

C3 AREA 4 VESSEL USE CAPS

ANNA HENRY

COUNCIL MEETING APRIL 2024

VESSEL CAPS

Vessel limitations 50 CFR § 679.42(h)(1)

(1) **Halibut.** No vessel may be used, during any fishing year, to harvest more IFQ halibut than one-half percent of the combined total catch limits of halibut for IFQ regulatory areas 2C, 3A, 3B, 4A, 4B, 4C, 4D, and 4E, except that:

(i) In IFQ regulatory area 2C, no vessel may be used to harvest more than 1 percent of the halibut catch limit for this area.

(ii) No vessel may be used, during any fishing year, to harvest more than 50,000 lb (22.7 mt) of IFQ halibut derived from QS held by a CQE, and no vessel used to harvest IFQ halibut derived from QS held by a CQE may be used to harvest more IFQ halibut than the vessel use caps specified in paragraphs (h)(1) introductory text and (h)(1)(i) of this section.

VESSEL CAPS

- Limit the overall harvest on a single vessel
- To prevent large amounts of IFQ from being fished on only a few vessels.
- To protect small producers, part-time and entry-level participants who may otherwise be eliminated from the fisheries because of potential excessive consolidation of harvesting privileges under the IFQ program
- Exception if an individual IFQ holder receives IFQ allocation in excess of the vessel cap they may harvest their allocation on one vessel

Vessel IFQ Caps

2024

	Vessel Use Cap %	Annual IFQ TAC	Vessel Use Cap
Halibut	1% OF 2C HALIBUT IFQ TAC	3,500,000 net pounds	35,000 net pounds
	.5% OF ALL HALIBUT IFQ TAC	17,296,000 net pounds	86,480 net pounds

RECENT VESSEL CAP ACTIONS

- Detailed in section 1.2.1
- Vessel caps removed in Areas 4B, 4C, 4D in 2020
- Vessel caps removed in Areas 4A, 4B, 4C, 4D in 2021-2027 (or until this action implemented)

- Rationale 2020-22: Impacts on harvesters, processors, and communities as a result of travel restrictions, health mandates, and operational challenges directly attributable to the global pandemic.
- Rationale 2023: To provide continued flexibility to IFQ participants in IPHC Area 4 while the Council analyzes options for a long-term adjustment to the vessel use caps. In recent years, utilization of halibut quota in Area 4 has declined and conditions including limited local markets, increases in operating costs, and reductions from historical TACs have all contributed to fewer vessels participating in the Area 4 fisheries.

PURPOSE AND NEED

In recent years, utilization of halibut quota in Area 4 has declined and conditions including lack of processing capacity, COVID-19 concerns in communities with limited medical infrastructure, increased killer whale predation, increases in operating costs, and reductions from historical TACs have all contributed to fewer vessels participating in the Area 4 fisheries. The council is considering adjusting the vessel cap for Area 4 halibut to recognize these conditions and increase utilization of quota in the region.

ALTERNATIVES

Alternative 1- No Action

Vessel use caps would remain removed in Area 4 through the 2027 IFQ season. They would go back into effect beginning in the 2028 IFQ fishing season as 0.5% of the combined total catch limits of halibut for IFQ regulatory areas 2C, 3A, 3B, 4A, 4B, 4C, 4D, and 4E.

Alternative 2- create a halibut vessel cap for Area 4 of:

Option 1a- 4% of the Area 4 halibut TAC

b- 5% of the Area 4 halibut TAC

c- 6% of the Area 4 halibut TAC

Option 2- 150% of the coastwide halibut vessel cap (.75% combined TAC)

Sub-options (can apply to either option):

1- Specify that halibut IFQ held by an Area 4B CQE does not accrue towards the Area 4 vessel cap.

