ALASKA INTER-TRIBAL COUNCIL

ADVOCATING FOR 229 FEDERALLY RECOGNIZED SOVEREIGN TRIBES

445 East Fifth Avenue - Anchorage, Alaska 99501 907-563-9334 Main 907-563-9337 Fax

AGENDA D-2 Supplemental JUNE 2011

Mr. Eric Olsen, Chairman North Pacific Fishery Management Council 605 West 4th Avenue, Suite 306 Anchorage, Alaska 99501

13 MAY 2011

RE: TRIBAL HAPC NOMINATION PROPOSAL REQUESTS

Dear Mr. Olsen,

We, the Federally Recognized Sovereign Alaska Tribes represented through the Alaska Inter- Tribal Council (AITC) unfortunately missed the North Pacific Fishery Management Council's (NPFMC) announcement last year for proposals to be considered under your Habitat Areas of Particular Concern (HAPC) process. We understand that one of our Executive Council Members, George Pletnikoff, testified and requested that the Council, through your Outreach Committee, begin a process to train our Federally Recognized Sovereign Alaska Tribal Governments, or at least inform us, of this very critical process that can have long term affects on our survival as Alaska's Indigenous Peoples.

As you are aware, Presidential Executive Order 13175 mandates that all Federal Agencies initiate meaningful Tribal Consultation with all Indian/Alaska Native Tribes.

"The United States has a unique legal and political relationship with Indian tribal governments, established through and confirmed by the Constitution of the United States, treaties, statutes, executive orders, and judicial decisions. In recognition of that special relationship, pursuant to Executive Order 13175 of November 6, 2000, executive departments and agencies (agencies) are charged with engaging in regular and meaningful consultation and collaboration with tribal officials in the development of Federal policies that have tribal implications, and are responsible for strengthening the government-to-government relationship between the United States and Indian tribes."

We strongly believe and affirm that the sensitive habitat of our waters, waters that our Federally Recognized Sovereign Alaska Tribes, Villages, and Nations have never relinquished authority to manage to Russia, the United States of America or the State of Alaska. The decisions of the North Pacific Fishery Management Council have significant and detrimental tribal implications and impacts. The North Pacific Fishery Management

Council is bound to implement Presidential Executive Order 13175 and provide for the Federally Recognized Sovereign Alaska Tribes <u>regular and meaningful consultation and</u> collaboration.

Many of our Federally Recognized Sovereign Alaska Tribes feel the North Pacific Fishery Management Council has not met the requirement and responsibility of Presidential Executive Order 13175, and we are very concerned. The decisions of North Pacific Fishery Management Council without the Federally Recognized Sovereign Alaska Tribes consultation and collaboration may be considered intentional acts of Genocide (18 USCA 1091(a) (4)), by continue to make decisions that "subjects the group to conditions of life that are intended to cause the physical destruction of the group in whole or in part;" without the Federally Recognized Sovereign Alaska Tribes participation.

Through this letter, AITC is requesting that the North Pacific Fishery Management Council once again consider HAPC nominations after training the Federally Recognized Sovereign Alaska Tribes in your process and procedures, and further request Mr. Eric Olsen, Chairman, North Pacific Fishery Management Council to assistance Alaska Inter-Tribal Council and the numerous Federally Recognized Sovereign Alaska Tribes in putting together such nominations to fruition. Our Tribes Villages and Nations are facing many serious economic, social, spiritual and physical challenges. Our ways of life are threatened by the declines we face in the salmon by catch activities that also severely impact the rest of the foods we depend upon for our survival. North Pacific Fishery Management Council makes many decisions that can have negative impacts on our people. The dangerous practice of trawling in all its forms comes to mind.

On behalf of our Federally Recognized Sovereign Alaska Tribal Governments, Alaska Inter-Tribal Council strongly urges and requests that at the very least, the Council considers our proposal herein stated, and to host collaborations and consultations in the hub cities, villages across Alaska.

We thank you for your consideration and look forward to hearing from you soon.

Sincerely,

David Harrison, Executive Director

Cc The Honorable Barack Obama
President of the United States of America

The Honorable Ken Salazar, Secretary U.S. Department of the Interior

The Honorable Hillary Clinton, U.S. Secretary of State

The Honorable Sean Parnell Governor State of Alaska

The Honorable and Respected Leaders
229 Federally Recognized Sovereign Alaska Tribal Governments.

