

SUMMARY OF FOREIGN FISHING OFF ALASKA
May 1 - May 20, 1977

A total of 217 individual foreign fishing and associated support ships (23 Soviet, 191 Japanese, 2 South Korean, and 1 Taiwanese) engaged in fisheries off Alaska during May. That was an increase of 110 from the previous month and a decrease of 513 from May 1976.

SOVIET ACTIVITIES

The 23 individual Soviet vessels included 18 stern trawlers, 3 refrigerated transports, 1 research vessel, and 1 rescue vessel. This is a decrease of 5 from the previous month and a decrease of 86 from May 1976.

Groundfish Trawl Fishery

The Soviet groundfish trawl fishery consisted of from 9 to 12 stern trawlers fishing in the western Aleutians. Three of these vessels spent mid-month in the Bering Sea fishing for pollock. The fishery was supported by two refrigerated transports and one tug.

Pollock and Herring Fishery

The Soviet effort for pollock consisted of 2 to 4 stern trawlers in the northern Bering Sea along the Continental Shelf edge, with an incidental catch of herring. One refrigerated transport supported the fishery during the month.

JAPANESE ACTIVITIES

The 191 individual Japanese vessels that engaged in fisheries off Alaska included 2 crab factory vessels with 12 catcher vessels, 3 fish factory vessels with 60 catcher vessels, 78 stern trawlers, 19 longliners, 9 refrigerated transports, 6 cargo vessels, and 2 tankers. This represents an increase of 113 from the previous month and a decrease of 390 from May 1976. The majority of this decrease was due to the non-arrival of the high seas salmon fleets in the Alaskan area.

Crab Fishery

Two crab factory ships and 12 catcher vessels continued to fish in Area B, just south of the Pribilof Islands. Four refrigerated transport vessels supported the fishery during the month.

Groundfish Trawl Fishery

The Japanese trawl fisheries along the Continental Shelf continued from April with independent stern trawlers operating in the Gulf of Alaska, Bering Sea and Aleutians.

The five individual stern trawlers in the Gulf operated off southeast Alaska and were supported by one cargo vessel during the month.

Nineteen stern trawlers fished for groundfish in the central Bering Sea. The major groundfish effort occurred in the Aleutians. During the third week in May, 44 independent stern trawlers checked in to the Aleutian area. They joined 9 other stern trawlers already fishing there. During the month the fishery was supported by 2 refrigerated transports, 1 cargo vessel and 1 tanker.

Pollock Fishery

Three factory ship fleets fished for pollock along the Continental Shelf in the central Bering Sea. One fleet arrived in late April, one in early May, and the other in mid-May. The fleets involved 3 factory vessels, 60 trawlers, 4 refrigerated transports, 4 cargo vessels and 1 tanker.

Sablefish Fishery

Thirteen longline vessels fished for sablefish in the Gulf of Alaska, the Aleutians Islands, and the Bering Sea. Five vessels fished in the Aleutians, and two vessels fished in the central Bering Sea near the Pribilof Islands. Six individual longline vessels operated in the Gulf of Alaska in three areas: southeast Alaska, Yakutat grounds, and Albatross Bank of Kodiak Island.

Herring Fishery

The Japanese herring gillnet fishery off the western Alaskan coastline began in the first week of May. By mid-month six vessels were fishing on Bristol Bay flats south of the area closed to herring fishing.

SOUTH KOREAN ACTIVITIES

Two longline vessels continued to fish for sablefish along the Continental Shelf edge from Kodiak Island to the eastern Aleutians.

TAIWANESE ACTIVITIES

One stern trawler began fishing for groundfish in the central Bering Sea in mid-May.

TO: Dr. Francis Fukuhara, Director, REFM Division, NWAFC
FM: Dr. Alan Beardsley, Director, Kodiak Facility, NWAFC
SUBJ: Japanese Snow Crab Fishery

In recent weeks there has been considerable industry interest in subject fishery in the eastern Bering Sea. Information on fishing areas, species composition of the catch-to-date, and the projected date of termination of fishing has been specifically requested. This memorandum is a summary of current available information on these subjects and can be distributed to any one interested.