2- This action will be reviewed (a. three or b. five) years after implementation or this action will be included in the next halibut/sablefish IFQ Program Review

ALTERNATIVES

Table 3 Potential vessel cap calculations based on 2023 catch limits

2023 Catch Limit (TAC)		Vessel Cap in Area 4					
Total	Area 4	Alternative 1		Alternative 2			
		through 2027 No cap in Area 4	2028 onward 0.5% of Total TAC	option 1a 4% of Area 4 TAC	option 1b 5% of Area 4 TAC	option 1c 6% of Area 4 TAC	option 2 150% of coastwide vessel cap
17,806,000	3,466,000	NA	89,030	138,640	173,300	207,960	133,545
Calculations based on 2024 catch limits (not in RIR)							
17,296,000	3,256,000	NA	86,480	130,240	162,800	195,360	129,720

- Alt 1 (Pre 2020 and 2028 on)- Coastwide vessel cap limits the total coastwide harvest by a vessel regardless of where it was caught.

Alt 1 (Pre 2020 and 2028 on)

- Alt 1 (Pre 2020 and 2028 on)- Coastwide vessel cap limits the total coastwide harvest by a vessel regardless of where it was caught.
 - Smaller limit in 2C

Alt 1 (Pre 2020 and 2028 on)

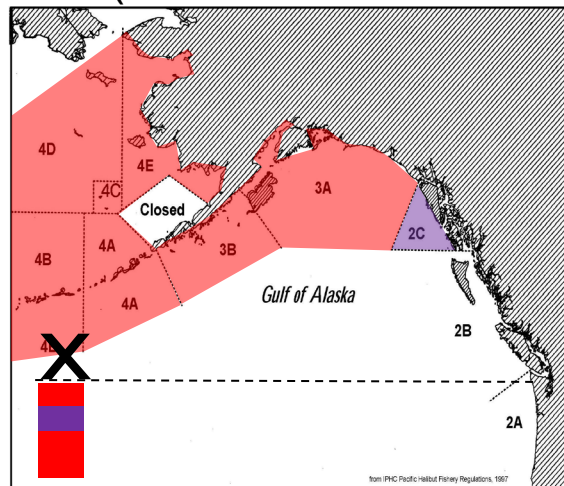

- Alt 1 (Pre 2020 and 2028 on)- **Coastwide vessel cap limits the total coastwide harvest by a vessel regardless of where it was caught.**
 - **Smaller limit in 2C**
 - Catch in 2C counts toward the Coastwide cap

Alt 1 (Pre 2020 and 2028 on)

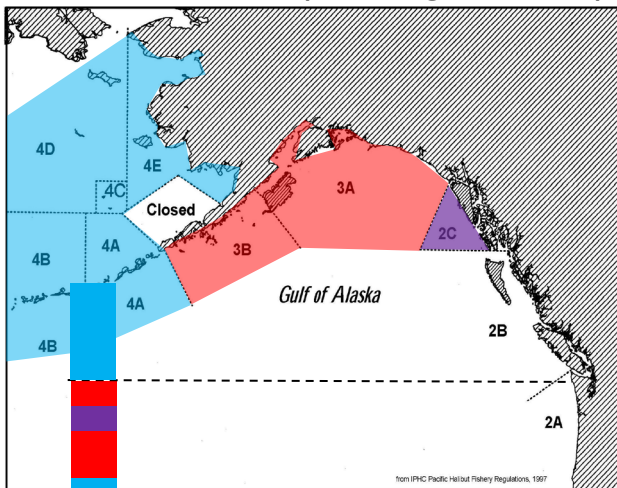

- Alt 1 (Pre 2020 and 2028 on)- **Coastwide vessel cap limits the total coastwide harvest by a vessel regardless of where it was caught.**
 - **Smaller limit in 2C**
 - Catch in 2C counts toward the Coastwide cap
 - Catch in other areas does not count toward lower 2C limit. Different than description in analysis where catch in other areas counts toward 2C limit

Alt 1 (Pre 2020 and 2028 on)

