**National Oceanic and Atmospheric Administration**  
National Marine Fisheries Service  
Alaska Fisheries Science Center  
7600 Sand Point Way N.E.  
Seattle, WA 98115-6349

Simon Kinneen, Chair  
North Pacific Fishery Management Council  
1007 W. 3rd Avenue  
Anchorage, AK 99501  
2022

September 12,

Dear Mr. Kinneen,

I am pleased to nominate Dr. Cecilia O'Leary for the Gulf of Alaska (GOA) Groundfish Plan Team (GPT). Cecilia has exceptionally strong quantitative skills and knowledge of stock assessments. The breadth of her experience from hands-on data collection and past stock assessment work ensures that she will be a valuable asset to the Plan Team.

Dr. O'Leary is a Research Fish Biologist in the GOA/Aleutian Islands survey group of the Groundfish Assessment Program (GAP) at Alaska Fisheries Science Center. She joined GAP as a JISAO postdoc in February 2019 and worked with Drs. Jerry Hoff, James Thorson, Stan Kotwicki, and Andre Punt with a focus on developing indices of abundance from bottom trawl surveys and quantifying total uncertainty around those estimates. Her recent work has focused on fish population dynamics, developing abundance indices for untrawlable fish habitat in the Gulf of Alaska, and using spatiotemporal modeling tools and fisheries independent survey data to estimate of groundfish distribution and abundance.

During her tenure with GAP, Dr. O'Leary has become increasingly familiar with fishery-independent Alaska groundfish surveys designs, data products, and their utility for stock assessments and management advice. She has practical experience as well, having just finished a tour of duty on the Aleutian Islands 2022 summer bottom trawl survey as a Field Party Chief running daily fishing operations and catch processing. In 2021, she was Deck Lead on the GOA bottom trawl survey responsible for catch processing and data quality.

Dr. O'Leary's recent (2022) paper, Understanding transboundary stocks' availability by combining multiple fisheries-independent surveys and oceanographic conditions in spatiotemporal models, was selected as the Editor's Choice in the ICES Journal of Marine Science. She also leads our team who produce spatiotemporal biomass estimates from VAST for the GOA and has a strong coding background in R, R Shiny, operating in the GitHub environment, and using ADMB/TMB and Python.

Prior to her tenure in GAP, Dr. O'Leary focused her PhD research under Dr. Janet Nye at Stony Brook University on fish population dynamics including estimating productivity, natural and fishing mortality, and identifying the environmental factors influential on those processes. She

also created a temporal model to incorporate climate data into age-structured hierarchical statistical models to estimate age-specific fish abundances in the Northwest Atlantic.

Dr. O'Leary's experience collecting fishery-independent data and using them to assess groundfish populations and support stock assessments make her an excellent candidate for the GOA GPT. Her proven expertise in understanding relationships between fish, habitat, and climate are important skills as well.

We appreciate the opportunity to provide scientists in support of the NPFMC plan teams.

Sincerely,

A handwritten signature in black ink, appearing to read 'R. Foy', with a long horizontal flourish extending to the right.

Robert Foy  
Director

# Dr. Cecilia O'Leary

## Quantitative Ecologist & Fisheries Biologist

### EDUCATION

#### PhD / Marine & Atmospheric Sciences

*Stony Brook University, NY, USA*

2013 – 2018

GPA 3.96

**Dissertation:** Statistical Approaches to Determine the Influence of Climate and Fishing on Flatfish Abundances

**Relevant Coursework:** Total Weekly Hours (26)

Biological Oceanography (3 hours), Biogeochemical Oceanography (3 hours), Physical Oceanography (3 hours), Quantitative Fisheries Ecology (including principles of fishery population dynamics, 3 hours), Biometry (statistics, 4 hours), Bayesian Data Analysis (statistics, 3 hours), Ecology of Fishes (including physiology and ichthyology and principles of fishery population dynamics; 3 hours), Population and Community Ecology Seminar (2 hours), Advanced Environmental Statistics (2 hours)

