

GOA Shark Assessments

Cindy Tribuzio, Pete Hulson, Katy
Echave, Cara Rodgveller
Auke Bay Laboratories, AFSC

GOA Sharks

- Executive Summary Only
- New for 2014:
 - Updated catch data for 2013 and 2014 (as of Oct 1, 2014)

ABC, OFL and Tier

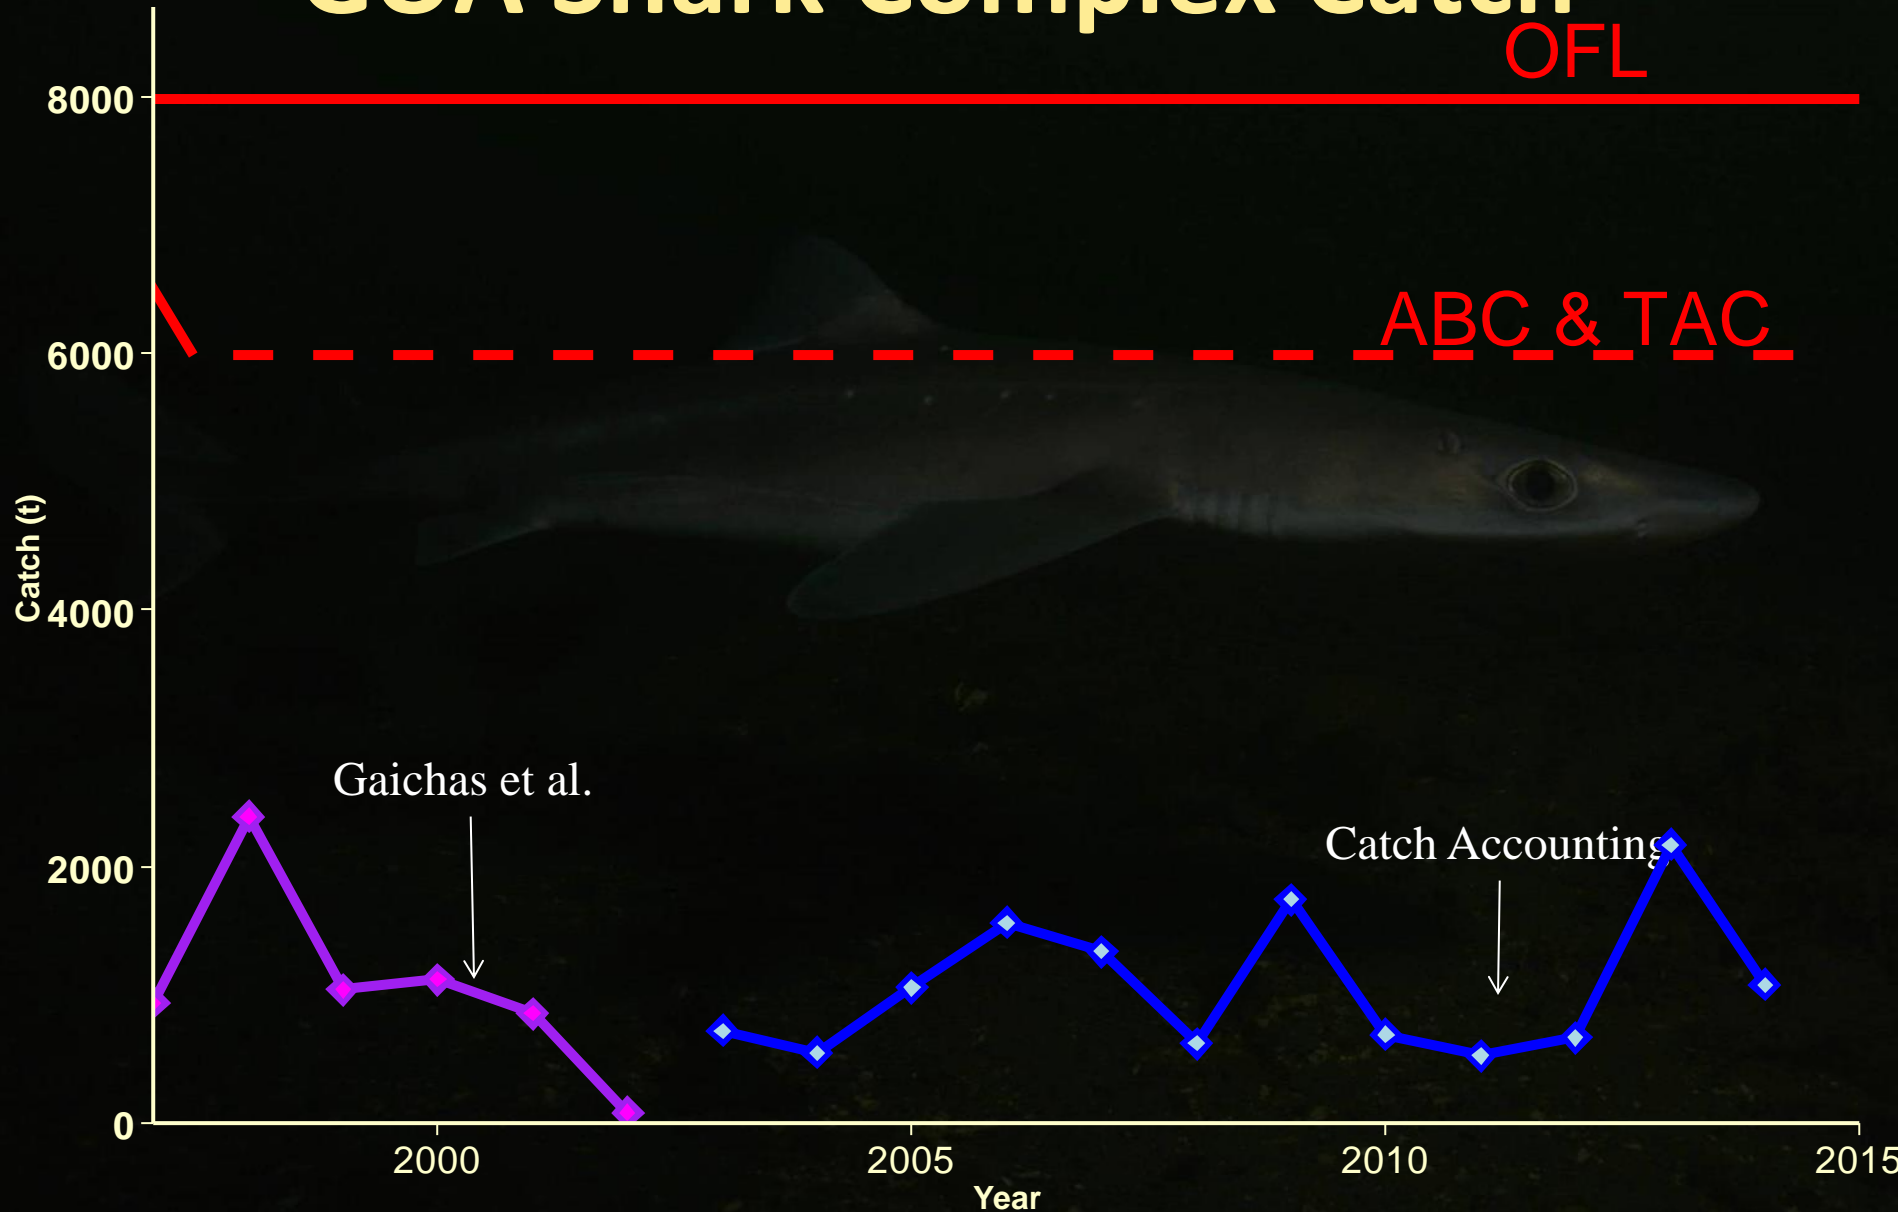

- ABC/OFL set for complex as a whole as sum of:
 - Tier 6* (biomass average) – Spiny dogfish
 - Tier 6 (average catch history) – all other shark species

