RE: C2 Salmon bycatch– review (a) Chinook/chum genetics reports for BS, GOA; (b) pollock IPA reports, Sea Share; and (c) Chum salmon bycatch initial review analysis

Maybe someone with more understanding than me could explain to everyone involved, how the Trawl fleet can take 50k Kings and around 400k Chums plus 100k crab. This is all dumped over the side as bycatch dead, and we as small boat commercial fisherman in the Yukon and Bristol Bay can't have a Fisheries. I have given you my email address could someone please explain how this can continue to keep happening.
