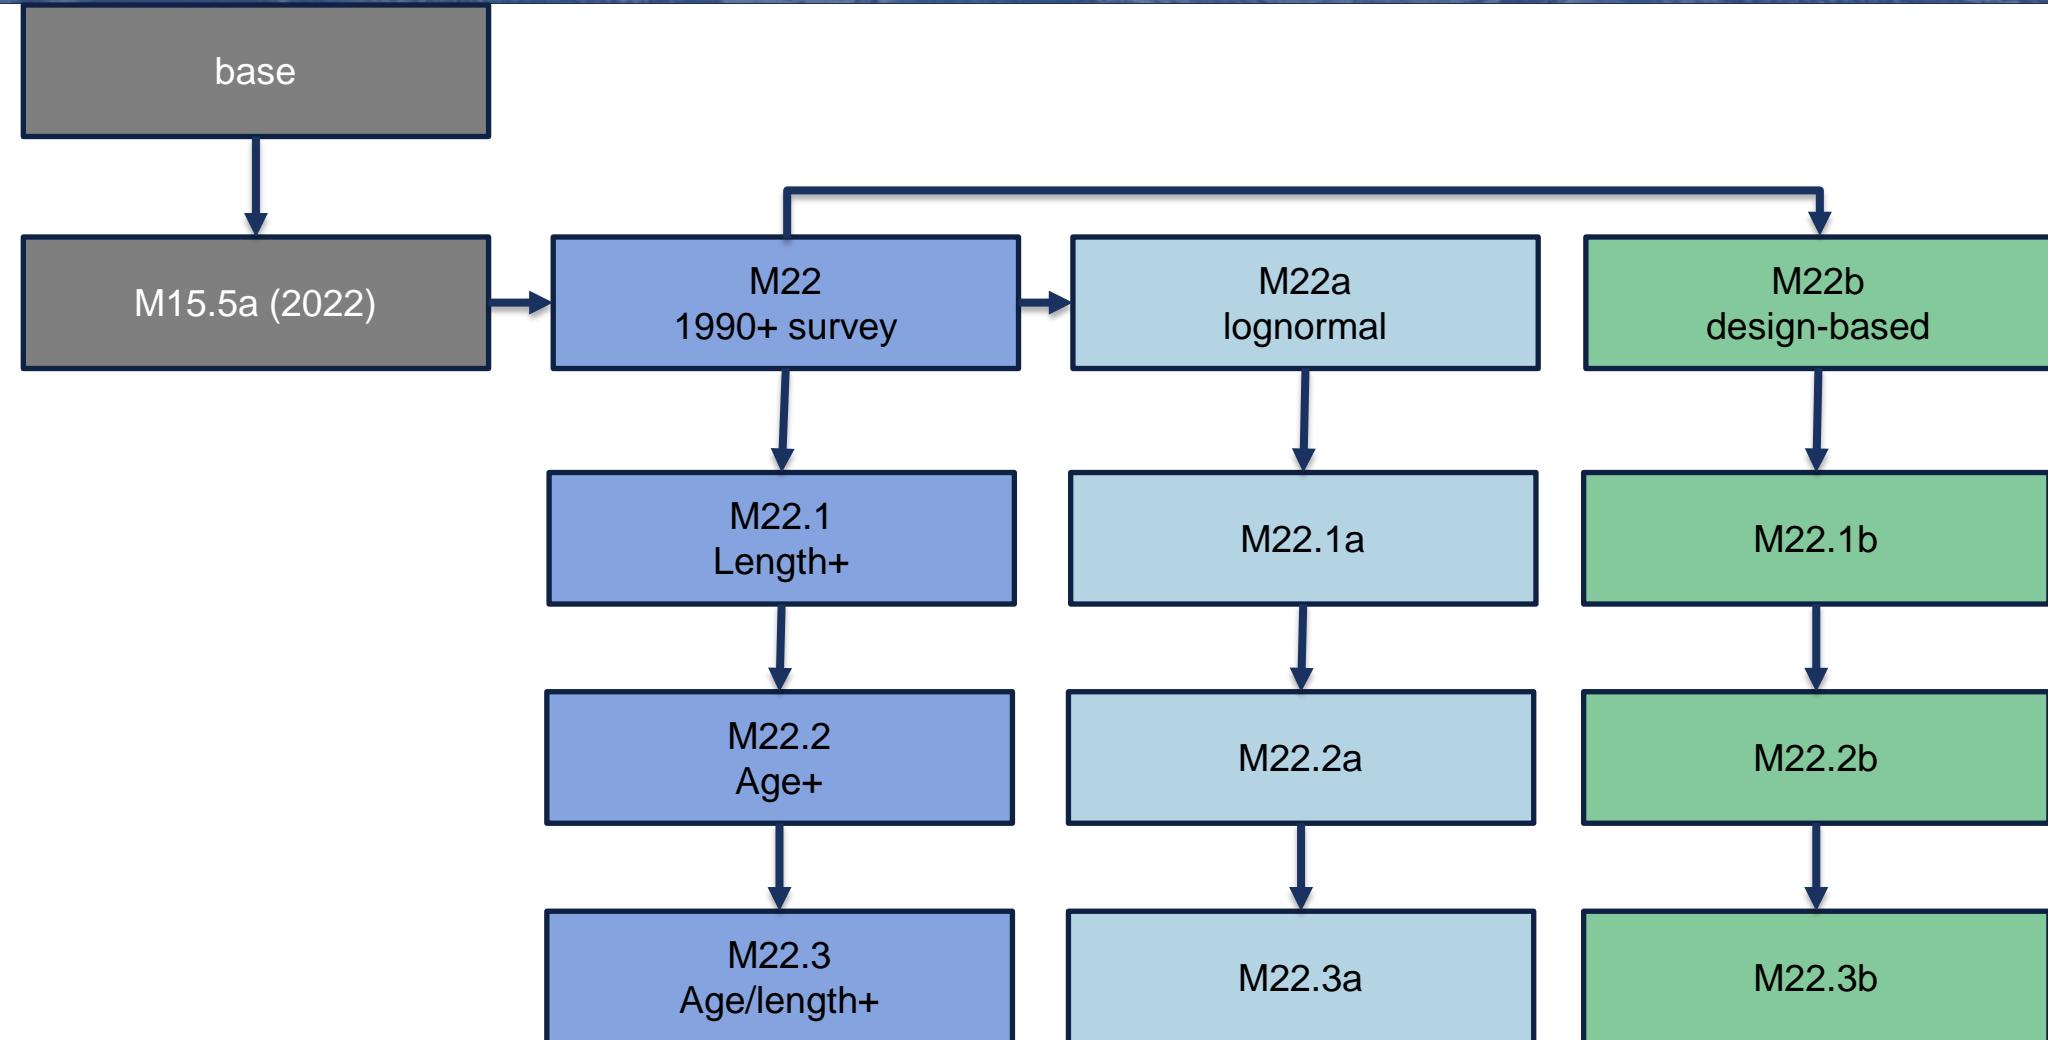

# Model Variants

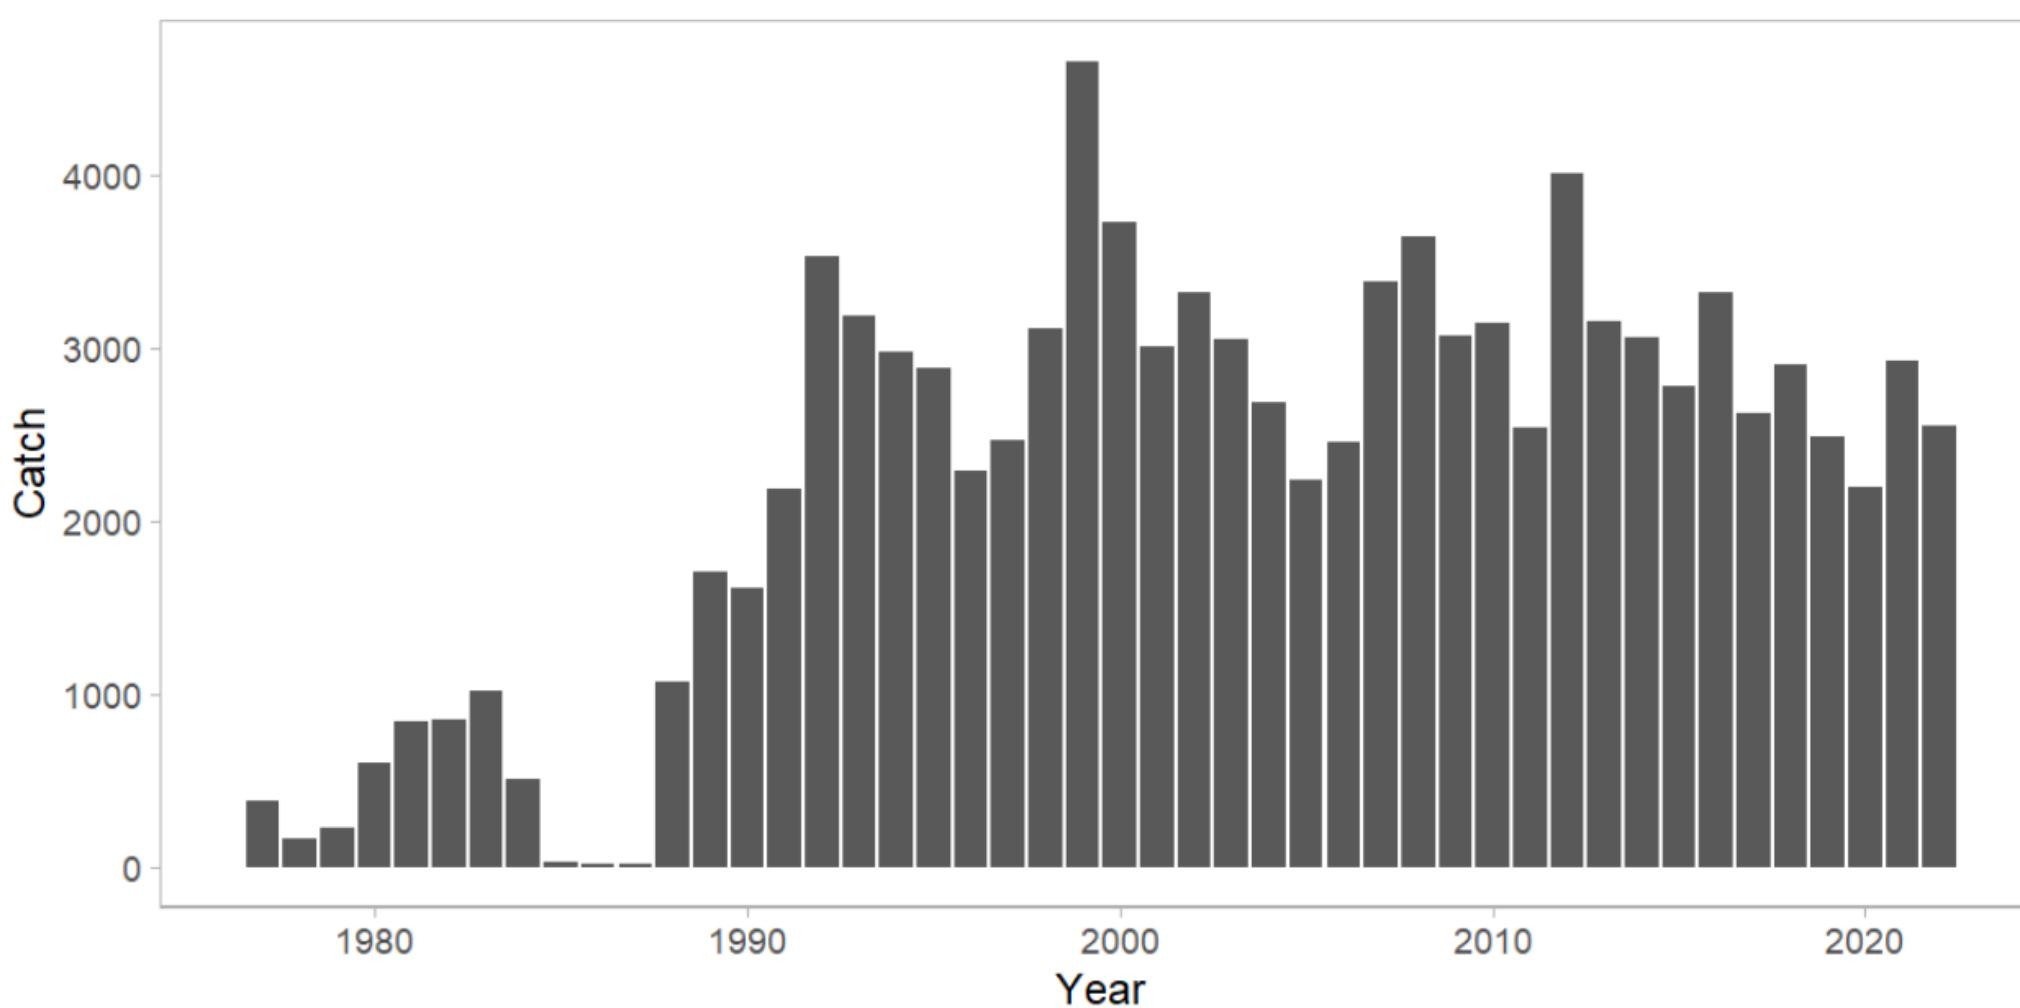

Model	Description
base	2020 model (m15.5a) and results (includes 1980s survey data)
m15.5a	base model w/data updated through 2022, using GAP default VAST
<b>m22</b>	<b>m15.5a using GAP default VAST (survey data 1990+)</b>
m22.1	m22 w/increased length plus group
m22.2	m22 w/increased age plus group
m22.3	m22 w/increased age & length plus groups
m22a	m22 using lognormal error VAST (survey data 1990+)
m22.1a	M22.1 w/lognormal VAST
m22.2a	M22.2 w/lognormal VAST
