# Overview

## GULF OF ALASKA GROUND FISH ASSESSMENTS

Biennial **"on"** year for GOA

12 stocks in Tier 3

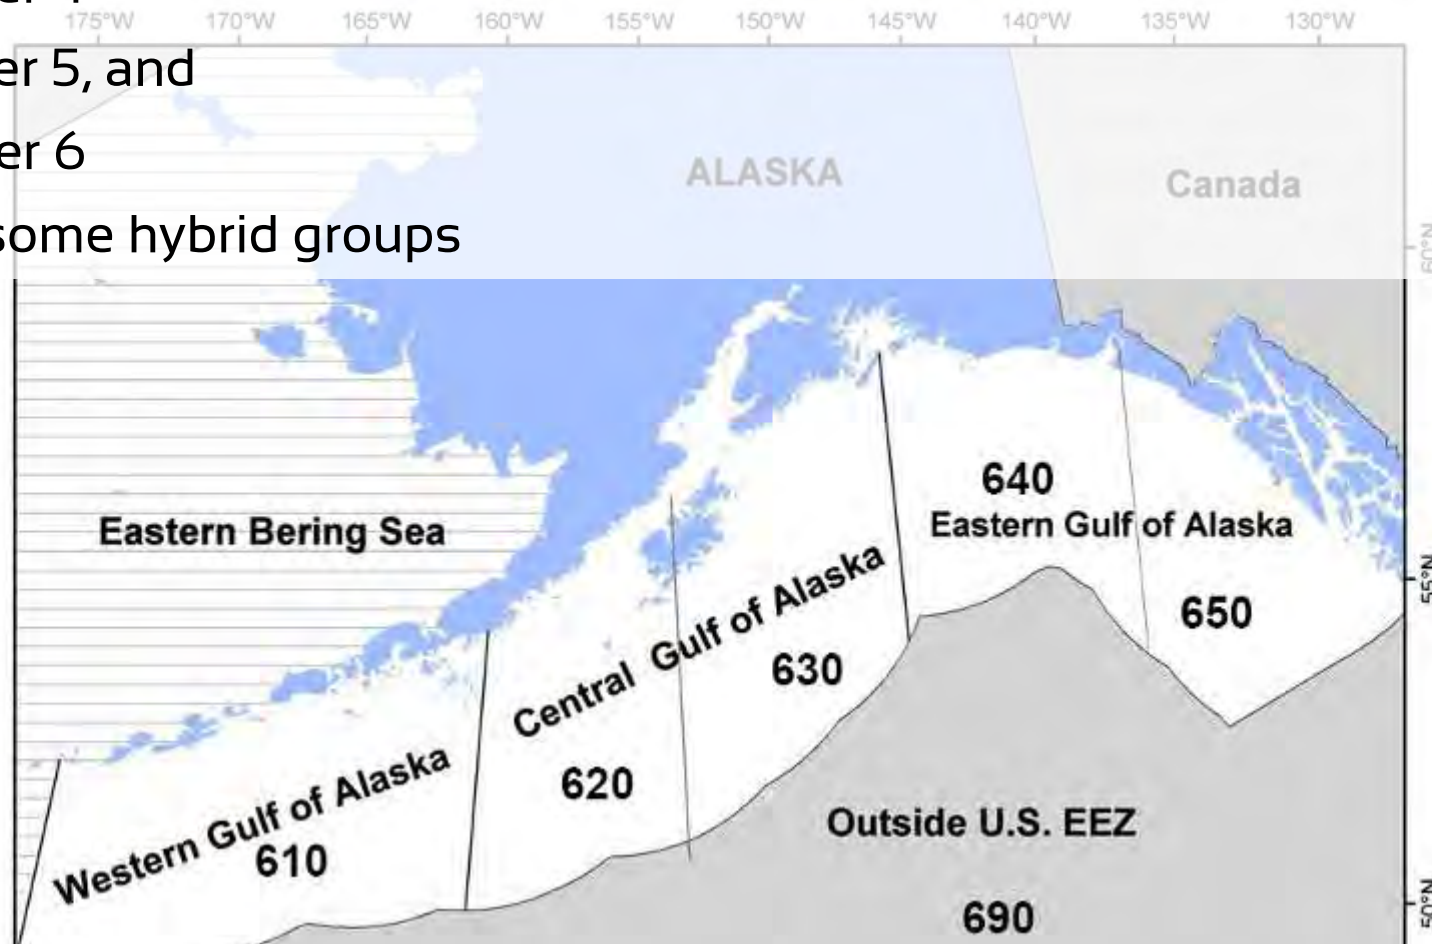

(mostly above  $B_{40\%}$ )