The rules and regulations concerning the 1977 foreign crab fishery are contained in the Federal Register (FR), Vol. 42. No. 29 on page 8841 (Attachment A) as well as in the Preliminary Fishery Management Plan (PFMP) on crab. The principal difference between the FR and the PFMP is that the northern boundry of A and B areas is 58-09 N in the FR as opposed to 58-00 N in the PFMP. In addition many people have understood the following section of the PFMP:

"No more than 8,100 metric tons of snow (Tanner crab) may be taken by foreign fishermen from the area east of 173° W longitude and south of 58° N latitude"

to mean the two boundries were simutaneously in effect, i.e., there would be no fishing at any time east of 173° W or south of 58° N for the 4,400 metric ton allocation outside the A and B quota areas. However, the FR specifically states that the 4,400 metric tons can be harvested south of 58° N as long as the vessels remain west of 173° W and east of 173°W as long as vessels remain north of 58-09 N. Incidentally the Japanese Fishery Agency has further divided the 4,400 metric tons between two crab fleets, allowing the factoryships to catch 1,673 metric tons in the area east of 175° W and the independent vessels 2,727 metric tons west of 175° W. Areas and quotas as defined in the FR are shown in Attachment B.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud.

2. The second part of the document outlines the various methods used to collect and analyze data. It describes the use of statistical techniques to identify trends and anomalies in the data, and the importance of using reliable sources of information.

3. The third part of the document discusses the role of the auditor in the financial reporting process. It highlights the need for auditors to exercise professional judgment and to maintain independence and objectivity in their work.

4. The fourth part of the document addresses the issue of the reliability of financial statements. It discusses the factors that can affect the reliability of financial statements, such as the quality of the underlying data and the accuracy of the accounting methods used.

5. The fifth part of the document discusses the importance of transparency and disclosure in financial reporting. It emphasizes that companies should provide clear and concise information about their financial performance and the risks they face.

6. The sixth part of the document discusses the role of the regulatory framework in ensuring the integrity of the financial system. It highlights the need for strong and effective regulations to prevent and detect fraud and to ensure that companies are held accountable for their actions.

7. The seventh part of the document discusses the importance of the internal control system in preventing and detecting fraud. It emphasizes that companies should have a robust internal control system in place to ensure that all transactions are properly recorded and that there are no opportunities for fraud.

8. The eighth part of the document discusses the role of the external audit in providing assurance on the financial statements. It highlights the need for auditors to perform a thorough and independent audit of the financial statements to provide confidence to investors and other stakeholders.

9. The ninth part of the document discusses the importance of the audit committee in overseeing the financial reporting process. It emphasizes that the audit committee should be independent and should have the authority to oversee the work of the auditor and to report to the board of directors.

10. The tenth part of the document discusses the importance of the audit trail in providing evidence for the audit. It emphasizes that companies should maintain a clear and complete audit trail of all transactions and supporting documents to facilitate the audit process.

11. The eleventh part of the document discusses the importance of the audit report in providing information to investors and other stakeholders. It emphasizes that the audit report should be clear and concise and should provide a clear opinion on the financial statements.

12. The twelfth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

13. The thirteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

14. The fourteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

15. The fifteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

16. The sixteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

17. The seventeenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

18. The eighteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

19. The nineteenth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

20. The twentieth part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

21. The twenty-first part of the document discusses the importance of the audit process in providing assurance on the financial statements. It emphasizes that the audit process should be thorough and independent and should provide confidence to investors and other stakeholders.

Factoryship catches through May 25 are shown in Attachment C. Using average catch rates through May 20, the following days remaining by area and completion dates for the factoryship fishery are projected.

	<u>Keiko Maru</u>	<u>Koyo Maru</u>
Area A	0	20
Area B	48	38
Area C	<u>25</u>	<u>24</u>
	73 days (August 1)	82 days (August 10)

These figures are based on the assumption the Koyo Maru goes back to Area A to complete her remaining 476 metric tons at a catch rate of 23.4 metric tons per day. In addition catch rates in Area C are estimated to be the same as in Area B although from NMFS information on the distribution and abundance of snow crab in the Bering Sea (Attachment D) we suspect reduced harvest rates in C as compared to B which would require additional time for harvest. We cannot even make an educated guess at the time required by the independent vessels to harvest the 2,727 metric tons of crab although we know 11 boats will be fishing beginning about June 1.