#### Master's of Research / Marine Mammal Science

*University of St. Andrews, Scotland, UK*

2010 – 2011

GPA 3.67

**Dissertation:** The Social Structure of Chilean dolphins (*Cephalorhynchus eutropia*) and its application to coastal management

**Relevant Coursework:** Total Weekly Hours (75)

Population Biology of Marine Mammals (15 hours), Essential Methods in Marine Mammal Science I (10 hours), Essential Methods in Marine Mammal Science II (20 hours), Biology of Marine Mammals (zoology, 10 hours), Statistical Modelling (20 hours)

#### Bachelor of Science / Biology

*University of Richmond, VA, USA*

2010 – 2011

GPA 3.22

**Relevant Coursework:** Total Weekly Hours (55)

Advanced Ecology (4 hours), Environmental Chemistry (3 hours), Inorganic Chemistry (3 hours), General Physics with Calculus I (mathematics, 4 hours), General Physics with Calculus II (mathematics, 3 hours), Tropical Marine Biology (4 hours), Behavioral Ecology (4 hours), Invertebrate Zoology (4 hours), Biogenetics (4 hours), Scientific Calculus I (mathematics, 3 hours), Scientific Calculus II (mathematics, 3 hours), Cell and Molecular Biology (4 hours), Integrative Biology I (including genetic, cellular, and morphological processes in animals/plants; 4 hours), Integrative Biology II (including genetic, cellular, and morphological processes in animals/plants; 4 hours), Organic Chemistry (4 hours)

Advanced First Aid / 2019  
NOAA / Seattle WA

Wilderness First Responder / 2017  
Discover Outdoors / NYC NY

## COMPUTATIONAL & FIELDWORK EXPERIENCE

### **Fisheries Research Biologist**

*Groundfish Assessment Program, RACE  
Alaska Fisheries Science Center  
Seattle WA*

February 2020 – present

Hours: 40/week ; *Full Time*

*Supervisors: Ned Laman*

### **Duties & Contributions**

- Conduct and serve as lead scientist for the Aleutian Islands and Gulf of Alaska Groundfish Assessment Program Groundfish Bottom Trawl surveys
- Conducting research related to fish population dynamics, including fish distribution and ecosystem influences on those processes
- Conducting research to develop indices for untrawlable fish habitat in the Gulf of Alaska
- Design and developing survey-related spatiotemporal modelling tools to incorporate fisheries independent survey data that spans different regions in space and time to estimate the abundance and distribution of groundfish in the Bering Sea
- Providing mathematical and statistical modelling skills to design, conduct, and statistically evaluate our understanding of ecosystem processes based on trawl and oceanographic data
- Develop model-based indices for abundance and fish condition for stock assessment scientists to include in single-species assessments and ESR/ESP, train others to do so
- Participated in NOAA stock assessment methods, climate methods, cultural sensitivity, research at sea training, and internal NOAA tool development meetings and workshops
- Collaborated with NOAA employees to develop innovative method for calculating indices of abundance for input data for stock assessment models
- Initiated and maintained collaboration with international colleagues for data sharing
- Ensure quality control & reproducibility of developed code, train others to do so
- Managed large spatial and temporal NOAA data sets to incorporate into statistical analyses
- Selected as editor's choice in ICES JMS: Understanding transboundary stocks' availability by combining multiple fisheries-independent surveys and oceanographic conditions in spatiotemporal models. ICES JMS 2022
- Press coverage: [As Marine Fish Shift With Climate Change, Scientists Work Across Borders to Ensure Sustainability](#)
- Presentation to plan team summarizing model based index progress (Sept 2021) - "2021 Groundfish Assessment Program Model-based Indices (VAST)"

**Postdoctoral Researcher**

*JISAO University of Washington and Alaska Fisheries Science Center*

*Seattle WA*

*February 2019 – January 2020*

*Hours: 40/week ; Full Time*

*Supervisors: Dr. James Thorson, Dr. Jerry Hoff, Dr. Stan Kotwicki, Dr. Andre Punt*