Shark Complex 2014 and 2015 recommendations

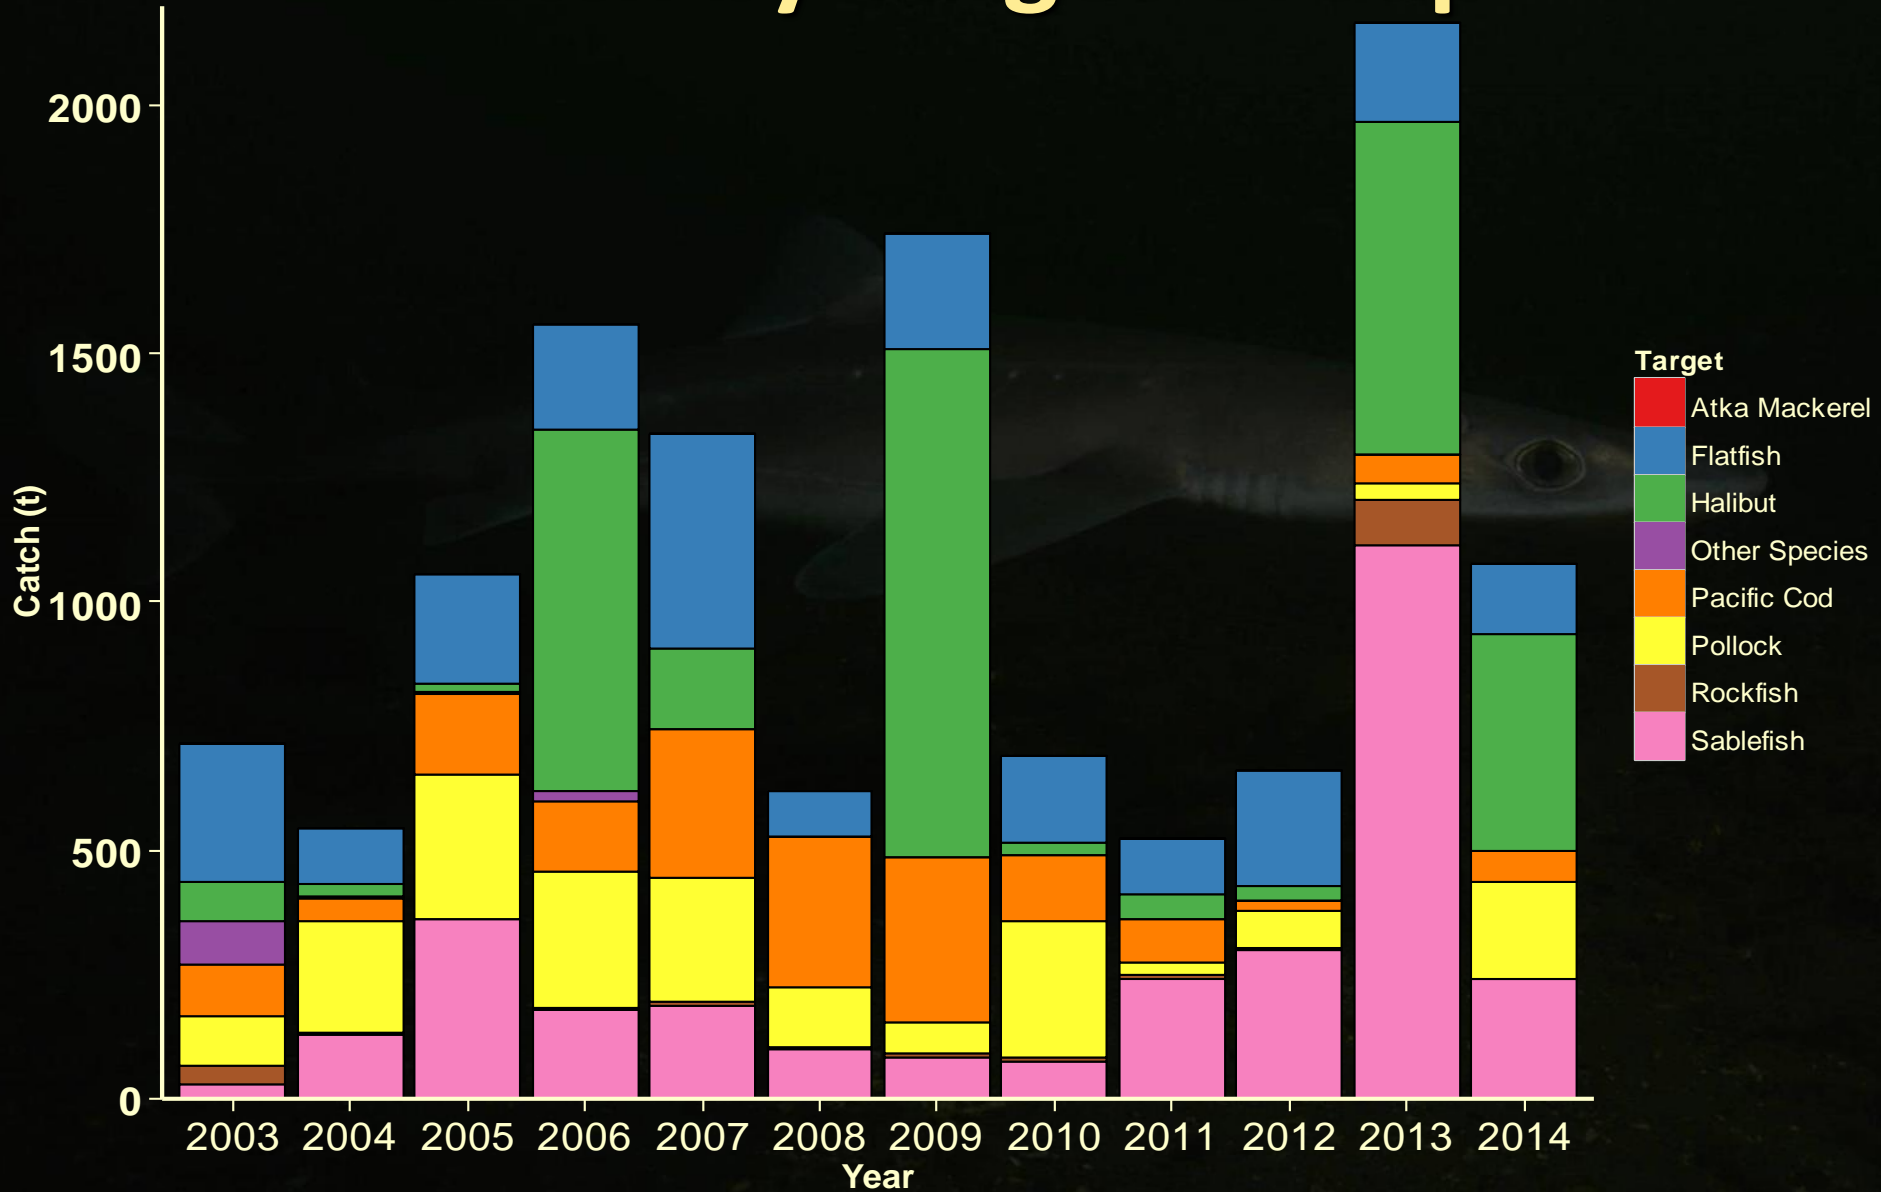

© Scot Anderson

	Spiny Dogfish	Pacific Sleeper Shark	Salmon Shark	Other/Unid Sharks	Total Sharks
Tier	6*	6	6	6	
M	0.097	UNK	0.18	UNK	
Biomass 3 YR AVG	76,452	NA	NA	NA	
Average Catch	NA	312	71	188	
ABC	5,562	234	53	141	5,989
OFL	7,416	312	71	188	7,986