2 in Tier 4

7 in Tier 5, and

5 in Tier 6

Note some hybrid groups

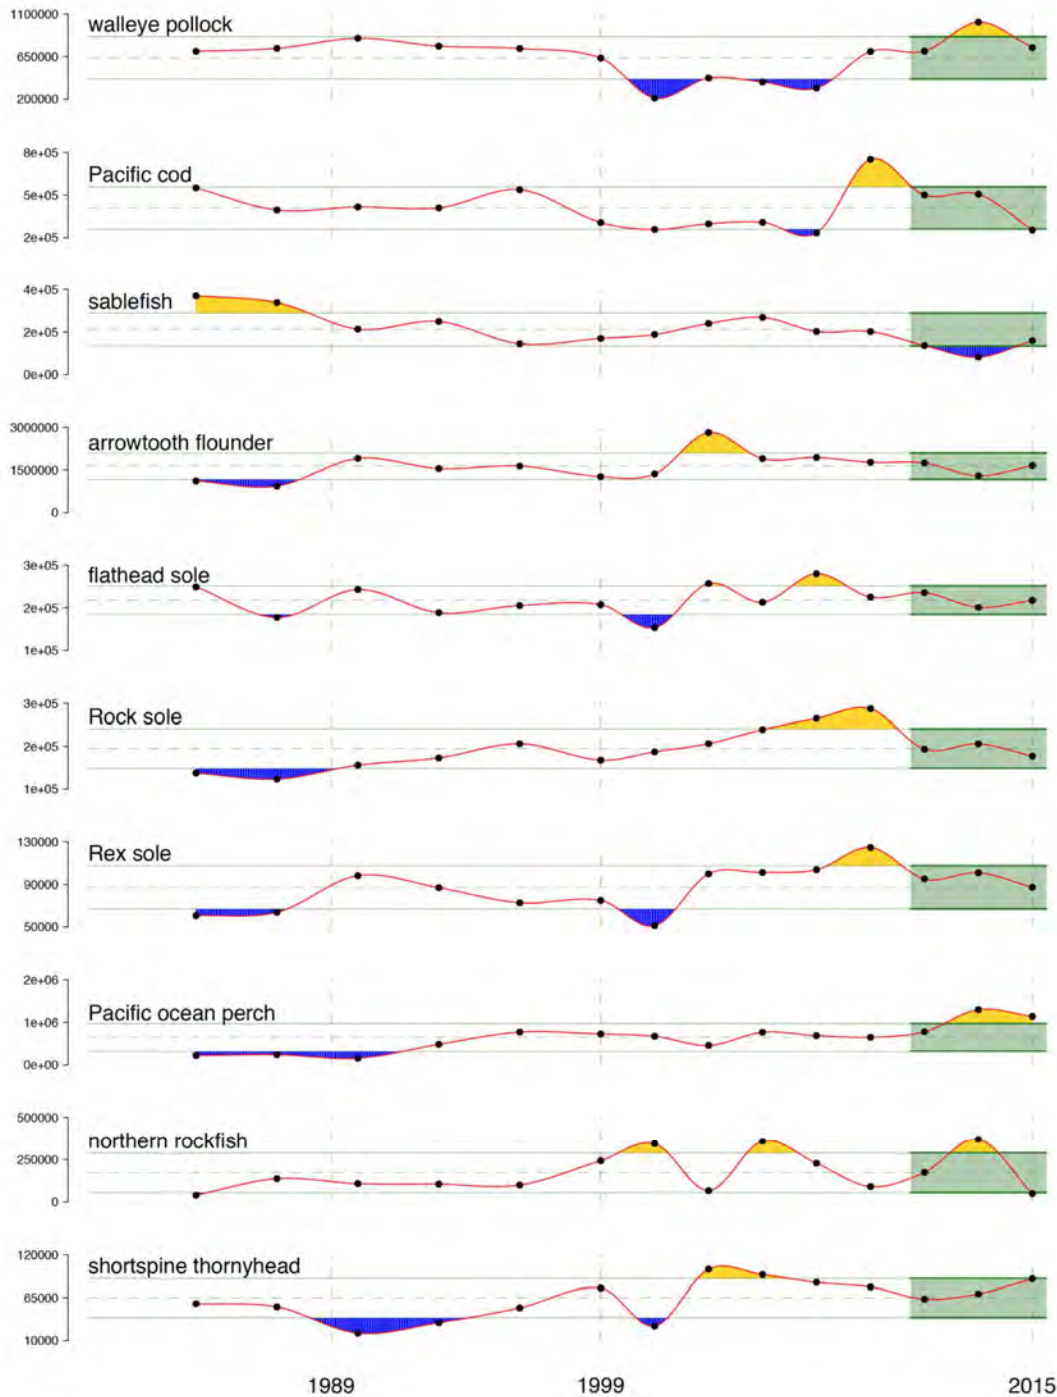

LF OF ALASKA GROUNDFISH ASSESSMENTS

# 2014-2015 ABC change

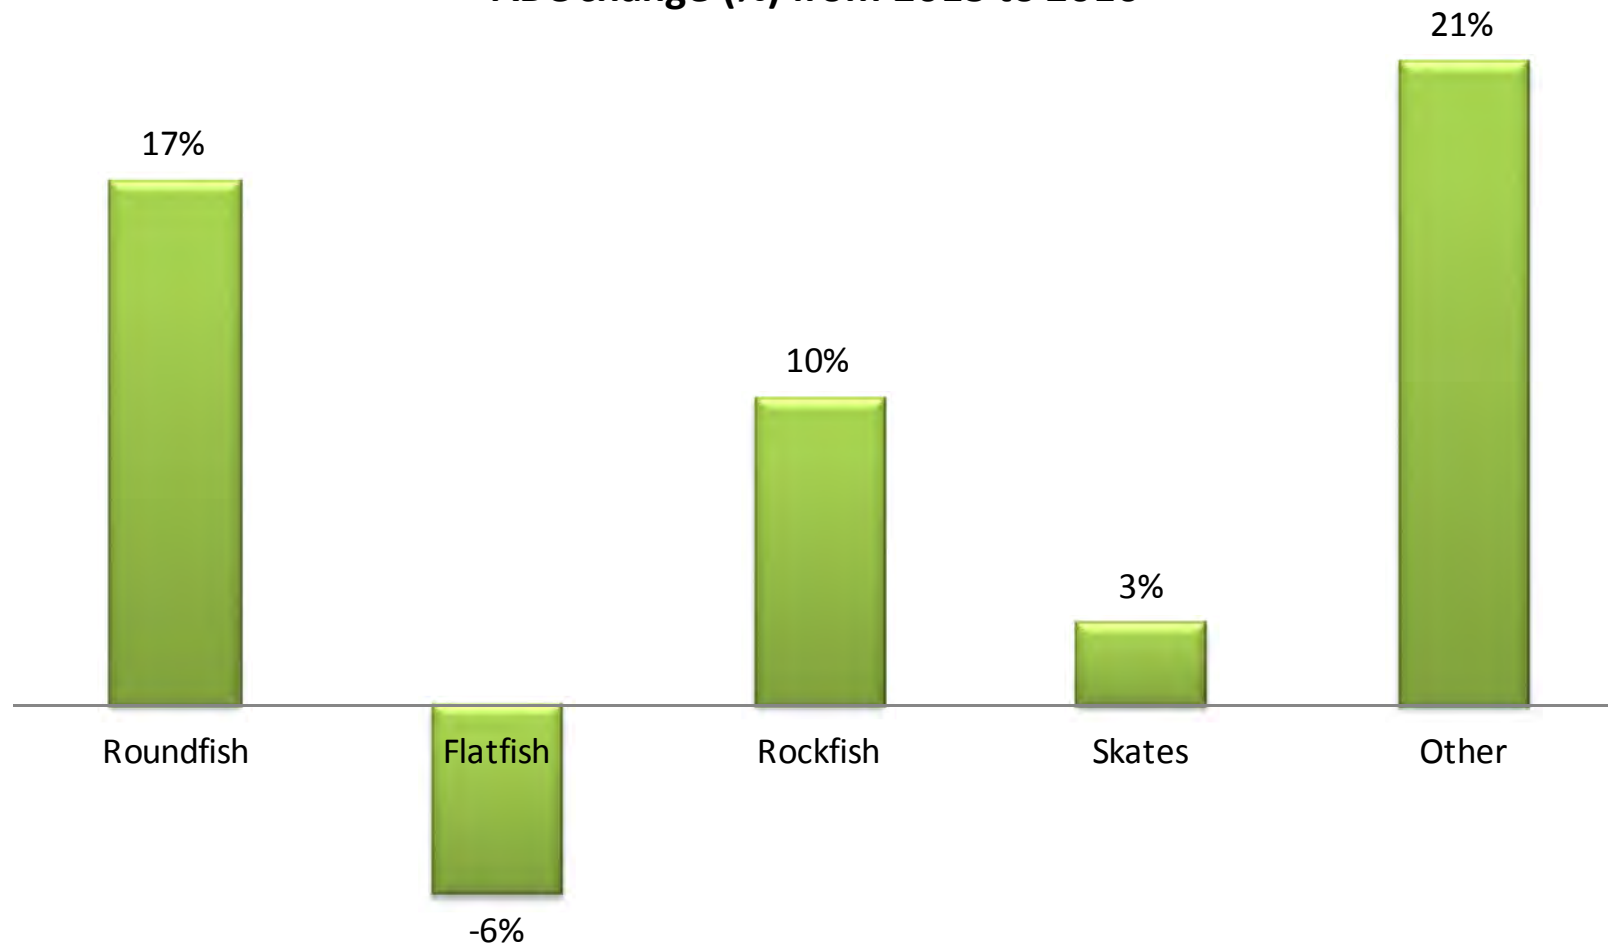