**Duties & Contributions**

- Conducting research related to fish population dynamics, including fish distribution and ecosystem influences on those processes
- Design and developing survey-related spatiotemporal modelling tools to incorporate fisheries independent survey data that spans different regions in space and time to estimate the abundance and distribution of groundfish in the Bering Sea
- Providing mathematical and statistical modelling skills to design, conduct, and statistically evaluate our understanding of ecosystem processes based on trawl and oceanographic data
- Lead and planned the code & statistical modelling development portion of this team-based statistical and mathematical modeling project to develop survey-related indices of abundance from bottom trawl survey and quantify the total uncertainty associated with the survey
- Determining availability of some fish species to the Alaska Fisheries Science center bottom trawl survey to determine availability and efficacy of groundfish species to the survey
- Participated in NOAA stock assessment methods, climate methods, cultural sensitivity, research at sea training, and internal NOAA tool development meetings and workshops
- Conduct [August 2019] bottom trawl survey fisheries and invertebrate data collection in the northern Bering Sea
- Collaborated with NOAA employees to develop innovative method for calculating indices of abundance for input data for stock assessment models
- Initiated and maintained collaboration with international colleagues for data sharing
- Ensure quality control & reproducibility of developed code
- Managed large spatial and temporal NOAA data sets to incorporate into statistical analyses
- Familiarized with NOAA oceanographic and trawl data for use in complex statistical modelling
- Maintained scientific writing skills by working with PIs to write-up various scientific articles that are in progress
- Performed duties as part of the collaborative international and multi institute team and individually in the field and office setting
- Presented & communicated research results to the scientific community at invited seminar and research meetings

**PhD Candidate and Research Assistant***Stony Brook University**Stony Brook NY*

August 2013 – December 2018

Hours: 40/week ; *Full Time**Committee: Dr. Janet Nye (advisor), Dr. James Thorson, Dr. Tim Miller, Dr. Heather Lynch, Dr. Mike Frisk***Duties & Contributions**

- Research was focused on the population dynamics of fish species, including how to estimate productivity, natural and fishing mortalities, and environmental influences on those processes
- Created and tested a Bayesian temporal model and other statistical tools to incorporate climate data (Gulf Stream index) into age-structured hierarchical statistical models to estimate age-specific fish (summer flounder) abundances over time to represent the relationship between physical and biological interactions of marine ecosystems and living marine resources in the Northwest Atlantic
- Provided mathematical and statistical modelling skills to design, conduct, evaluate and publish alternative models to provide a mechanistic understanding of ecosystem processes based on trawl and oceanographic data
- Familiarized with NOAA NMFS bottom trawl survey data
- Performed Bayesian and Frequentist statistical analyses to derive estimates of fish population characteristics (abundances, reference points, time-varying vital rates)
- Utilized and implemented developed tools to perform statistical analyses of fishery related survey data and invertebrate survey data to determine the nature of ecosystem responses to manmade impacts on the environment (ocean acidification, climate, and fishing)
- Lead multi-institutional team-based statistical and mathematical modeling portion of the project to develop an approach to understand how time varying fishing and time varying climate influence fish abundances
- Participated in and presented at NOAA working groups and stakeholder meetings
- Collaborated with NOAA employees at multiple centers to develop innovative Bayesian model and method to estimate time-varying abundances using climate information
- Developed new methods to calculate time-varying Biological Reference Points using multiple approaches to calculate productivity and climate-dependent statistical models
- Conducted sensitivity analyses in all projects to determine the influence of prior distributions on model results and the relative effect of time-varying population vital rates on temporal variation of results
- Simulated fish populations in ADMB/TMB stock-assessment model that varied in the assumed catchability and determined the model bias and ability for information criterion model selection to select the best performing model
- Ensured quality control & reproducibility of developed code
- Managed large temporal NOAA data sets to incorporate into statistical analyses
- Created and implemented [Rshiny visualization tool](#) to summarize NOAA data
- Performed duties as part of the collaborative multi institute team and individually in the field and office setting
- Communicated science to the public and science community in seminars, public presentations, regional/national/international science conferences, and management meetings (including stakeholders)
- Assessed ocean acidification effects on invertebrate populations using matrix population models and inverse demography