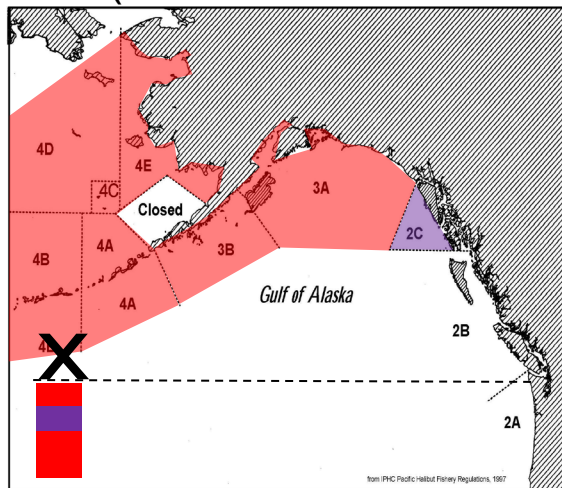

- Alt 1 (Pre 2020 and 2028 on)- **Coastwide vessel cap limits the total coastwide harvest by a vessel (regardless of where it was caught).**
 - **Smaller limit in 2C**
 - Catch in 2C counts toward the Coastwide cap
 - Catch in other areas does not count toward lower 2C limit. Different than description in analysis where catch in other areas counts toward 2C limit
- Alternative 1 (through 2027)- **Temporary exemptions in Area 4**, no vessel cap in Area 4 and catch in Area 4 does not accrue towards coastwide cap

Alternative 1 (through 2027)

Alt 1 (Pre 2020 and 2028 on)

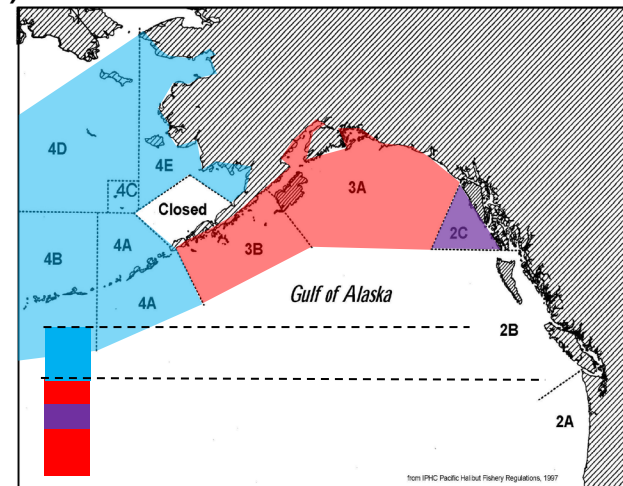

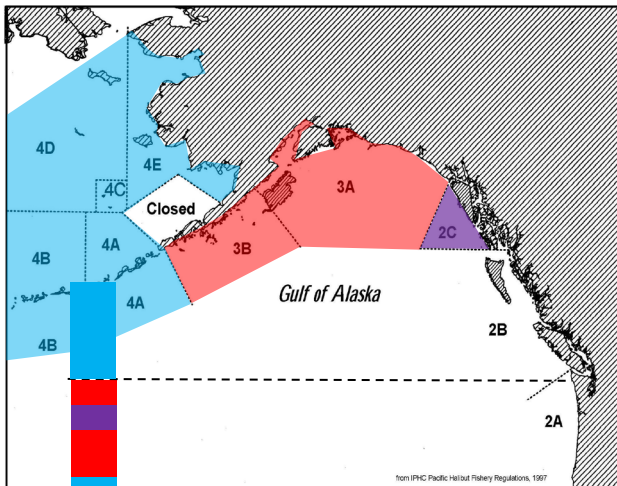

- Alt 1 (Pre 2020 and 2028 on)- **Coastwide vessel cap limits the total coastwide harvest by a vessel (regardless of where it was caught).**
 - **Smaller limit in 2C**
 - Catch in 2C counts toward the Coastwide cap
 - Catch in **other areas** does not count toward lower **2C limit**. Different than description in analysis where catch in other areas counts toward 2C limit
- Alternative 1 (through 2027)- **Temporary exemptions in Area 4**, no vessel cap in Area 4 and catch in Area 4 does not accrue towards coastwide cap
- Alternative 2- **Different (larger) limit in Area 4**

Alternative 1 (through 2027)

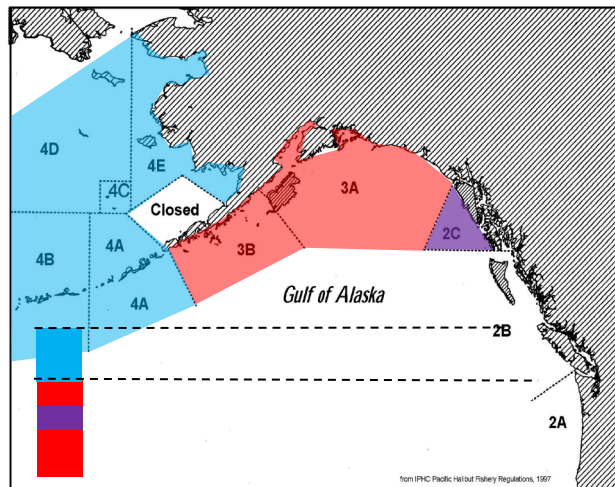

Alt 1 (Pre 2020 and 2028 on)