Information contained in the 10-day reports of the factoryships as required by the PFMP and FR are presented in Attachment E. This table indicates catches in the A quota area exceeded 95% Chionoecetes bairdi and in the B quota area C. bairdi constituted about 43% of the catch. Information in Attachment D suggests some C. bairdi will also be taken in areas C and D.

Subpart G—North Pacific Ocean and Bering Sea

611.90 Crabs.

(a) Purpose. Regulations of this section shall apply to: Red king crab (*Paralithodes camtschatica*), Blue king crab (*Paralithodes platypus*), brown king crab (*Lithodes aequispina*), snow (Tanner) crabs (*Chionoecetes bairdi* and *C. opilio*), taken by foreign fishing vessels with a valid permit during the period March 1, 1977 to December 31, 1977 within the North Pacific Ocean and Bering Sea over which the United States exercises exclusive fishery management authority. Unless otherwise defined herein, all other terms used in this Subpart will have the meanings ascribed to them in Subpart A of these regulations.

(b) Area quotas. (1) No more than 12,500 metric tons of snow (Tanner) crab may be taken by foreign fishing vessels from that portion of the Bering Sea area over which the United States exercises fishing jurisdiction north of 56° 00' N. lat. and west of 164° W. long. Of this 12,500 metric ton quota:

(i) No more than 2,500 metric tons of snow (tanner) crab may be taken by foreign fishing vessels from the area bounded by straight lines connecting the following coordinates in the order listed:

58°09' N. lat.—164°00' W. long.; 57°00' N. lat.—168°00' W. long.; 57°40' N. lat.—169°50' W. long.; 57°40' N. lat.—170°50' W. long.; 57°00' N. lat.—170°50' W. long.; 56°20' N. lat.—169°55' W. long.; 56°20' N. lat.—168°00' W. long.; 56°00' N. lat.—168°00' W. long.; 56°00' N. lat.—164°00' W. long.; 58°09' N. lat.—164°00' W. long.; and

(ii) At least 4,400 metric tons must be taken from the area located to the north and west of straight lines drawn between the following coordinates:

56°00' N. lat.—173°00' E. long.; 58°00' N. lat.—173°00' W. long.; 58°09' N. lat.—173°00' W. long.; 58°09' N. lat.—164°00' W. long.; north along 164°00' W. long. to a distance of 12 nautical miles from the baseline used to measure the U.S. Territorial Sea.

(c) Open season. The open season for crab fishing by foreign vessels in the Bering Sea area over which the United States exercises fishery management authority shall begin at 0801 GMT on March 1, 1977, and terminate at a time and date to be determined and announced under paragraph (d).

(d) Closed season and areas. (1) The National Marine Fisheries Service shall maintain records of vessel days and catch of foreign vessels fishing for species under this section. Upon determination by the Director that foreign fishing vessels of a country have taken their assigned allocation of crab, notification of such determination shall be given to the appropriate agent or a government official of the country not less than 48 hours prior to the closure of such fishery. Upon notification, foreign fishing vessels shall cease the directed fishing for crab as of the specified closure date.

(2) It shall be unlawful for any foreign fishing vessel to fish for crabs at any time east of 164° W. Longitude and south of 56°00' N. Latitude in the Bering Sea, throughout the Northeastern Pa-

cific Ocean, and within 12 miles of the baselines used to measure the U.S. Territorial Sea.

(e) Gear restrictions. It shall be unlawful for any foreign fishing vessels fishing in the authorized area for crabs to use gear other than pots. A pot is a portable structure designed and constructed to capture and retain crabs alive in the water.

(f) Statistical reporting. The owner or operator of any foreign fishing vessel shall maintain catch and effort statistics and shall report the information, through its government, to the Director, Alaska Region, National Marine Fisheries Service, Juneau, Alaska, U.S.A. 99801.

(1) Annual. Each nation whose fishermen operate in the area shall report by May 30 of the following year, annual catch and effort statistics as follows: Effort in pots hauled and hours pots soaked Catch in metric tons and number of crabs. Each to be supplied by vessel class, by 10-day period, by ½° (lat.) by 1° (long.) statistical area, by the following species: Snow (Tanner) crab (*Chionoecetes bairdi* and *C. opilio*), and any other crab species.