**Science Training and Research to Inform Decisions Intern***Northwest Fisheries Science Center**Seattle WA**May 2017 – August 2017**Hours: 40/week ; Full Time**Supervisors: Dr. James Thorson, Dr. Janet Nye***Duties & Contributions**

- Conducted research related to fish population dynamics, including fish abundance and distribution
- Developed spatio-temporal modelling tools to incorporate citizen-science data to provide density and spatial distribution estimates of fish on Belize and Bahama tropical reefs
- Performed statistical analyses of fisheries related citizen-science data to derive population characteristic estimates
- Provided mathematical and statistical modelling skills to design and conduct a study to understand fisheries dynamics based on reef survey data
- Team-based statistical and mathematical modeling project to extract information from previously existing data sources
- Determined efficacy of using citizen-science data as supplemental information for fish density and spatial estimates
- Participated in NOAA stock assessment methods and internal NOAA tool development meetings
- Collaborated with NOAA employee to develop innovative method for calculating density estimates alternative to traditional fisheries data sets
- Initiated and maintained collaboration with conservation and restoration group, academic, and government institutions
- Ensure quality control & reproducibility of developed code
- Managed large spatial and temporal REEF data sets to incorporate into statistical analyses
- Created and implemented [Rshiny visualization tool](#) to communicate results to the public as well as colleagues
- Performed duties as part of the collaborative international and multi institute team and individually

**NOAA Bottom Trawl Survey Biologist Volunteer***Northeast Fisheries Science Center**Northwest Atlantic**October 2017 – November 2017**Hours: 84/week for 3 weeks ; Seasonal (Full Time while in progress)**Supervisor: Dr. Janet Nye***Duties & Contributions**

- Implemented marine research survey design and sampling principles to conduct the bottom trawl federal research survey
- Followed established survey protocols
- Work required at sea deployments in offshore areas

**Antarctic Field Scientist**

*Oceanites and Stony Brook University*

*Western Antarctica & the Antarctic Peninsula*

*Austral Summers (November/December/January) 2014 – 2017*

*Hours: 56/week for 4 weeks per year ; Seasonal (Full Time while in progress)*

*Supervisors: Ron Naveen, Dr. Heather Lynch*

**Duties & Contributions**

- Implemented marine and terrestrial research survey design and sampling principles to conduct the at sea and land bird and nest counts
- Participated in the international collaborative collection of Antarctic Site Inventory seabird and penguin data that contributed to the research-based evidence provided to the Antarctic Treaty System and CCAMLR (Commission for the Conservation of Antarctic Marine Living Resources ) meetings
- Lead team survey decisions in the field to adjust to field conditions while maintaining statistical integrity of the survey
- Work required at sea deployments and remote offshore and onshore areas
- Followed established survey protocols
- Communicated science to the public to relay the importance of the survey work for understanding the health and productivity of the Antarctic system using penguins and seabirds as indicator species
- Interacted with the public daily and provided informal presentations to answer questions regarding Antarctic ecology, wildlife, and oceanography

**Faculty Research Assistant**

*University of Maryland Chesapeake Biological Lab*

*Solomons, Maryland*

*August 2012 – August 2013*

*Hours: 40/week ; Full Time*

*Supervisor: Dr. Walter Boynton*

**Duties & Contributions**

- Integrate spatial and temporal data to investigate biotic and abiotic indicators of dissolved oxygen in the Chesapeake Bay & its tributaries
- Lead investigator responsible for proposing solutions for the merging of spatial & temporal ecological datasets and resident mathematical modeler and applied statistical programmer (R software)
- Manipulate, organize, and analyze spatial oceanographic data and satellite imagery (ArcGIS v.10)
- Implemented survey design and sampling principles to conduct the water quality research survey
- Sampled and processed research samples (sediment and water samples) according to statistical protocols
- Work required at sea deployments and operation of motor vehicle
- Performed data analysis to determine the nature of ecosystem responses to natural and man-made impacts on the environment (Chesapeake Bay and tributary response to natural and man-made nutrient input)
- Developed statistical model to estimate the relationship between location, time of day, and the chemical characteristics of the system (dissolved oxygen)