Alternative 2

Clarification and Assumptions

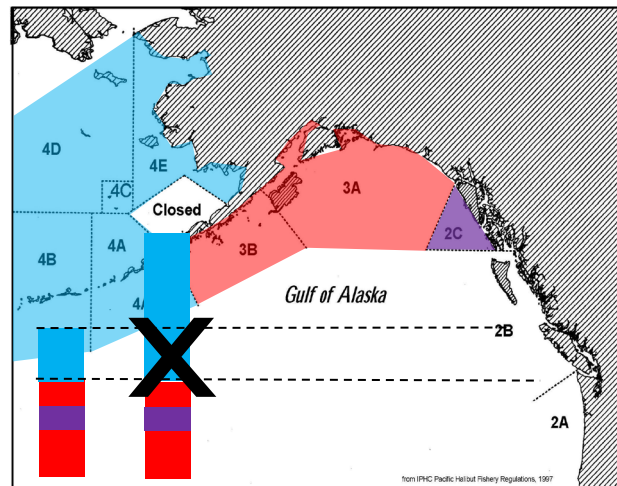

Alternative 2

Clarification and Assumptions

- Area caps are not additive

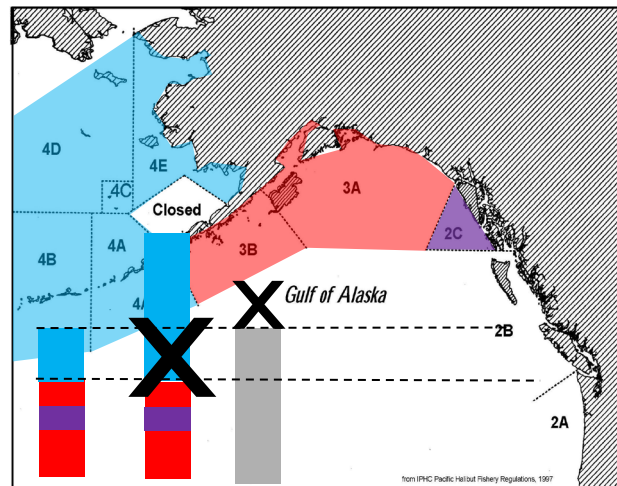

Alternative 2

Clarification and Assumptions

- Area caps are not additive
- The overall catch from any single vessel could not be greater than the largest area cap

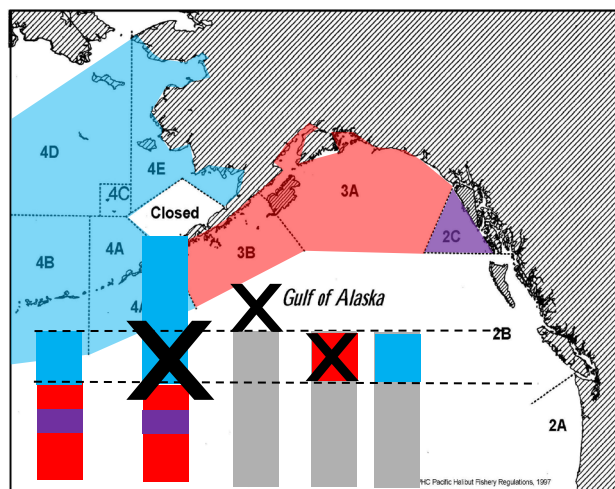

Alternative 2

Clarification and Assumptions

- Area caps are not additive
- The overall catch from any single vessel could not be greater than the largest area cap
- **To operate in an area, a vessel's overall annual catch to date must be less than that area's cap**

Alternative 2

Clarification and Assumptions

- Area caps are not additive
- The overall catch from any single vessel could not be greater than the largest area cap
- To operate in an area, a vessel's overall annual catch to date must be less than that area's cap
- **A vessel's total harvest applies to the cap in each area it operates, regardless of where the harvest was caught. Therefore Area 4 harvests would count towards the Area 4 specific cap as well as caps in other areas.**
- **May affect the order of areas in which a vessel can harvest catch.**
 - Consistent with regulatory definition of vessel caps
 - Can result in different overall limits for a vessel based on the order of areas in which they fish.

