

## Analysis of Management Options for the Area 2C Charter Halibut Fisheries for 2023

*Tables only, full report to follow.*

Table 1. Estimated average net weight (headed and gutted) of Pacific halibut by length for Area 2C.  
Estimates are based on the current International Pacific Halibut Commission length-weight relationships<sup>1</sup>.

\*Effort is defined as angler-days with recorded bottomfish hours or harvest of at least one halibut.

Table 4. Forecasts of effort, halibut harvest per unit effort (HPUE), and harvest (numbers of halibut) for Area 2C in 2023 under status quo regulations, with associated standard errors. Status quo regulations include a one-fish bag limit and U40O80 reverse slot size limit.

\*This SE cannot be calculated because unlike effort and harvest, HPUE is not expected to additive across subareas.

Table 5. Projected charter removals (Mlb) for Area 2C in 2023 under reverse slot limits ranging from U35O50 to U50O80 with a 1-fish bag limit. Shaded cells represent projections for the most liberal combinations that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.

Table 8. Projected charter removals (Mlb) for Area 2C in 2022 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with **days closed throughout the season**. Shaded cells represent projections for the most liberal upper and lower size limits that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality

Table 9. Projected charter removals (Mlb) for Area 2C in 2023 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with days closed for the entire season. Shaded cells represent projections for the most liberal upper and lower size limits that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.

Table 11. Projected charter removals (Mlb) and harvest for Area 2C in 2023 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with days closed throughout the season and a **two fish annual limit**. Shaded cells represent projections for the most liberal upper and lower size limits that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.

Table 12. Projected charter removals (Mlb) and harvest for Area 2C in 2023 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with one days closed for the entire the season and a **second day closed for part of the season with at least two days in between closures, and no annual limit**. Shaded cells represent projections for the most liberal upper and lower size limits that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.

Table 13. Projected charter removals (Mlb) and harvest for Area 2C in 2023 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with one days closed for the entire the season and **a second day closed for part of the season with at least two days in between closures, and a 3-fish annual limit**. Shaded cells represent projections for the most liberal upper and lower size limits that do not exceed the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.

Table 14. Projected charter removals (Mlb) and harvest for Area 2C in 2023 under reverse slot limits with lower limits of the protected slot ranging from 35 to 50 inches and an upper limit of 80 inches with one days closed for the entire the season and a **second day closed for part of the season with at least two days in between closures, and a 2-fish annual limit**. All projections were below the 2022 allocation of 0.82 Mlb. All values in the table include corrections for errors in estimation of average weight and inflation factors for release mortality.