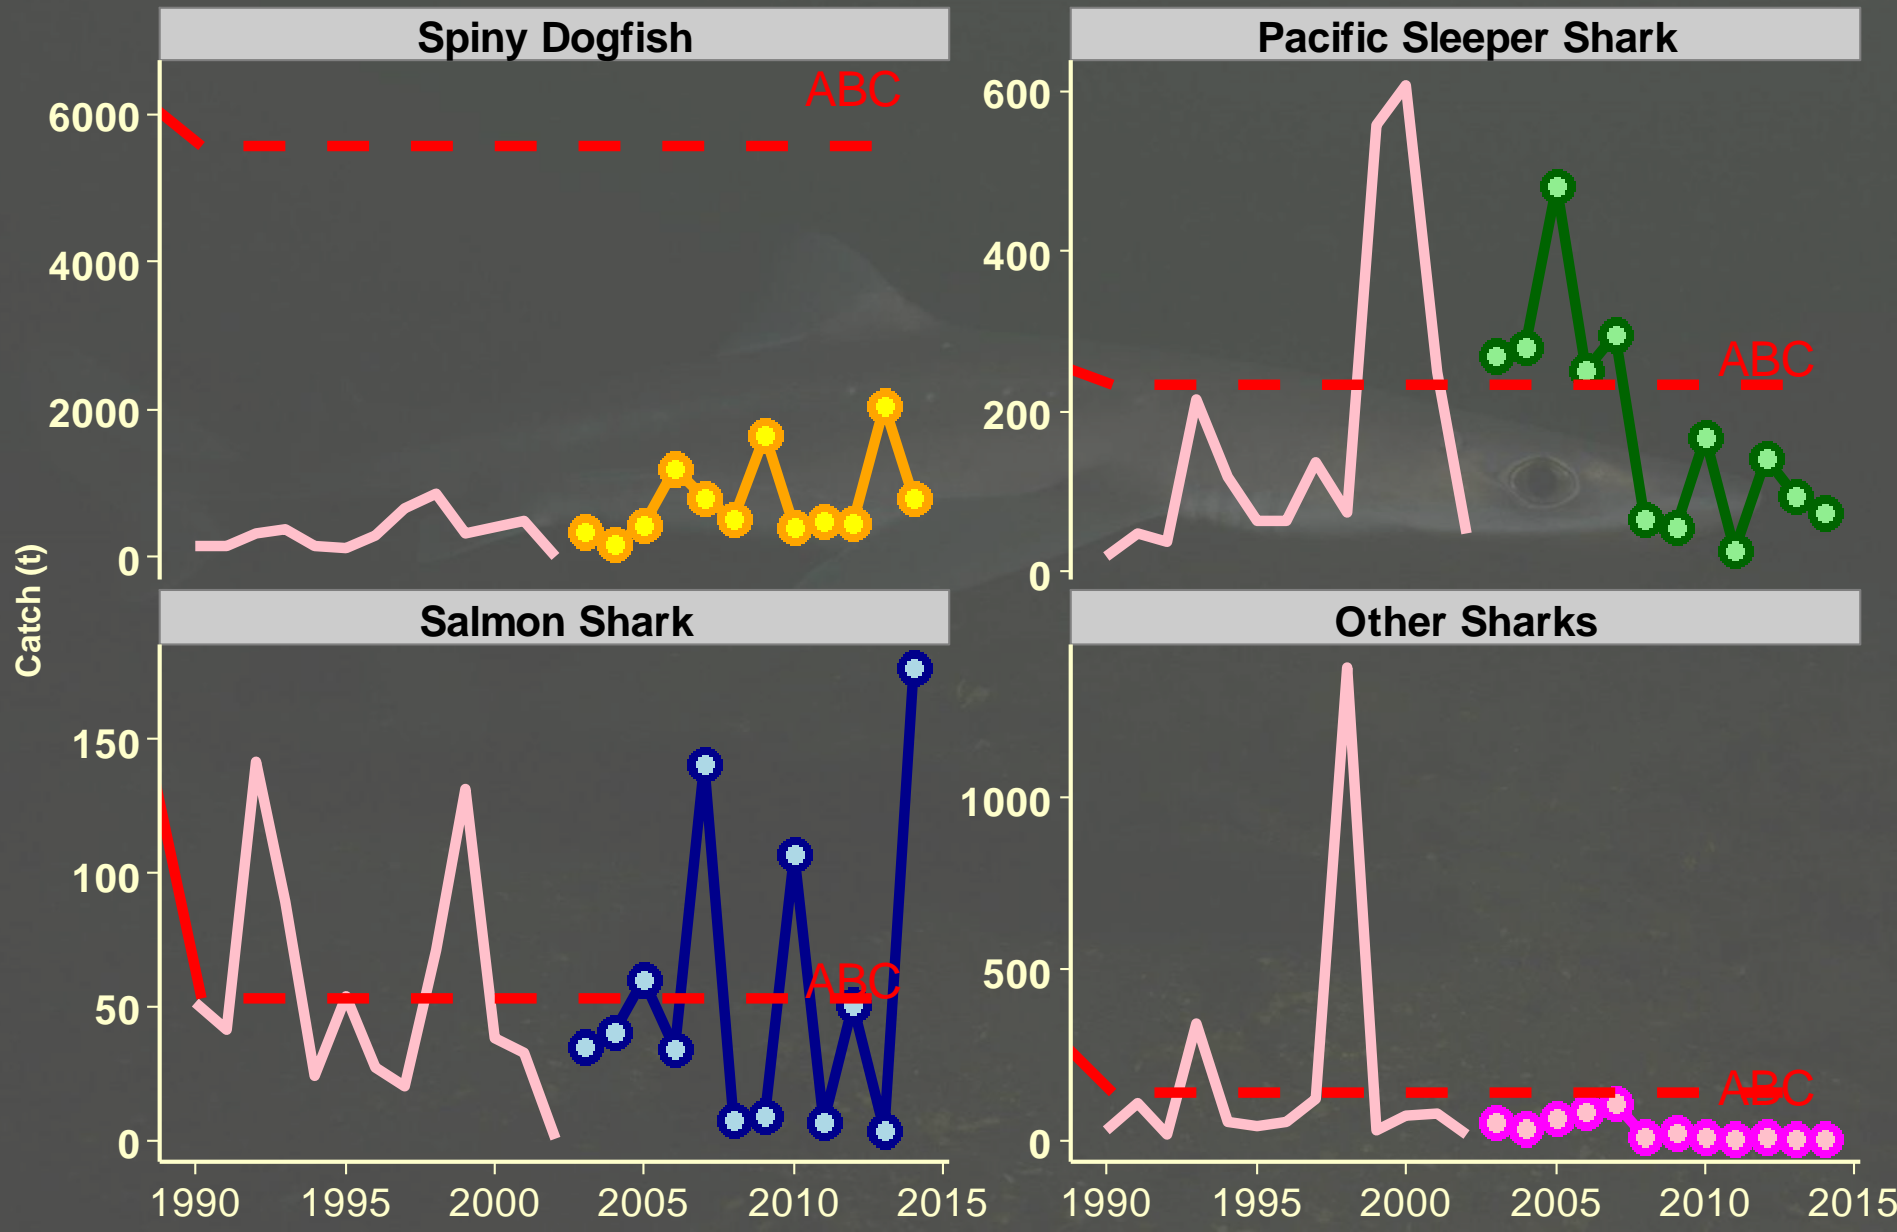

GOA Shark Complex Catch

Catch by Target Group

Species Specific Catch

Responses to SSC Comments

- Major comments (paraphrased):
 - Investigate methods for calculating biomass to move spiny dogfish to Tier 5
 - *We are working on this for the next full assessment*
 - Consider issues with catch in areas 649/659 and OBS restructuring
 - *Discussed in appendix document presented in Sept. PT recommended including a table of 649/659 catch and inside waters survey info. In next full assessment.*

Responses to PT Comments

- Major comments (paraphrased):
 - Compare HFICE catch estimates to new catch time series
 - *HFICE is not recommended due to issues with potential for double counting*
 - *A comparison between the two can be conducted, but more data is necessary, not available for a few years.*
 - Look into feasibility of using discard mortality
 - *Literature review is underway, but little information exists for discard mortality of sharks on LL gear*

Research and Future Directions

A large shark, likely a Pacific Sleeper Shark, is shown swimming in the water. The shark is viewed from above, showing its dorsal fin and the top of its body. The water is a deep blue color.

- Spiny Dogfish

- Biomass model, Ageing, Migration, Catchability

- Pacific Sleeper Shark

- Ageing, Maturity, genetics