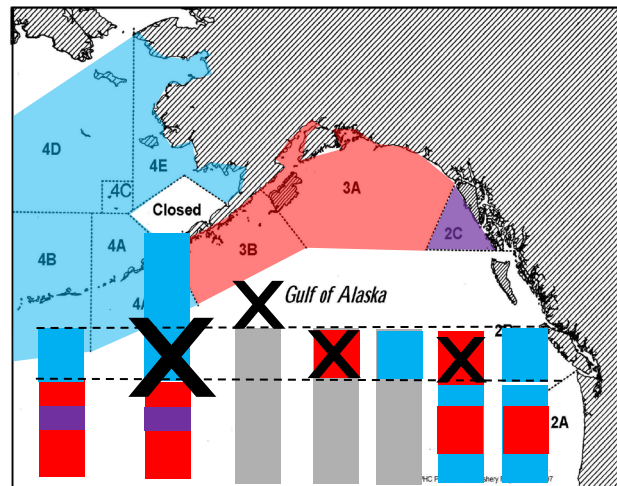

Alternative 2

Clarification and Assumptions

- Area caps are not additive
- The overall catch from any single vessel could not be greater than the largest area cap
- To operate in an area, a vessel's overall annual catch to date must be less than that area's cap
- A vessel's total harvest applies to the cap in each area it operates, regardless of where the harvest was caught. Therefore Area 4 harvests would count towards the Area 4 specific cap as well as caps in other areas.
- May affect the order of areas in which a vessel can harvest catch.
 - Consistent with regulatory definition of vessel caps
 - Can result in different overall limits for a vessel based on the order of areas in which they fish.
- **It may be more straightforward to treat limits as additive or only applicable to area harvest however this could result in effectively larger limits and has not been analyzed.**

Alternative 2

COUNCIL CLARIFICATIONS

- Area 4 includes Areas 4A, 4B, 4C, 4D **and 4E**
- Under Alternative 2, sub-option 1, IFQ halibut derived from QS held by a CQE in area 4B would not accrue towards the Area 4 vessel cap.
 - Analysts assume that IFQ halibut derived from QS held by a CQE in area 4B would still accrue towards the vessel cap in other areas. Therefore, a vessel that has harvested CQE in area 4B could harvest additional IFQ in Area 4, up to the Area 4 cap. However, that vessel must have headroom under other area caps (including the Area 4B CQE harvests) to harvest IFQ in other areas.

OTHER IFQ RESTRICTIONS

- The proposed action would not modify other aspects of the IFQ program
- Other restrictions intended to prevent excessive consolidation of harvesting privileges and maintain the diversity of the IFQ fleets are unchanged

Transfer restrictions

- Transfers, or leasing, of CV IFQ has generally been prohibited except under a few specific conditions.
- NMFS promulgated emergency rules to allow the temporary transfer of halibut and sablefish IFQ for all QS holders for the 2020 and 2021 fishing seasons.

Vessel class

- Harvesting vessel size is limited by quota class category
- “Fish up” (landing of IFQ derived from smaller class QS on larger class vessels) and “fish down” (landing of IFQ derived from larger class QS on smaller class vessels) provisions in area 4 mean these limitations are less constraining

Quota use caps

- Use caps limit the amount of QS that can be held or used by an individual
- Harvesting 100 percent of the TAC will require numerous individuals to hold QS

VESSEL CAPS

Table 8 Annual catch limits and vessel use caps for halibut, 2013-2024 (net pounds)

Year	All Areas		Area 2C	
	Total Catch Limit (lbs)	Vessel Cap (lbs)	Area 2C Catch Limit (lbs)	Vessel use cap (lbs)

Figure 10 Pounds of IFQ halibut landed per trip by IFQ Area 2017-2022

POTENTIAL IMPACTS

	Alternative 1	Alternative 2
Prior to 2028	Less Restrictive More Flexibility	More Restrictive Less Flexibility
2028 and after	More Restrictive Less Flexibility	Less Restrictive More Flexibility