# 2015-2016 ABC change

### ABC change (%) from 2015 to 2016

# Percentage change in ABC, 2015-2016

# GOA Catch and ABC levels

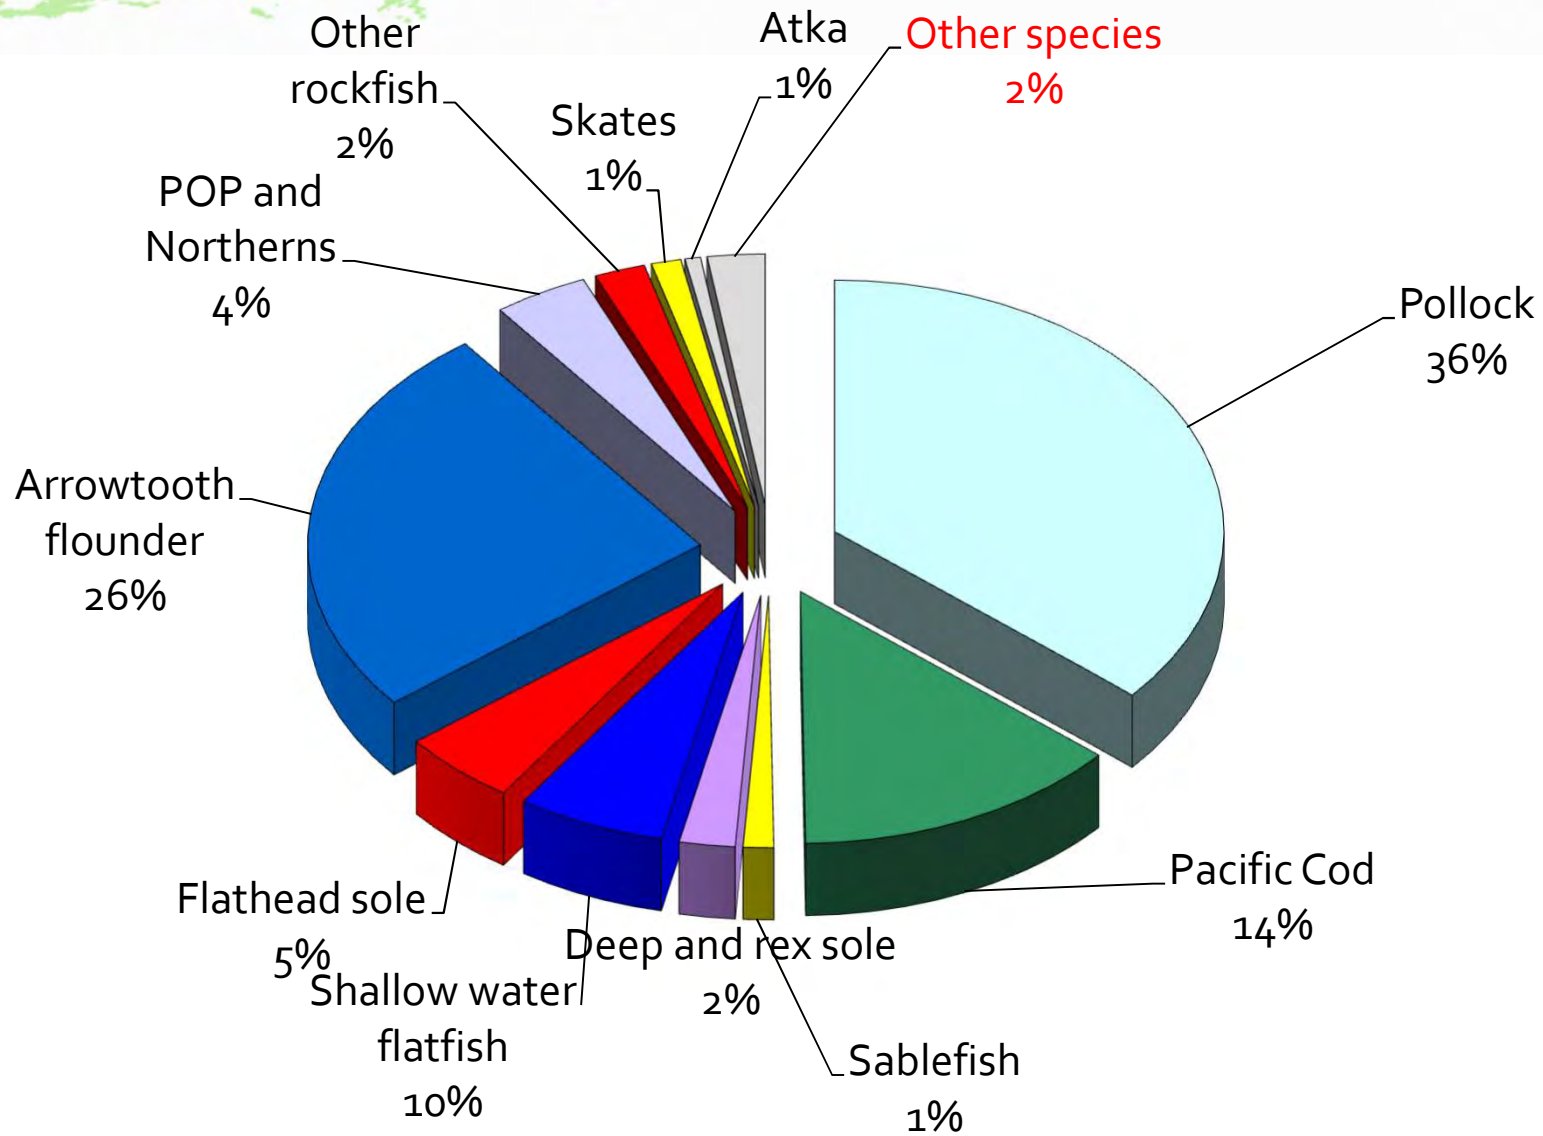

# GOA Catch and ABC levels

# GOA 2015 ABC's: 685,597 t

# GOA 2016 ABC's: 728,770 t

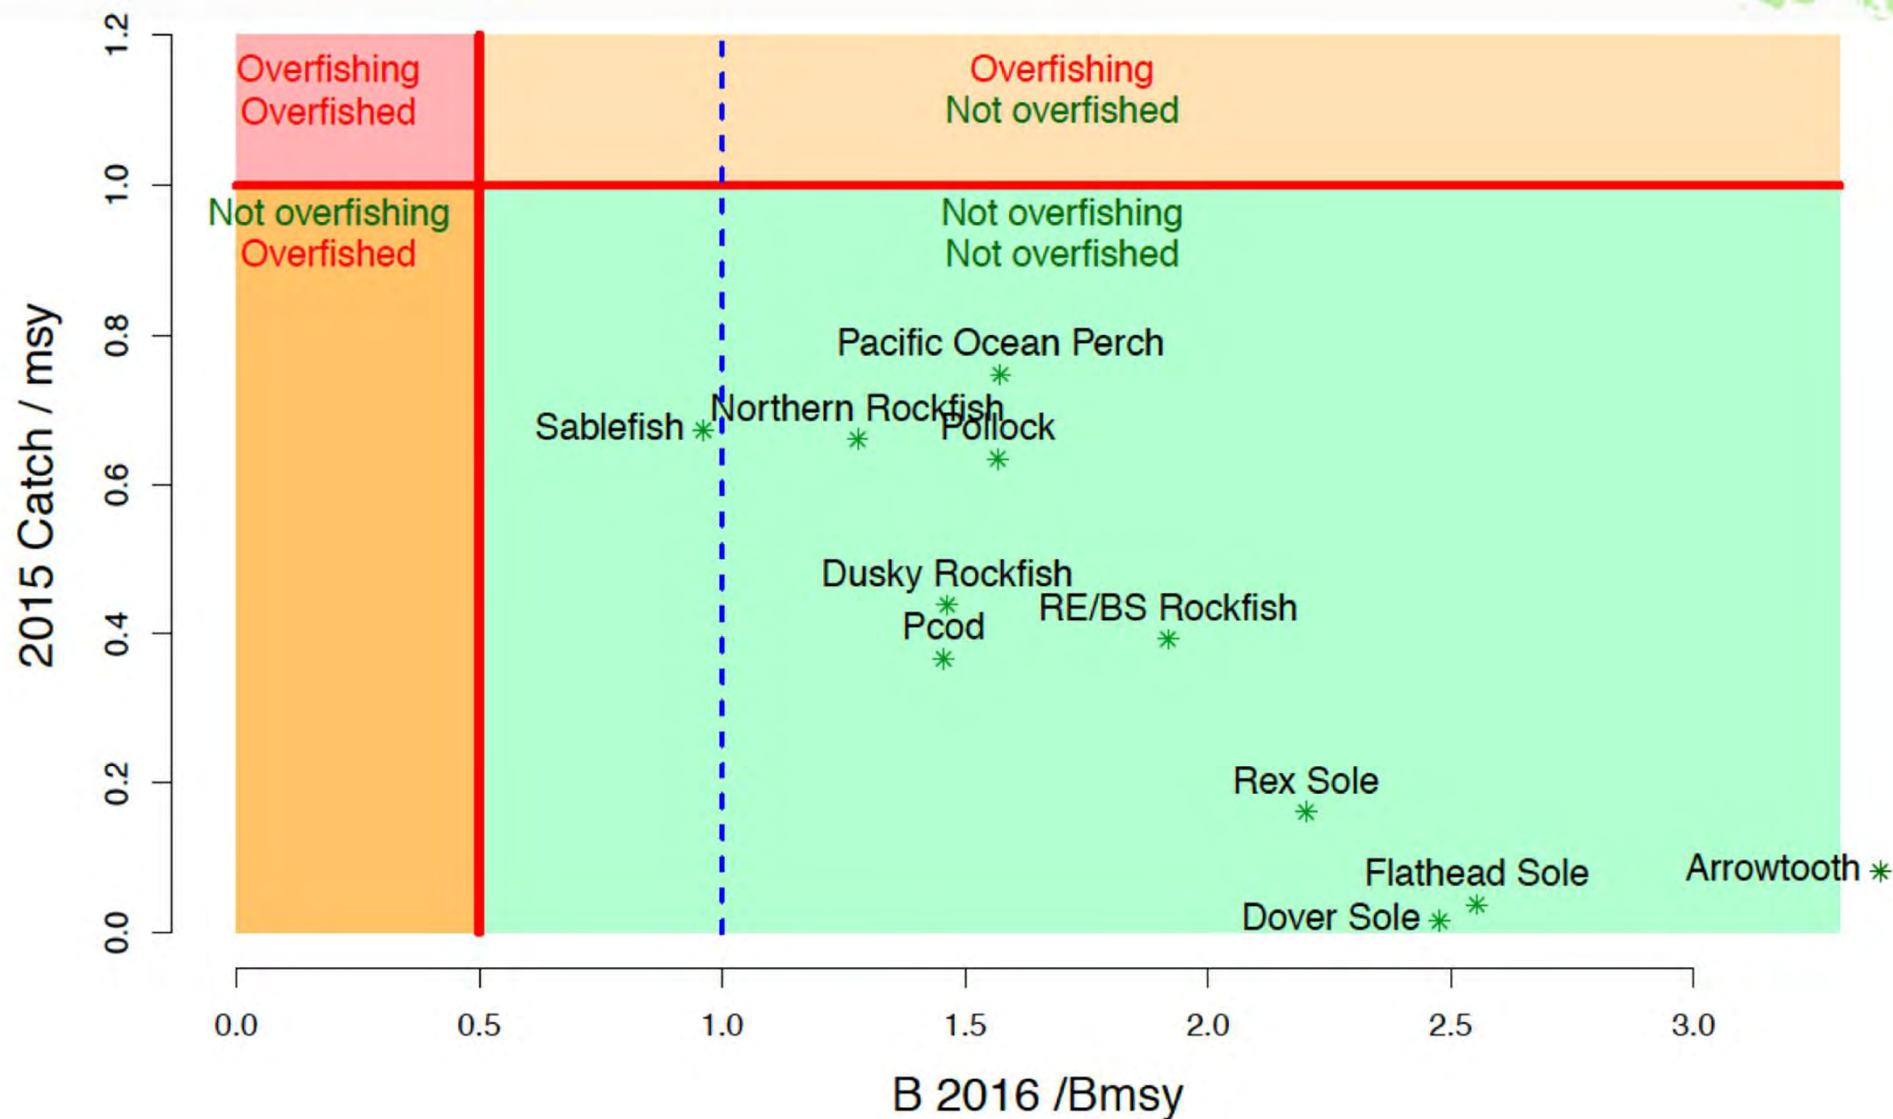

# ABC / TAC

Team recommendations where  
ABC < maximum permissible:

	<b>% of Max Permissible</b>
<b>Pollock</b>	<b>91%</b>
<b>Demersal shelf rockfish</b>	<b>83%</b>

# Stock status summary

# Some GOA Groundfish assessment issues

## The geostatistical approach

- ♦ Applied to Dusky rockfish, was considered promising
- ♦ **The Team recommends that a workgroup or subset of authors investigate applying the geostatistical approach to selected stocks.**

## Multiple indices for apportionment

- ♦ **The Team recommends an evaluation on how best to tailor the RE model to accommodate multiple indices.**

## Area apportionment and RE model

- ♦ Specifies a common “process error”

# Species overviews

1. 2015 ABC/Catch and recommended changes
2. Highlights
  - ◆ New data
  - ◆ Analytic approach (changes)
3. Stock status and trend
4. ABC/OFL
  - ◆ Tier history and recommendations
  - ◆ 2015, 2016 maxABC; recommended ABC