North Pacific Fishery Management Council

Eric A. Olson, Chairman Chris Oliver, Executive Director

605 W. 4th Avenue, Suite 306 Anchorage, AK 99501-2252

Fax (907) 271-2817

May 23, 2011

David Harrison, Executive Director Alaska Inter-Tribal Council 445 East Fifth Avenue Anchorage, AK 99501

Dear Mr. Harrison:

We received your May 13, 2011 letter addressed to Chairman Olson (attached). Thank you for your input regarding the Alaska Inter-Tribal Council's concerns regarding the North Pacific Fishery Management Council's (Council) Habitat Area of Particular Concern (HAPC) process and Presidential Executive Order 13175: Consultation and Coordination with Indian Tribal Governments (E.O. 13175).

With regards to your request that the Council again consider HAPC nominations, I will pose the question of reopening HAPC nominations and reinitiating the HAPC process to the Council during staff tasking at the next Council meeting, scheduled for this June in Nome, Alaska. If the Council decides to reopen that HAPC process, we can also consider ways to utilize our staff, or our Rural Community Outreach Committee, to better inform interested parties wishing to engage in that process. The Council's Outreach Committee and associated outreach activities were designed to enhance the participation of Alaska Native and other rural constituents in our management process. These activities are supplemental to the formal government-to-government Tribal consultations required by E.O. 13175.

With regard to the latter, Council actions are advisory to the Secretary of Commerce, and as such, we believe the National Oceanic and Atmospheric Administration (NOAA) is the federal agency responsible for formal government-to-government Tribal consultation under E.O. 13175, and any requests referencing E.O. 13175 should be directed to NOAA's National Marine Fisheries Service (NMFS).

Again, thank you for your input. We look forward to hearing from you during staff tasking at the next Council meeting. If unable to attend in person, written comments for Council notebooks will be accepted at the Council office until Tuesday, May 31, 2011 at 5:00 p.m.

Sincerely,

Chris Oliver Executive Director

Cc: President Barak Obama

Secretary of State Hillary Clinton, Department of State Secretary Ken Salazar, Department of the Interior

Dr. Jim Balsiger, Alaska Regional Administrator, National Marine Fisheries Service

Governor Sean Parnell, State of Alaska

19072712817

Mr. Eric Olson Chairman North Pacific Fishery Management Council 605 West 4th Ave, Ste 306 Anchorage, AK 99501 RECEIVED

JUN - 1 2011 May 31, 2011

LATE COMMENT

Re: Maximum size limits, with accompanying methodologies and assumptions under the CSP

Chairman Olson:

2011-06-01 12:37

I appreciate the chance to comment on the issue of the CSP algorithm scheduled for discussion at the Council's June meeting in Nome. Unfortunately, I am unable to attend in person because my business demands my presence seasonally from mid-May through mid-September, as is likely the case with most of the charter community.

As I share my perspective on maximum size limits and methodologies, please keep in mind that any methodology determined appropriate by the Council will not alleviate the inadequacy of allocation under the CSP for halibut anglers choosing to use a guide. Allocations are already barely sufficient under the GHL for area 3A angler demand and sorely insufficient for area 2C angler demand. At a minimum, CSP allocations should align with current allowable harvest under the GHL at similar abundance levels.

Maximum Size Limits

Straight use of maximum size limits to control angler harvest strips away a core benefit for guided fisherman. Sport fisherman do not fish to fill pounds of quota share. To a large extent, they fish in anticipation of being able to catch and keep a "whopper", if even just a single fish. Across-the-board maximum size limits eliminate this opportunity.

Area 2C guided fisherman are currently confused as to why other anglers, up fishing with friends on the same halibut grounds, can keep two halibut of any size per day, while they are confined to a daily bag limit of one fish 37 inches or under. They are also perplexed by the regulation when they observe long-liners pulling gear and are informed that the commercial sector is obligated to keep everything 32 inches or greater.

The Council chose to pass on measures, such as annual or reverse slot limits (both currently used by state managers), that would allow guided fisherman to experience benefits that are core to the recreational fishing experience and closer in alignment with opportunities afforded other user groups. I encourage the Council to fundamentally re-consider its approach to harvest controls, whatever the presiding management plan, so that the angling experience may retain more aspect of its traditional appeal.

Fluctuations in Demand

The commercial halibut fishery routinely fishes to its allocation, regardless of the market value of its harvest. Recreational anglers, in the market for catching halibut, will forego spending their resources on a fishing trip if the opportunity to catch and keep halibut is significantly diminished, resulting in lower harvests than projected under an assumption of static demand.

This premise is no longer anecdotal. For example, I fished 81 days during last season during recession conditions and started on May 18. This year to date I have 51 days booked and start on June 9. Ninety percent of my seasonal activity is established by this time every year, and given the lack of incentive for fisherman to take a day on a 37 inch one fish limit, this is probably where things will remain for my guided trips this summer.