m22.3a	M22.3 w/lognormal VAST
m22b	m22 using design-based survey abundance (1990+)
m22.1b	M22.1 w/db survey
m22.2b	M22.2 w/db survey
m22.3b	M22.3 w/db survey

# Risk Table

Assessment-related considerations	Population dynamics considerations	Environmental/ ecosystem considerations	Fishery Performance
<b>Level 2:</b> Substantially increased concerns	<b>Level 2:</b> Substantially increased concerns	Level 1: No increased concerns	Level 1: No increased concerns

**Assessment** - sensitivity of the model to the scale of the VAST model biomass estimates, as well as the low uncertainty from VAST

**Population dynamics** –skip spawning has been observed for this stock, levels unknown

**Environmental** - environmental mechanisms for changes in survival and productivity of dusky rockfish remain unknown, though indication that structural epifauna habitat may be decreasing

**Fishery performance** - catches are well below ABC

# Harvest Recommendation

		W. Yakutat	E. Yakutat/Southeast
2023	ABC (t)	90	31
2024	ABC (t)	85	30

# Conclusions

- Recommendation
  - Increase age and length plus groups, change to lognormal error in VAST (model 22.3a)
- Data Gaps and Future Research Priorities
  - We have no information on larval, post-larval, or early-stage juvenile dusky rockfish
  - Habitat requirements are either unknown or anecdotal – research to identify HAPC
  - Aging is a continual issue (challenging to age well)
  - Reproductive biology is poorly understood, though skip spawning has been observed – the spatial and temporal extent of skip spawning should be a research priority
  - Exploration of data weighting, possibly the inclusion of a variance inflation parameter to increase the variance on VAST estimated trawl surveys
