

2023/24 Stock Status Determination for Pribilof Islands Golden King Crab

Tyler Jackson
 Alaska Department of Fish and Game, tyler.jackson@alaska.gov

September 2024

Summary

The full assessment of Pribilof Islands golden king crab (AIGKC) was conducted in May 2023 (Jackson and Daly 2023). This document updates the full assessment with stock status determination for 2023 relative to completed estimates of fishing mortality and associated biological reference points. The May 2020 assessment determined the overfishing limit (OFL) 2023 to be 93 t (0.20 million lb) with an acceptable biological catch (ABC) of 70 t (0.15 million lb).

Two vessels participated in the 2023 fishery, thus retained and total fishing mortality are confidential. There was no effort in bycatch crab fisheries (snow and grooved Tanner crab) and total bycatch mortality in groundfish fisheries was 0.36 t (794 lb). **Overfishing did not occur in 2023.**

The following two tables update the management performance tables presented in the May 2023 SAFE Report with completed fishery estimates of 2023:

Table 1: Status and catch specifications (t) of Pribilof Islands golden king crab

Year	MSST	Biomass	GHL	Retained	Total	OFL	ABC
2019			59	Conf.	Conf.	93	70
2020			59	49	52	93	70
2021			59	16	21	93	70
2022			59	Conf.	Conf.	93	70
2023			59	Conf.	Conf.	93	70
2024						114	85.3
2025						114	85.3
2026						114	85.3

Table 2: Status and catch specifications (million lb) of Pribilof Islands golden king crab

Year	MSST	Biomass	TAC	Retained	Total	OFL	ABC
2019			0.13	Conf.	Conf.	0.20	0.15
2020			0.13	0.11	0.12	0.20	0.15
2021			0.13	0.03	0.05	0.20	0.15
2022			0.13	Conf.	Conf.	0.20	0.15
2023			0.13	Conf.	Conf.	0.20	0.15
2024						0.25	0.19
2025						0.25	0.19
2026						0.25	0.19