# ABC

Species	2015	ABC		
	Catch	2015	2016	Change
Pollock	162,700	203,934	264,230	up 60,296 (30%)
Pacific Cod	51,497	102,850	98,600	down 4,250 (4%)
Sablefish	10,206	10,522	9,087	down 1,435 (14%)
Flatfish	25,726	108,038	96,103	down 11,935 (11%)
Arrowtooth flounder	1,907	192,921	186,188	down 6,733 (3%)
Rockfish	28,213	39,710	43,706	up 3,996 (10%)
Atka mackerel	1,191	4,700	4,700	same (0%)
Skates	4,350	8,708	8,939	up 231 (3%)

# General comments on flatfish assessments

- Lightly exploited
- Analytical developments:
  - ◆ N & S and “undifferentiated” rock sole models
  - ◆ Dover and flathead sole models full in 2015
    - Stock Synthesis modeling platform (SS3) application
    - Models accepted from 2014
  - ◆ Rex sole assessment conversion completed to SS3
    - Same Tier 5 approach using model estimated adult biomass

# Flatfish ABC's

### Tier 3a, update 2014 assessment model

- ◆ Changes in input data:
  - 2015 survey biomass, 2013 survey ages, updated catch 2014, preliminary catch 2015

### Data trends

- ◆ 2015 survey biomass 2<sup>nd</sup> largest of time series (CV=15%, smallest of time series)

### Model changes:

- ◆ Length-stratified growth, ageing error extension

# POP Survey: Recent Trawl Surveys

# POP – Spawning biomass

# POP – Recruitment

# GOA POP Apportionment

# POP – Summary

- Future looks stable
- Projections indicate increasing abundance
- To do for next full assessment specific to POP:
  - ♦ Investigate alternative trawl survey index
  - ♦ Investigate alternative length bins
  - ♦ Input sample sizes for comp data
  - ♦ Check out fishery selectivity in relation to average depth fished

# GOA Pacific ocean perch

# RE/BS Genetic Study

Project during 2009, 2013 and 2015 trawl surveys

- ◆ Collected length, weight, muscle tissue or fin clip for most RE/BS samples for otoliths
- ◆ Goals to improve at-sea ID, adjust biomass estimates by species, examine species-specific growth

## Results

- ◆ Samples: 895 in 2009, 1,057 in 2013, 1,053 in 2015
- ◆ ID generally improving in field with new field guide
- ◆ RE younger on average than BS (15 vs 20 years) and grow faster with greater max size
- ◆ Continue with analysis for all three surveys

# Harvest Recommendations

Seven species are primarily caught in longline fisheries and unreliable biomass estimates:

- ♦ Canary, China, copper, quillback, rosethorn, tiger and yelloweye rockfish

Time series for Tier 6 presented

- ♦ 1997 – 2007
- ♦ 2013 – 2014
- ♦ Note no data prior to 1991!

# 19. GOA Sculpins (p. 1547)

## Tier 5 complex

- Random effects model applied to time series of trawl survey biomass
- Species specific  $F=M$  to four most abundant species
  - ♦ Bigmouth, great, plain, and yellow irish lord
- Average  $M$  applied to other species
- Biomass trends differed by species
  - ♦ Bigmouth sculpin declined since mid 80's (but "old" survey methods)
- Although largest species in the complex have lowest fecundity
- **Recommendation: examine whether low fecundity and fishing mortality may explain long term trend of bigmouth sculpin**

# GOA sculpin assessment based on 4 most abundant species

## Bigmouth sculpin

## Plain sculpin

## Yellow Irish lord

## Great sculpin

## 20. Sharks (p. 1,569)

- Tier 6
  - ♦ Tier 5 calculation used for spiny dogfish (RE model)
  - ♦  $M=0.097$
- Remaining species Tier 6 based on average historical catch 1997-2007
- Future
  - ♦ Authors presented F rate for spiny dogfish based on demographic model which results in  $F=0.04$
  - ♦ Author and plan team agreed to not implement until trawl survey catchability ( $q$ ) can be resolved
- Complex ABC about 25% lower than 2015