Most 2C operators are also reporting negative angler reaction to the new regulation, and that a significant number of people are opting out of fishing under the maximum size limit. Fisherman that have already fished under the 37 inch rule this year are reporting that they will not return. Modeling should account for fluctuations in demand/effort in response to diminished or liberalized opportunity. More restrictive access to halibut is an added cost to fisherman, while more liberal access is a benefit. Consumers will respond accordingly by decreasing or increasing consumption.

Neither of the King methodologies account for change in demand, nor has the state hybrid (Meyer Method C) yet incorporated a mechanism to reflect change in demand. Managers can easily cause the sport sector to undershoot its mark by implementing harvest restrictions that make it less appealing for fisherman to participate in the guided halibut fishery but ignoring the influence of those restrictions on removals.

High-Grading

Area 2C is the only area governed by guided angler limits more restrictive than the historical bag limit of two halibut per day of any size. Logbook data from charter operations in 2C show that anglers caught fewer than one fish per day on average under a restriction of one halibut per day of any length, even with an opportunity to high-grade to a fish of any size. Anglers were either unable to catch or unconcerned about catching more than two halibut per day on average.

Unless a maximum size limit affords anglers more incentive or more opportunity to high-grade, it appears unlikely that all fish under a maximum size limit scenario will come in exactly at that limit. It is also unlikely that maximum size limits will provide more opportunity for fish of a certain length, as there are only a certain percentage of fish at that length naturally available by area annually.

There may be more incentive to high-grade under maximum size limits as anglers fishing for multiple days may not be able to offset a small yield of fillets from a small fish one day with a higher yield from a bigger fish on a different day. With a maximum size limit in a very restrictive range, such as 37 inches, this seems improbable because the gain in yield moving from a fish with a length in the low to mid-30s to a 37 inch fish isn't substantial, especially when compared with opportunities afforded by fishing for other species.

Bias in Estimating Average Weight

ADF&G sub-area G (Gustavus/Elfin Cove) accounted for approximately 23% of 2C guided removals by weight in 2010. Only 54% sampling occurred in sub-area G for the same year. The sampling showed that 41% of harvest by weight in the area were over 60 inches (Meyer analysis).

Creel samples may only be taken if all halibut are left whole. In Gustavus, where I operate, many captains will fillet halibut at sea to avoid congestion at dockside where there Is inadequate room at the floats to accommodate leisurely filleting of fish at port. Fisherman are much more likely to request that

captains refrain from filleting at sea when the catch is picture-worthy, meaning some or all nice halibut in the catch. This practice skews the weight representation being fed to ADF&G average weight modeling and can contribute to an over-projection of 2C guided sport harvest.

Summary

Maximum size limits may be the least friendly of available harvest measures to apply to the guided sport fishery. Any controls, especially low maximum lengths, will discourage angler participation in the fishery and result in lower removals and should be accounted for in modeling. High-grading under a maximum length scenario is not likely to result in a significant increase in average weight across fish historically below the size limit nor is it likely that most anglers will be able to high-grade to the maximum size limit. It would benefit anglers, the charter community, and managers to examine potential bias in harvest data collection.

I urge the Council to be flexible in its thinking as we move forward in trying to establish long-term, equitable solutions to the management of the halibut resource.

Sincerely,

TATE COMMENT

FROM: Carl Wassilie Yup'iaq Biologist Alaska's Big Village Network 3724 B Campbell Airstrip Road Anchorage, AK 99504

Carlwassilie.acyn@gmail.com

TO:

North Pacific Fishery Management Council 605 West 4th Avenue, Suite 306 Anchorage, AK 99501-2252 Fax: (907) 271-2817

Dear Mr. Olson and Council Members:

I am a subsistence fisherman in the Yukon-Kuskokwim region. I am writing to comment on chum salmon bycatch reduction measures in the Bering Sea pollock fishery. High chum salmon bycatch numbers may threaten our salmon and our way of life, and current regulations provide no limit on the number of chum salmon which may be taken as bycatch. Chum salmon serves an important cultural and economic role in my family, and throughout Western Alaska, particularly in recent years when Chinook salmon runs have been low and harvests restricted.

Chum salmon provides a critical source of food for us and and Chum provides nutrients for other living organisms for a rich ecosystem that is critical to survival. The commercial salmon harvest provides the only means of income for many who live in the remote villages of the Yukon River. Our salmon runs must be protected.

Fall chum salmon runs on the Yukon River have been below average in recent years. As a result, subsistence harvests of fall chum salmon have been restricted, and no directed commercial harvests of fall chum salmon have taken place on the Yukon River.

