## Plan Team summary for BSAI Tier 3 rockfish stocks

Paul Spencer, Jim lanelli, and Chris Rooper FISHERIES

## Pacific ocean perch

Change between years

|  | 2017 | 2018 Percent change |  |
| :--- | ---: | ---: | ---: |
| ABC | 43,723 | 42,509 | -2.78 |
| OFL | 53,152 | 51,675 | -2.78 |
| Total biomass | 767,767 | 749,925 | -2.32 |
| Spawning biomass | 314,489 | 305,804 | -2.76 |

Change between 2016 and 2017 projections

|  | 2016 |  | 2017 <br> projection |
| :--- | ---: | ---: | ---: |
|  | 31,411 | 31,319 | -0.29 |
| 2016 catch | 30,835 | 34,280 | 11.17 |
| 2017 catch | 30,139 | 33,324 | 10.57 |
| 2018 catch | 753,302 | 749,925 | -0.45 |
| 2018 Total biomass | 307,808 | 305,804 | -0.65 |
| 2018 Spawning biomass | 42,735 | 42,509 | -0.53 |
| 2018 ABC | 51,950 | 51,675 | -0.53 |

## Performance of catch prediction

|  | Projected from | Estimated in |  |
| ---: | :--- | :--- | :--- |
| SSB for Year | previous year | current year | Percent change |
| 2013 | 273,683 | 273,631 | 0.02 |
| 2015 | 234,426 | 234,222 | 0.09 |

## Exploitation rates by area

## Future Research Tasks

- Develop prior distribution for catchability based on field work in untrawlable grounds.
- Investigate natural mortality
- Investigate "large and problematic" retrospective pattern

## Jump in survey biomass estimates beginning in 2010 (graph from 2016 assessment)

Has sampling coverage, survey methodology, gear, etc., changed?

Has the availability to the survey has changed over time?

On the other hand, a retrospective pattern would be expected if the survey biomass increases cannot be explained by adding new cohorts to the population (and the change in biomass of existing cohorts)

## POP summary table

| Quantity | As estimated or specified last year for: |  | As estimated or recommended this year for: |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2017 | 2018 | 2018 | 2019 |
| $M$ (natural mortality rate) | 0.058 | 0.058 | 0.058 | 0.058 |
| Tier | 3 a | 3a | 3a | 3 a |
| Projected total (age 3+) biomass | 767,767 | 753,302 | 749,925 | 734,431 |
| Female spawning biomass (t) |  |  |  |  |
| Projected | 314,489 | 307,808 | 305,804 | 295,593 |

## POP area apportionments

|  | WAI | Area |  |  |
| :--- | ---: | ---: | ---: | ---: |
|  | CAI | EAI | EBS |  |
| Estimated 2016 biomass | 356,896 | 216,425 | 278,507 | 329,647 |
| (from random effects model) |  |  |  |  |
| Percentage of Biomass | $30.21 \%$ | $18.32 \%$ | $23.57 \%$ | $27.90 \%$ |

## Northern rockfish

Change between years

|  | 2017 | 2018 | Percent change |
| :--- | ---: | ---: | ---: |
| ABC | 13,264 | 12,975 | -2.18 |
| OFL | 16,242 | 15,888 | -2.18 |
| Total biomass | 248,160 | 246,160 | -0.81 |
| Spawning biomass | 107,660 | 106,486 | -1.09 |

Change between 2016 and 2017 projections

|  | 2016 <br> projection | 2017 <br> projection | Percent change |
| :--- | ---: | ---: | ---: |
| 2016 catch | 4,375 | 4,541 | 3.79 |
| 2017 catch | 5,631 | 5,000 | -11.21 |
| 2018 catch | 5,497 | 4,895 | -10.95 |
| 2018 Total Biomass | 245,693 | 246,160 | 0.19 |
| 2018 Spawning biomass | 106,184 | 106,486 | 0.28 |
| 2018 ABC | 12,947 | 12,975 | 0.22 |
| 2018 OFL | 15,854 | 15,888 | 0.21 |

## Performance of catch prediction

|  | Projected from | Estimated in |  |
| ---: | :--- | ---: | ---: |

## Exploitation rates by area

## Future research plans

- "Poor" retrospective pattern
- Size at age differs between Al subareas, but the model does not incorporate this
- Slow-growing fish may also affect aging error matrix

## Northern rockfish size at age, 2012

Examine whether different growth curves should be used for the fishery and population (most of the stock is in the western Al, but most of the catch is in the eastern and central AI)

Potential methods:
a) use weighted average when computing length at age
b) apply age-length keys by subarea

## Northern rockfish summary table

| Quantity | As estimated or specified last year for: |  | As estimated or recommended this year for: |  |

## Blackspotted/rougheye rockfish

Change between years

|  | 2017 | 2018 | Percent change |
| :--- | ---: | ---: | ---: |
| ABC | 501 | 613 | 22.36 |
| OFL | 614 | 749 | 21.99 |
| Total biomass | 35,669 | 37,453 | 5.00 |
| Spawning biomass | 7,305 | 8,208 | 12.36 |

Change between 2016 and 2017 projections

|  | 2016 |  |  |
| :--- | ---: | ---: | ---: |
| projection | projection | Percent change |  |
| 2016 catch | 155 | 158 | 1.94 |
| 2017 catch | 169 | 186 | 10.06 |
| 2018 catch | 183 | 202 | 10.38 |
| 2018 Total Biomass | 37,474 | 37,453 | -0.06 |
| 2018 Spawning biomass | 8,188 | 8,208 | 0.24 |
| 2018 ABC | 614 | 613 | -0.16 |
| 2018 OFL | 750 | 749 | -0.13 |

## Performance of catch prediction

|  | Projected from | Estimated in |  |
| ---: | :--- | :--- | ---: |

## Exploitation rates by area

## Future Research Tasks

- Re-evaluate inclusion of EBS slope data
- Separate EBS and AI models
- BSAI model, with re-evaluation of "which aspects of adding the EBS . . . are most influencing the model results"
- Investigate "very large" retrospective pattern
- Incorporate uncertainty from assessment model into stock projections.

## Current stock projection based on uncertain year class

## strength

The stock projections are based on cohorts with uncertain recruitment estimates.

Incorporating the uncertainty in numbers at age would be useful in producing a distribution of the projected ABC values.

## Blackspotted/rougheye summary table

| Quantity | As estimated or specified last year for: |  | As estimated or recommended this year for: |  |