**Phocidae Survey Technician Volunteer**

*Riverhead Foundation, Capt. Lou Fleet*

*Long Island, NY*

Summer 2016

Hours: 5/week for each cruise ; *Part Time*

*Supervisor: Val Sherlock*

**Duties & Contributions**

- Implemented marine research survey design and sampling principles to conduct the opportunistic research survey
- Followed established survey protocols
- Work consisted of small vessel deployments
- Identified NY seal species and collected oceanographic and descriptive cruise information

**Riparian Technician**

*University of South Dakota*

*Mandan, North Dakota*

May 2012 - August 2012

Hours: 40/week ; *Full Time*

*Supervisor: Dr. Mark Dixon and Victoria Albers*

**Duties & Contributions**

- Implemented freshwater and riparian research survey design and sampling principles to conduct the research survey
- Followed established survey protocols
- Work required water deployments
- Made in the field sampling decisions to correspond with statistical protocols
- Work required operation of motor vehicle and small vessel

**Desert Tortoise Line Distance Technician**

*Institute for Wildlife Studies*

*Las Vegas, Nevada*

March 2012 - May 2012

Hours: 40/week ; *Full Time*

*Supervisor: Dr. Nate Gregory*

**Duties & Contributions**

- Implemented research survey design and sampling principles to conduct the research survey
- Followed established survey protocols
- Made in the field sampling decisions to correspond with statistical protocols
- Work required operation of motor vehicle

**Research Assistant and Intern**

*Dolphin Research Center*

*Grassy Key, FL*

September 2011 - January 2012

Hours: 40/week ; *Full Time*

*Supervisor: Emily Guarino*

**Duties & Contributions**

- Implemented research survey design and sampling principles to conduct the research survey
- Followed established survey protocols

## GRANTS & AWARDS

**National Catch Share Program & Magnuson-Stevens Act Implementation Funds**, 2020, \$165,000 USD  
**IACS Young Writer's Scholarship**, 2018, \$500 USD  
**Distinguished Travel Award**, 2018, \$1500 USD  
**PhD Works Professional Development Award for Inclusion and Equity**, 2018, \$75 USD  
**Institute for Advanced Computational Science Travel Scholarship**, 2017, \$1500 USD  
**ICES Early Career Scientist Travel Grant**, 2017, \$500 EUR  
**Maze Landeau Travel Award**, 2017, \$850 USD  
**PICES/ICES 3<sup>rd</sup> Early Career Scientist Conference Travel Award**, 2017, \$890 CAD  
**Pikitch Family Endowed Student Research Award**, 2016, \$1000.00 USD  
**NMFS Sea Grant Population and Ecosystem Dynamics Fellowship**, 2015, \$108750.00 USD  
**School of Marine and Atmospheric Science Travel Award**, 2015, \$300.00 USD

## HONORS & DISTINCTIONS

**Sea Grant Population Dynamics Fellowship**, 2015 – 2018  
*competitive fellowship program to forge collaborations between NOAA and population dynamics/marine resources PhD students*  
**Pikitch Family Endowed Student Research Award**, 2016  
*recognizes outstanding PhD research proposals*  
**Sea Grant Fellow**, 2014 – 2016  
**American Fisheries Society Best Student Poster Finalist**, 2014, Quebec City, QC  
**Robert F. Smart Award in Biology**, 2010  
*most outstanding research proposal at University of Richmond*  
**Richmond Arts & Sciences Research Grant**, 2010  
**Howard Hughes Medical Institute (HHMI) scholar**, 2009  
**Beta Beta Beta Biological Honors Society Elected Vice President**, 2009