While bycatch is not the sole cause of these low runs, it is vital that we all bear the burden of sacrifice to protect our salmon runs. Therefore, I recommend that the Council adopt management measures which will effectively reduce and limit chum salmon bycatch and adequately protect Western Alaska chum salmon runs at a biologically acceptable level.

Sincerely,

Carl G. Wassilie

Yup'iaq Biologist

LATE COMMENT

Oissunamiut Tribal Government

May 25, 2011

RECEIVED

North Pacific Fishery Management Council 605 West 4th Avenue, Suite 306, Anchorage, Alaska 99501-2252

Dear Mr. Olson and Council Members:

We are the Chevak Native Village a federally recognized tribe for the Kashunamiut. Through our tribal government the Chevak Traditional Council represent the interests of the Kashunamiut for their health, safety and welfare. This letter is our comment on the request for chum salmon bycatch reduction measures in the Bering Sea pollock fishery. High chum salmon bycatch numbers may threaten the salmon runs and our way of life, and current regulations providing no limit on the number of chum salmon which may be taken as bycatch.

Chum salmon serves important cultural and economic role in Chevak, and throughout Western Alaska, it is our longstanding practice to support other communities that are affected by these low returns.

In recent years when Chinook salmon runs have been low and harvests restricted, our elders have been taken as criminals when they are practicing their lifestyles just to feed their families. Chum salmon provides a critical source of food for us, and the commercial salmon harvest provides the only means of income for many who live in the remote villages of the of the Yukon River. Our subsistence way of life must also be protected at all costs, it should not be compromised so that pollock fisheries will flourish and literally pollute the Bering Seas with fish that they discard. They may do well to provide their bycatch to the subsistence users if the returns are nil to nothing as has been experienced. They are also jeopardizing other subsistence resources when they are scraping the sea bottom which may also be vegetation for fish and sea mammals. It has been said that the sea bottom vegetation will take several years to grow back, and that too will not only bring hardship not just for us but also for the fish and game.

These are just a drop in the bucket of the need to protect the subsistence users mainly because they do not have the funds to travel to your meetings and provide for comments which their counterparts can do and this in turn looks like the native population is divided. Our CDQ funded organizations are using Pollock fisheries funds to come to your meetings in numbers and campaign for Pollock fisheries and forget that their member villages are subsistence and commercial fish users.

Let this letter reflect that there needs to be measures taken to protect our salmon runs and that the burden seems to be carried by the small guy who does not have a voice and relies on these returns for his survival. Subsistence is a way of life and should not be compromised at any cost. Commercial fisheries is often the only source of income and mainly used for subsistence hunting and fishing gears and to survive through the harsh winters. Let this letter reflect our request for the need for the Council to adopt management measures to effectively reduce the bycatch and adequately protect chum salmon runs which the villages need to survive on.

Cordially,

James Ayuluk Tribal Chief

RESOLUTION 2011-16

A RESOLUTION REQUESTING NORTH PACIFIC FISHERIES MANAGEMENT COUNCIL (NPFMC) TO ADOPT MANAGEMENT MEASURES ADDRESSING THE CHUM SALMON BYCATCH IN THE BERING SEA POLLOCK FISHERY

WHEREAS: the Chevak Traditional Council (Council) a governing body for the Chevak Native Village (Chevak) a sovereign entity and a federally recognized Tribe; and

WHEREAS: the Council represents the interests of the Kashunamiut for their health, safety and welfare; and

WHEREAS: the five member governing body of the Council is fully authorized to act for and on behalf of it's tribal members arising under the Self-Determination Act of 1975, Public Law 93-638 as amended, 25 U.S.C. Et. Seq.; and

WHEREAS: chum salmon are a vital subsistence fishery resource and provide an essential source of food, income and culture for the people of the Yukon River region; and

WHEREAS: subsistence harvests of fall chum salmon have been restricted in recent years, and no directed commercial harvests of fall chum salmon have taken place on the Yukon River; and

WHEREAS: according to the best available scientific information a portion of the chum salmon taken as bycatch are of Western Alaska origin, including the Yukon River; and

WHEREAS: extremely high bycatch numbers have been reached under the current management measures and although chum salmon bycatch has been low in the last few years, there is nothing in regulation to prevent extremely high bycatch from occurring again and it is prudent to adopt new management measures; and

WHEREAS: the NPFMC is in the process of developing regulations intended to minimize chum salmon bycatch; and

NOW THEREFORE BE IT RESOLVED: that the Chevak Native Village requests that the North Pacific Fishery Management Council adopt management measures

which will effectively reduce and limit chum salmon bycatch and adequately protect Western Alaska chum salmon runs at a biologically acceptable level.

CERTIFICATION