(2) 10-day Periods. Each country will report within 3 days following each 10-day fishing period, provisional 10-day fishery information as follows: Effort in total pot lifts; and Catch in metric tons and number of crabs of *C. opilio* and *C. bairdi* separated by the area described in (b) (2) and by the area outside that described in (b) (2).

(g) Restrictions. No master or any other person in charge of any foreign vessel engaged in fishing for crabs under this subpart shall:

(1) Conduct a directed fishery for, or retain any species of crab other than snow (tanner) crabs;

(2) Process crabs except on designated factory ships;

(3) Retain and process female or soft shell crabs; any crabs not retained must be discarded immediately after the pots are taken aboard in a manner that will minimize mortality;

(4) Take aboard crabs in a manner in which the observer can not verify the total weight of crabs taken aboard.

(h) Loading zones. Loading and other support operations are permitted by foreign vessels during 1977, seaward of three nautical miles from the baseline from which the United States territorial sea is measured:

(1) Near Forrester Island, Alaska, in the waters bounded on the north by 54°-54' North Latitude, on the east by 133°16' West Longitude, and on the south 54°44' N. lat., from March 1, 1977, to December 1, 1977, inclusive.

(2) One the east side of Kayak Island, Alaska, in the waters between 58°48' North Latitude and 59°56' North Latitude west of 143°53' West Longitude and on the west side of Kayak Island in the waters between 59°52' North Latitude and 60°07' North Latitude east of 145° W. long., from March 1, 1977, to December 1, 1977, inclusive.

(3) North of Tonki Cape on Afognak Island, Alaska, in the waters bounded

on the north by 58°35' North Latitude, on the south by 58°25' North Latitude, on the west by 152°02' West Longitude and on the east by 151°52' W. long., from March 1, 1977, to December 1, 1977, inclusive.

(4) North and west of Sanak Island, Alaska, in the waters bounded on the north by 54°36' North Latitude, on the south by 54°26' North Latitude, on the west by 163°05' West Longitude and on the east by 162°40' W. long., from March 1, 1977, to December 1, 1977, inclusive.

(5) On the south side of Unalaska Island, Alaska, in the waters between 167°-18' West Longitude and 167°40' West Longitude, from March 1, 1977 to October 14, 1977 inclusive.

(6) On the north side of Unalaska Island, Alaska, in the waters between 167°15' West Longitude and 167°35' West Longitude, from March 1, 1977 to October 14, 1977 inclusive.

(7) On the south side of Umnak Island, Alaska, in the waters between 168° 15' West Longitude and 168°30' West Longitude, from October 15, 1977 to December 31, 1977 inclusive.

(8) On the north side of Umnak Island, Alaska, in the waters between 168° 25' West Longitude and 168°40' West Longitude and between 168°50' West Longitude and 169° West Longitude, from October 15, 1977 to December 31, 1977 inclusive.

(9) Off St. George Island of the Pribilof Islands, Alaska, from March 1, 1977 to April 30, 1977 and November 1, 1977 to December 31, 1977 inclusive.

(10) On the north side of St. Matthew Island, Alaska, in the waters between 172°29' West Longitude, and 172° 46' W. longitude, and on the south side of St. Matthew Island, Alaska, in the waters between 172°17' West Longitude, and 172°35' West Longitude, and in the waters between 172°54' West Longitude, and 173°04' West Longitude.

§ 611.96 Gulf of Alaska Trawl Fishery.

(a) Purpose. Regulations of this section shall apply to all species of fish taken in trawl gear during the period March 1, 1977 to December 31, 1977 in the Gulf of Alaska which includes that portion of the North Pacific Ocean, exclusive of the Bering Sea, between 132°40' N. Lat. and 170° W. longitude. Unless otherwise defined herein, all other terms used in this section will have the meanings ascribed to them in subpart A of these regulations.

(b) Catch quota. The 1977 maximum catch quotas for foreign fishermen in the Gulf of Alaska are as follows:

Species:	Catch quota (metric tons)
Pollock	149,000
Pacific ocean perch	29,000
Other rockfishes	4,000
Flounders	20,500
Sablefish	(1)
Atka mackerel	22,000
Pacific cod	2,300
Others (combination)	16,200

¹ Incidental trawl catch not to exceed 2 percent.