POTENTIAL IMPACTS

	Alternative 1	Alternative 2
Prior to 2028	Less Restrictive More Flexibility	More Restrictive Less Flexibility
2028 and after	More Restrictive Less Flexibility	Less Restrictive More Flexibility

- Because the implementation timing of this action is unknown, when comparing impacts of these alternatives, the analysis focuses on those that would occur from 2028 on. After the current vessel cap removal has expired and Alternative 1 represents a vessel cap that is more restrictive in Area 4 than those proposed under Alternative 2.

POTENTIAL IMPACTS

- The specific limit in pounds of each vessel cap in any given year will depend on the annual Area IFQ TACs.

Alt 1= 0.5% of coastwide TAC (2C, 3A, 3B, 4A, 4B, 4C, 4D, and 4E)

Alt 2.1a=4% Area 4 TAC
 Alt 2.1b=5% Area 4 TAC
 Alt 2.1c=6% Area 4 TAC

Alt 2.2=150% coastwide cap (0.75% combined TAC)

Figure 12 Back-calculated vessel cap lbs by Alternative and option 2013-2023

Alt 1= 0.5% of coastwide TAC (2C, 3A, 3B, 4A, 4B, 4C, 4D, and 4E)

Alt 2.1a=4% Area 4 TAC
 Alt 2.1b=5% Area 4 TAC
 Alt 2.1c=6% Area 4 TAC

Alt 2.2=150% coastwide cap (0.75% combined TAC)

Fig 13-14 p. 48

Table 27 Number of vessels harvesting IFQ in Area 4A, 4B, 4CD, and minimum number required to harvest all of each Area TAC under potential vessel caps

Area	Year	No. of vessels harvesting IFQ	Minimum no. of vessels to harvest 100% of TAC with cap				
			Alt 1	Alt 2.1a	Alt 2.1b	Alt 2.1c	Alt 2.2
4A	2015	68	17	12	10	8	11
	2016	69	17	11	9	8	11
	2017	65	16	11	9	8	11
	2018	67	17	12	9	8	11

	2021*	19	11	7	6	5	8
	2022*	16	11	7	6	5	7
	2023*		11	8	6	5	8
4C/D	2015	38	9	6	5	4	6
	2016	36	11	7	6	5	7
	2017	38	10	8	6	5	7
	2018	38	11	8	6	5	8
	2019	42	13	8	6	5	9
	2020*	33	12	8	6	5	8
	2021*	27	10	7	6	5	7
	2022*	20	11	8	6	5	8
	2023*		13	8	7	6	9

POTENTIAL IMPACTS

Table 28 Number of vessels that would have been over the proposed cap in Area 4A, 4B and 4CD in years the vessel cap was removed

Area	Year	Alt 1	Alt 2.1a	Alt 2.1b	Alt 2.1c	Alt 2.2
4A	2021	15	2	1	0	2
4A	2022	13	2	0	0	2
4B	2020	11	3	0	0	4
4B	2021	9	2	2	0	2
4B	2022	7	2	0	0	3
4CD	2020	10	2	0	0	4
4CD	2021	10	2	1	0	2
4CD	2022	9	3	0	0	4

- The number of vessels with total harvest greater than what the proposed caps would have been under each alternative

POTENTIAL IMPACTS

- Changing regulatory environment makes it difficult to predict likely impacts
- What would have occurred without the recent harvest flexibility? (temporary transfer flexibility and the exemption from the vessel use cap in Area 4)
- Challenging to isolate the evidence of the impacts of vessel caps from the impacts of other management, environmental, and market factors in the fisheries
- Participation and harvest patterns in 2020-2022 do not clearly identify the direct impact of an Area 4 vessel use cap exemption because of other factors which may have influenced participation decisions.
- Extent to which these trends are due to limited vessel and processor capacity and other underlying conditions or the increased flexibility from the temporary removal of regulatory restrictions in recent years is unknown.