## TEACHING

**VAST Workshop Instructor** for use and theory of spatio-temporal modelling tool  
*Winter 2020*  
*Alaska Fisheries Science Center, WA*  
**Guest Lecturer** for Principles of Fish Biology and Management  
*Spring 2015*  
*Stony Brook University, NY*  
**Teaching Assistant** for Fundamentals of Scientific Inquiry in the Biological Science  
*Spring 2014*  
*Stony Brook University, NY*  
**Teaching Assistant** for Long Island Marine Habitats  
*Fall 2013*  
*Stony Brook University, NY*

## PROFESSIONAL OUTREACH & EQUITY/INCLUSION

### Science Communication

#### **Skype a Scientist, 2018 – present**

*Engaging with classrooms from around the world via live Q&A sessions with a scientist*

#### **Riverhead Foundation, 2015 - 2016**

*Volunteered with Education & Outreach to educate the public about marine organisms found in their waters*

#### **The Gonzo Scientist, 2011 - present**

*Founded this science communication site and blog to translate scientific news and articles for the public to promote scientific education and access to science*

#### **AFS Habitat, 2016 - 2018**

*Contributed science articles about up to date research in fisheries and ecosystem sciences written for the public*

### Equity & Inclusion

#### **Postdoc Diversity Alliance, Leadership Team, 2019**

*Leadership team, member, & ally of postdoc community to increase diversity of research leaders in academia & industry, advocate for institutional support of equity & inclusion, & promote professional development among peers. Helped organize Diversity Statement event.*

#### **Quantitative Women in STEM, 2019**

*Founded & organized a working group as a platform for women in STEM to raise workplace equity issues as well as forge collaborations*

#### **500 women science Seattle chapter, 2019**

*Member of local chapter whose goal is to 'promote an inclusive scientific community that brings progressive science-based solutions to local and global challenges'*

#### **Abstract Reviewer for SACNAS, 2019**

*Volunteer conference abstract reviewer for the Society for Advancement of Chicanos/Hispanics and Native Americans in Science- is an inclusive organization dedicated to fostering the success of Chicanos/Hispanics and Native Americans*

#### **RLadies Seattle**

*Member of the local chapter of R-Ladies Global that seeks to promote diversity in the R community*

### STEM student promotion

#### **Clean Tech Competition Judge, 2017**

*Real-world engineering research and design competition for pre-college youth*

#### **Ocean Bowl Volunteer, 2015 - 2016**

*Judge at local Ocean (Bay Scallop) Bowl competition for high school students*

#### **STEM & Writing Tutor**

*All levels from primary school to undergraduate students*

### Committees

#### **American Fisheries Society Student Subunit, 2017 - 2018**

*Founding member and treasurer of the Stony Brook University AFS student Subunit*

#### **Institute for Advanced Computational Science governing body member, 2018**

*Member to organize professional and social events for Stony Brook University computational graduate students*

## PROFESSIONAL COURSEWORK & TRAINING

### **ICES/QUEST Applications of quantitative methods in fishery management, 2017**

Management Strategy Evaluation Workshop

Instructors: Gavin Fay, Trevor Branch, Erik Franklin, Cam Ainsworth, Brice Semmens

### **American Fisheries Society Bayesian II, 2015**

Intermediate Bayesian Inference Using Gibbs Sampling (BUGS) for Fish Biologists

Instructors: Dan Rawding, Pete McHugh, Catherine Michielsens

### **Stock Assessment Crash Course, 2014**

ADMB Instructional Course

Instructors: Olaf Jensen, John Wiedenmann

### **MeTooSTEM Action workshop, 2019**

Methods to take effectively take action against sexual harassment at universities

Instructors: Dr. BethAnn McLaughlin, MeTooSTEM

### **Building Healthy Academic Workplaces, 2019**

Strategies to respond to sexual harassment and gender discrimination at UW

Instructors: Kiana Swearingen and Page Sechrest, SafeCampus UW
