

Region	Stock	Tier	Assmnt Frequency number of years between operational assmnts	Assessment type originally expected in 2025	Most Recent Operational Assmnt	Most recent ESP if available	Next Expected Operational assessment based on AFSC stock prioritization schedule*	Most recent Harvest Projection if newer than last operational assessment	Harvest projection proxy for catch for 2024 HPs	2025 / 2026 ABC set at maxABC?	2025 bottom trawl survey trend relative to 2023 survey estimate	Additional survey data	B <B35%?
EBS/AI/G OA	Sablefish	3	1	Full	2024	2024 Sablefish ESP Report Card	2026			No, 5% reduction	-23%	Up 4% from 2023 LLS	
GOA	Pollock	3	1	Full	2024	2024 Pollock ESP Report Card	2026			Yes	32%	Shelikof winter survey up 13% (biomass) and up 146% (abundance) from 2024	
GOA	Pacific cod	3	1	Update	2024	2024 Pcod ESP Report Card	2026			Yes	39%		B28.7 in 2025
GOA	Pacific ocean perch	3	2	Full	2023	n/a	2027	2024 HP	Projections based on an estimated catch of 23,831 t for 2024 and estimates of 31,058 t and 29,435 t used in place of maximum permissible ABC for 2025 and 2026. To estimate future catches, yield ratio updated to 0.8, which was the average ratio of catch to ABC for the last three complete catch years. This yield ratio was multiplied by the projected ABCs from the updated projection model to generate catches.	Yes	-46%	Note that the BTS biomass is about average for the time series. A single 12-ton catch inflated this point estimate for the 2023 survey biomass. This is one reason why this 46% decrease is so dramatic	
GOA	Rougheye & blackspotted rockfish	3	2	Full	2023	n/a	2027	2024 HP	To estimate future catches, yield ratio was updated from 0.42 to 0.50, which was the average ratio of catch to ABC for the last three complete catch years (2021-2023). This yield ratio was multiplied by the projected ABCs from the updated projection model to generate catches of 656 t in 2025 and 667 t in 2026.	No- used stairstep. The recommended 2025 ABC was calculated as the mean of the 2025 ABC specified in 2023 assessment and the 2025 maxABC estimated in 2024 assessment. 2026 ABC was calculated as the mean of the 2025 ABC specified in 2023 and the 2026 maxABC estimated in 2024.	-2%	No change from 2023 LLS	
GOA	Shortraker rockfish	5	2	Update	2023	n/a	2027			Yes	-21%	-16% 2023 LLS	
GOA	Skates	5	2	Update	2023	n/a	2027			Yes	8%		
GOA	Other rockfish	4, 5, 6	2	Update	2024	n/a	2027			Yes	11%		
GOA	Arrowtooth flounder	3	4	Full	2021	DRAFT 2025 ATF E	2029	2024 HP	Yield ratio updated from 0.15 to 0.11, which was the average ratio of catch to ABC for the last three complete catch years. This yield ratio was multiplied by the projected ABCs from the updated projection model to generate estimated catches of 12,770 t in 2025 and 11,278 t in 2026.	Yes	22%		
GOA	Rex sole	3	4	Full	2021	n/a	2029	2024 HP	The 2025 and 2026 projected catches were calculated as the average catch over the previous 5 years (1,108 t). These estimated catches for the present and two future years are input in place of maxABC for projections, which is appropriate given that recent catches are much less than the maximum ABC for this stock.	Yes	23%		
GOA	SWF	3	4	Full	2021	n/a	2029	2024 HP		Yes	16%

GOA- SWF	N/S rock sole	5	4	Full	2021	n/a	2029	2024 HP	Annual rock sole catch from CAS was split evenly between the two species. On average over the catch time series, 97% of rock sole catch has been from the central-eastern GOA and 3% from the western GOA. The area specific split applied to the 2021 and 2022 catch from step 1 was 98% and 2%, cegoa and wgoa respectively, and in 2023 the split was 97% and 3%. Expansion factor used for estimated 2024 catch. The 2024 preliminary catch estimates were also used for the 2025 and 2026 catch values in the projection model.	Yes	southern: up 33% northern: up 18% complex: 31%		
GOA	Atka mackerel	6	4	Update	2021	n/a	2029				16%		
GOA	Octopus	6	4	Update	2021	n/a	2029			Yes	Does not use trawl survey