POTENTIAL IMPACTS

Alternative 1-No Action

- Alternative 1 provides the most flexibility for vessels in Area 4 in the near term (through 2027) and the least amount of flexibility overall in the long term (2028 and beyond) as it represents the lowest limit of the proposed Alternatives and options.
- Most Restrictive Cap could Limit IFQ consolidation on vessels
 - Maintains a larger minimum number of vessels to prosecute the fishery and may preserve opportunities for smaller operations, crew and new entrants
 - Due to potential changes in the fishery after four years of exemptions from vessel caps and other underlying conditions, vessel use caps may not ensure additional opportunity for vessels and crew, particularly in remote Area 4 halibut IFQ fisheries.
- May limit opportunities for efficiency and increase the likelihood that annual allocation is left unharvested if the supply of vessels is low enough that the entire allocation cannot be spread out amongst participating vessels while meeting lowest vessel caps
 - Depends on how many vessels do not operate because individual operators cannot justify the costs to operate a vessel given increases in costs or other changes in profitability and processing capacity

POTENTIAL IMPACTS

Alternative 2-

- The specific impacts of Alternative 2 depend on the option selected, future TACs and subsequent vessel caps.
- Generally, larger vessel caps provide increased flexibility to vessels that operate in Area 4 which may be particularly useful given recent decline in TAC utilization and number of communities processing IFQ in Area 4
- Unclear if increasing the vessel caps will increase TAC utilization as even with the removal of vessel caps TAC utilization rates in Area 4 decreased in recent years, however larger vessel caps are likely to increase utilization rates relative to more constraining caps.
- Implementing different vessel caps in different areas may increase the complexity of operations as operators will have to plan and track their vessel harvest patterns to efficiently harvest the most IFQ possible while not going over limits in more constraining areas.
- Allowing larger caps in Area 4 may lead to friction with users in other areas who will be required to operate under the same vessel caps as status quo in an environment of declining TACs

POTENTIAL IMPACTS

Alternative 2 sub-option 1

- If sub-option 1 is selected, IFQ halibut derived from QS held by a CQE in area 4B would not accrue towards the Area 4 vessel cap, however the 50,000lb vessel cap for CQEs would still apply (in 2028 and beyond when the vessel caps go back into effect).
- Sub-option 1 will provide more flexibility to vessels harvesting IFQ in Area 4 that may also want to harvest Area 4B CQE, which may increase the pool of vessels available to harvest Area 4B CQE.
- However, it will not provide any additional flexibility to the CQE in Area 4B in terms of the number of vessels required to harvest their total QS holdings. This sub-option is applicable only to the CQE in 4B, thus QS held by CQEs in other IFQ Areas (the Gulf of Alaska) continue to count toward all vessel caps.

POTENTIAL IMPACTS

Alternative 2 sub-option 2

- Under sub-option 2, the Council can identify a timeline for review of this action of either three or five years after implementation or specify that this action be included in the next halibut/sablefish IFQ Program Review.
- Selecting a specified review timeline may help alleviate concerns from some stakeholders regarding what may be perceived as a permanent change to a fundamental aspect of the IFQ Program.
- It is likely that any future IFQ Program review would include an analysis of the impacts of vessel limitations.
- Requiring review at a specific date allocates staff resources to that review regardless of Council priorities at that time.
- Regardless of whether or not the Council selects this sub-option, the Council could choose to review the outcome of this action at any time during a regularly scheduled meeting.

MANAGEMENT AND ENFORCEMENT

- Vessel use caps are enforced at the point of landing.
- Vessels must have enough available IFQ in the area in which they are fishing so Alternative 2 may impact the order in which vessels harvest different IFQ Areas.
- Management and enforcement of vessel caps would become more complex under Alternative 2 because it would require tracking separate limits for separate areas.
- Permanently modifying the landings programming would require NMFS developers approximately four weeks of dedicated time to determine the business requirements, modify existing (antiquated) code, and implement the changes to ensure participants could land IFQ without reporting errors.
- Sub-option 1 may require additional complexity in enforcement, however RAM already tracks CQE landings separately, given different vessel limitation for IFQ and CQE.
- Any action to modify the IFQ Program recommended by the Council would be subject to cost recovery under the MSA

IFQ COMMITTEE REPORT

- The IFQ Committee met online, March 28, 2024, to provide recommendations on the Area 4 Vessel Cap analysis for Initial Review.
